Urban Drought Bhaswati Ray, Rajib Shaw, 2018-12-30 This book presents water insecurity issues in urban areas while developing a water security index and explores the innovative approaches to water development and management with examples from Asian cities The urban water crisis is a global phenomenon but it is more obvious in the megacities of the developing world Urban drought although not a familiar term will pose a significant threat to humankind in the near future especially in the context of increasing population in cities Many cities are already unable to provide safe clean water for their citizens Some of the world's largest cities depend heavily on groundwater for their water supply It is unlikely that dependence on aquifers which take many years to recharge will be sustainable As urban populations grow water use will need to shift from agriculture to municipal and industrial uses making decisions about allocating between different sectors difficult Inefficient water use practices by households and industries fragmented management of water between sectors and institutions climate induced water shortages environmental degradation of water sources and inadequate use of alternate sources are also issues of major concern Despite recent advances in the literature there exists a considerable gap in attempting an integrated water resource management approach Covering all aspects of urban drought and water insecurity this book is a valuable resource for students researchers academics policy makers and development practitioners

Recent Studies in Geophysical Hazards Mohammed I. El-Sabih, Tad S. Murty, Srinivasan Venkatesh, F. Siccaldi, K. Andah, 2012-12-06 Over the past 20 years the costs of natural disasters have escalated significantly The lives of over 800 million people have been disrupted and the number of catastrophes has nearly quadrupled At present the increasing global threat of natural disasters in spite of our increased knowledge is ominous With the growth in world population the increasing of resources in newly developing areas and the increasing cost and sophistication of engineering structures and technical installations there is an urgent need to seek to understand the potential threats posed by natural hazards and to ascertain the best ways of mitigating their damaging effects To meet this urgent threat the United Nations UN General Assembly in December 22 1989 passed a Resolution which declared the 1990s to be the International Decade for Natural Disaster Reduction IDNDR As a contribution to the decade the International Symposium Hazards 91 was held in Perugia Italy during 4 9 August 1991 The conference was attended by specialists from 34 countries and a total of 110 papers were presented at 20 sessions covering a very broad range of topics which proved to be of significant value for future research The sixteen articles included in this book provide a unique overview of the state of the science in geophysical hazards including climatic atmospheric hydrological and geological hazards Furthermore the results of a panel on the IDNDR and the recommendations

adopted during the meeting are presented at the end of this volume Recent Studies in Geophysical Hazards is thus an excellent reference source for scientists engineers and policy makers
