Environmental Problems: Nature Economy and State Johnston R J,1989 *Environmental Problems* R. J. Johnston,1991-01-01 **Nature, State and Economy** R. J. Johnston,1996-09-12 The author s focus is not on the science of the environment but rather on the science of society Unless we appreciate how society works and in particular how nations operate and the constraints within which they conduct their business we cannot realistically tackle the fundamental issues of sustainable development Solving current environmental problems and preventing the emergence of others can only be achieved by collective action but the limits to this set by contemporary capitalism are many and they are tight This second edition provides an excellent update for students of all disciplines of social science environmental science and environmental studies

Postmodernism and the Environmental Crisis Arran Gare,2006-08-21 Postmodernism and the Environmental Crisis is the only book to combine cultural theory and environmental philosophy In it Arran Gare analyses the conjunction between the environmental crisis the globalisation of capitalism and the disintegration of the culture of modernity It explains the paradox of growing concern for the environment and the paltry achievements of environmental movements Through a critique of the philosophies underlying approaches to the environmental crisis Arran Gare puts forward his own controversial theory of a new postmodern world view This would be the foundation for the environmental movement to succeed Arran Gare s work will be a vital reading for advanced students of environmental studies as well as for environmental philosophers and cultural theorists

Comparative Perspectives on Environmental Policies and Issues Robert A. Dible,2014-01-10 Comparative Perspectives on Environmental Policies and Issues presents tools and concepts about environmental policies in several developed and developing countries It explores a broad survey of ecological modernization theory ecological feminism theory environmental justice theory the concept of sustainability and research on environmental policies Data were collected through surveys interviews and focus groups and are used to analyze social economic and environmental impact on people The book specifically discusses how the earth s basic life supporting capital soils forests species fresh water and oceans is degraded or depleted to provide for human needs and how air pollution and acid precipitation are causing widespread injury to humans forests and crops Realistically over taxing of natural resources and ecological systems throughout the world has promoted economic growth and created increasing opportunities for people while also advancing social injustice The use of the environment to accomplish social and

economic transformation raises fundamental issues for the study of environmental policy and the natural ecological system. As human beings exploit the natural environment to meet present needs, they often will destroy resources needed for the future generations. Thus, environmental policies are enacted to ensure that social and economic impacts of the environment are compatible with the limits of natural systems. Offering an intuitive and crystal clear explanation of the key concepts and principles of environmental policies and sustainable development, this volume is suitable not only for environmental science students but also for instructors, practitioners, researchers, and academics.

Environment Jules Pretty, 2006-06-23. This four-volume set explores the locations where the environment matters most, such as where people are poor, where environments are under threat, such as on frontiers where there are few natural resources remaining, and where industrialization is rampant. It will also explore these concerns at different system levels, from local community to regional, national, and global. It will also explore costs of damage to the very resources on which economies rely, and the values of environmental goods and services, and the controversies surrounding such valuations. It is organized around environment-people interactions, livelihoods, poverty, income, economic growth, environment-people interactions, do people matter, and people-people interactions, collective action, challenges, institutions.

Proceedings of the 2nd International Conference on Democracy and Social Transformation (ICON-DEMOST 2023) Naili Ni'matul Illiyyun, Endang Supriadi, Ririh Megah Safitri, Masrohatun Masrohatun, 2024-01-05. This is an open access book. Faculty of Social and Political Science, State Islamic University Walisongo Semarang has been playing significant roles in building global peace and justice by conducting scientific research and creating a space for academic dialogue and discussion. This goal is in line with our vision to be a Research Faculty based on the unity of sciences for humanity and civilization. As part of the efforts to create a space for academic dialogue at a global level, we organize an international conference which aims to develop scientific knowledge, build institutional capacity, and strengthen international networking. The conference is also held to support State Islamic University Walisongo Semarang in achieving its vision to be an Islamic world-class university. The conference raises the issue of democracy and social transformation to capture the social and political dynamics. The selection of this topic is based on the idea that technological development is becoming a crucial issue within modern society in which people tend to experience alienation within the rapid social and political transformation. Democracy as a political system that ensures transparency, citizen participation, and human rights protection is now under threat. Having the fact that there is a growing tendency of using transactional politics to win political interests, such as the use of money and identity in political processes, therefore, political analysts consider this situation as the regression of democracy. Rapid social and cultural transformation as a consequence of advanced technology creates problems in modern society. On one hand, technology has made the life of people easier. However, on the other hand, the sense of humanity's values and principles is declining. This situation can be observed in the decrease in social solidarity and the rise of individualism. Modernity that values productivity and economic growth has brought a negative impact on the

life of human being and nature The exploitative character of industrialization has created an ecological crisis Advanced information technology has loosened social cohesivity and the rise of instrumental rationality has removed local genius or local wisdom from the life of society Since the ultimate goal of humanity is respecting the dignity of human beings hence bringing back humanity to the center of the development program is crucial especially in the current social and political dynamics In the political context humanity means respecting the basic rights of the citizen and putting them as a subject of political development and not perceiving citizens as only an instrument to win political power Based on the above background this conference is organized The overall goal of the conference is to mainstream humanity in the current social and political change The conference is also expected to be an arena for scholars and experts in social and political science as well as practitioners and policymakers to meet and exchange ideas and perspectives for a better future of our society

Simmons, 2013-01-11 Human society has constructed many varied notions of the environment Scientific information about the environment is often seen as the only worthwhile knowledge This ignores the complexities created by interaction between people and the environment Idealist thinking argues that everything we know is based on a construct of our minds and that all is possible Can both be correct and true Interpreting Nature explores the position of humanity in the environment from the principle that the models we construct are imperfect and can only be provisional Having examined the way in which the natural sciences have interrogated nature the types of data produced and what they mean to us this looks at the environment within philosophy and ethics the social sciences and the arts and analyses their role in the formation of

environmental cognition **The Political Economy of Nature** R. Boardman, 2001-05-16 The Political Economy of Nature draws extensively on current insights from sociology ecology economics and earth science Robert Boardman pools these diverse resources to argue that the investigation of environmental issues raises complex theoretical questions which can only be answered through more sustained links between the natural and social sciences With global issues becoming an increasingly vital part of environmental debates Boardman shows how understanding of ecological problems can be increased in both International Relations and International Political Economy *Nature, Economy and Society* Nilanjan Ghosh, Pranab Mukhopadhyay, Amita Shah, Manoj Panda, 2015-09-01 This book presents an enquiry into the interface between nature economy and society which is still in its early stages notwithstanding the commendable progress and advances made in the field of environmental and natural resource economics within the ever expanding boundaries of economics as a discipline It further delineates the evolution of an inter disciplinary framework for analyzing the status the future goals mechanisms and policy instruments that can help move towards a more ecologically sustainable economically beneficial and socially just future A pre requisite for preparing a comprehensive and coherent framework involves unfolding the multiple layers of interconnectedness between the three systems nature economy and society each of which has its own internal consistencies as well as externalities Against this backdrop the book presents scholarly contributions that focus on four broadly defined building blocks namely i accounting for ecosystems services for life and human well being ii impacts of economic growth on ecosystems iii social norms equity and governance and iv alternative approaches to green and socio economic systems The analyses presented by some of the most eminent national and international scholars address the major environmental challenges that nations around the world face today and consider which specific policy directions at the international and national level are needed In particular the choices India and South Asia now face as development and environment both need to be addressed adequately touch on many of these challenges *The Political Ecology of Forestry in Burma, 1824-1994* Raymond L. Bryant, 1997-08-01 The author examines how the Burmese state has sought to control the country's forest activities and the ways in which groups relying on the forest for their livelihood loggers transnational corporations cultivators peasants have fought such control **The Green State** Robyn Eckersley, 2004-03-05 What would constitute a definitively green state In this important new book Robyn Eckersley explores what it might take to create a green democratic state as an alternative to the classical liberal democratic state the indiscriminate growth dependent welfare state and the neoliberal market focused state seeking she writes to navigate between undisciplined political imagination and pessimistic resignation to the status quo In recent years most environmental scholars and environmentalists have characterized the sovereign state as ineffectual and have criticized nations for perpetuating ecological destruction Going consciously against the grain of much current thinking this book argues that the state is still the preeminent political institution for addressing environmental problems States remain the gatekeepers of the global order and greening the state

is a necessary step Eckersley argues toward greening domestic and international policy and law The Green State seeks to connect the moral and practical concerns of the environmental movement with contemporary theories about the state democracy and justice Eckersley s proposed critical political ecology expands the boundaries of the moral community to include the natural environment in which the human community is embedded This is the first book to make the vision of a good green state explicit to explore the obstacles to its achievement and to suggest practical constitutional and multilateral arrangements that could help transform the liberal democratic state into a postliberal green democratic state Rethinking the state in light of the principles of ecological democracy ultimately casts it in a new role that of an ecological steward and facilitator of transboundary democracy rather than a selfish actor jealously protecting its territory

Environmental Resources A.S. Mather,K. Chapman,2018-10-08 Environmental Resources provides a comprehensive text for undergraduate resource management courses It begins with an introduction to natural and environmental resources and then considers them in the context of politics time and space

States of Nature Stuart George McCook,2010-07-05 The process of nation building in Latin America transformed the relations between the state the economy and nature Between 1760 and 1940 the economies of most countries in the Spanish Caribbean came to depend heavily on the export of plant products such as coffee tobacco and sugar After the mid nineteenth century this model of export led economic growth also became a central tenet of liberal projects of nation building As international competition grew and commodity prices fell over this period Latin American growers strove to remain competitive by increasing agricultural production By the turn of the twentieth century their pursuit of export led growth had generated severe environmental problems including soil exhaustion erosion and epidemic outbreaks of crop diseases and pests This book traces the history of the intersections between nature economy and nation in the Spanish Caribbean through a history of the agricultural and botanical sciences Growers and governments in Venezuela Puerto Rico Cuba Colombia and Costa Rica turned to scientists to help them establish practical and ideological control over nature They hoped to use science to alleviate the pressing environmental and economic stresses without having to give up their commitment to export led growth Starting from an overview of the relationship among science nature and development throughout the export boom of 1760 to 1930 Stuart McCook examines such topics as the relationship between scientific plant surveys and nation building the development of a creole science to address the problems of tropical agriculture the ecological rationalization of the sugar industry and the growth of technocratic ideologies of science and progress He concludes with a look at how the Great Depression of the 1930s changed the paradigms of economic and political development and the role of science and nature in these paradigms
