Expanding Partnerships In Conservation:

Expanding Partnerships in Conservation Jeffrey A. McNeely, 1995-11 Protected areas around the globe national parks wildlife reserves biosphere reserves will prosper only if they are supported by the public the private sector and the full range of government agencies Yet such support is unlikely unless society appreciates the importance of protected areas to its own interest and the protected areas are well managed and contribute to the national welfare in a cost effective way A crucial foundation for success is full cooperation between individuals and institutions Based on papers presented at the IVth World Congress on National Parks and Protected Areas Expanding Partnerships in Conservation explores how new and stronger partnerships can be formed between managers of protected areas and other sectors of society It describes a range of activities currently underway in many parts of the world that are intended to improve conservation efforts at the international national and local levels

Partnerships for Protection Sue Stolton, Nigel Dudley, 2014-01-02 Taking into consideration the fact that many ecosystems are under represented in protected areas of land and water and traditional management methods have often been ineffective this volume describes how improvements can be made Specifically it explores ways of ensuring that all major ecosystems are safeguarded and innovative approaches to conservation involving individuals communities companies and governments The essence of the approach taken in the text is to build partnerships with those who have a stake in the care of land and water resources

Capturing Carbon and Conserving Biodiversity Ian Swingland, 2013-06-17 For decades conservation has been based on the donor driven principle It hasn't worked For centuries environmental pollution or degradation has been addressed by the same attitude the Polluter Pays principle That hasn't worked either The cycle has to stop But while everyone talks about using a market driven approach few know how to do it Faced with the situation on the ground what do you do What is happening How can you engage a system so that it is self sustaining and the people self motivated This study explores how the growing market in carbon can help to conserve carbon based life forms It discusses how reducing global warming and saving biodiversity can both be achieved with the right market conditions The contributors include conservation biologists ecologists biologists economists lawyers community and tribal specialists financial specialists market makers environment specialists climatologists resource managers atmospheric scientists project developers and corporate fund managers

Subcommittee on Interior, Environment, and Related Agencies, 2015 *Global Change and Protected Areas* Guido Visconti, 2001-04-30 The scope of this book is to show that protected areas may be the regions where early signs of the impact of global change can be observed These signs are not limited to physical parameters like temperature precipitation etc but could include changes in the biosphere and in social behavior The book is a collection of papers presented at the meeting Global Change and Protected Areas held in L Aquila Italy in September 1998 It is divided into four sections dealing with the physical evidence for climatic and environmental changes the impact on the biosphere and hydrology and the socio economic implications The last section is a case study on the Abruzzo Region which has the peculiarity among the Italian regions of having dedicated a third of its territory to natural parks Most of the contributions have been prepared for this book and each section is opened by a general review that may also be very useful as a teaching tool The book will be useful for both the researcher and the student This rather interdisciplinary subject is totally new with very few books in print *General Technical Report SE* ,1994 Interior, Environment, and Related Agencies Appropriations for 2016, Part 4 B, 2015, 114-1 ,2015 Forests And

Chirisa, Innocent,2019-05-27 Humanity has extensively exploited natural and physical resources since the Industrial Revolution in Europe A geological era now called the Anthropocene has been coined in environmental and developmental circles to mark the increased domination of humanity on Earth and its resources Today the ecological footprint on the fragile planet continues to increase Mass industrialisation like what China is doing and pushing for is one of the drivers for increased urbanisation that results in increased demand for land It is also the stimulus behind increased deforestation overfishing and pollution As the fragility of the Earth increases global bodies like the Intergovernmental Panel on Climate Change are pushing to reduce the Earth s temperature Human efforts to manage the problem cascade from a global to a regional to a national as well as to much localised scales Missing though are nuanced contributions at national and community levels which this book is an attempt to bridge The nagging sense of responsibility is what this book explores under the label of sustainability ethic As a case study the book examines the use of sustainability ethic in the management of the physical infrastructural and natural resources of Zimbabwe This ethic is built on pillars that include participation of people households in their pursuit for sustainable livelihoods appropriate technology tools and techniques for environmental protection It also hinges on stewardship and structures institutions policies and processes of governance and sustainability

There are also the aspects of ethics laws and indigenous technical knowledge for sustainability capacity building and education plans and programmes for sustainability and population and demographic determinants processes and outcomes for sustainability The book is a timely contribution to an urgent global concern and climate change debate *Interior, Environment, and Related Agencies Appropriations for 2014* United States.
