Environment Planning And Social Development:

Environmental Planning and Sustainable Development Vara Saritha, Manoj Kumar Karnena, 2021-05-02

Constructing an environmentally stable future requires a vision that should be sustainable and sound. It has recently become apparent that ecological problems comprise more than just science and economics, needing an innovative model to supplement traditional decision making. The textbook on environmental planning and sustainable development caters to decision making and will help students, researchers, and academicians. The book disseminates knowledge on aspects like understanding humankind as part of the natural system, appreciating diverse influences of anthropogenic activities on the biological system, human responsibility, and management of natural resources, and understanding sustainability principles towards sustainable development.

Environmental Planning in the Caribbean Janet Momsen, 2016-12-05. Illustrated by case studies from both smaller nations such as Carriacou, Barbados, and St. Lucia, and larger countries including Cuba, Mexico, and Jamaica, this volume brings together leading writers on environmental planning in the Caribbean to provide an interdisciplinary, contemporary critical overview. They argue that context is central to the practice of environmental planning in this region. Rather than focusing on a deterministic colonial geography and history, the contributors propose that whilst a wide range of foreign planning influences can be felt in different contexts, environmental planning emerges in specific settings through the fluid interaction between local and global relations of power. A number of chapters explore the effects of external discourses upon the region, while others examine discourses on Western style democracy and tourism. Other important themes covered include participatory planning, urban planning, physical development planning, pest management, sustainable development, water pollution, conservation, and ecotourism.

Greening China's Urban Governance Jørgen Delman, Yuan Ren, Outi Luova, Mattias Burell, Oscar Almén, 2018-10-24 This volume examines how urban

stakeholders in China particularly city governments and social actors tackle China's urban environmental crisis. The volume's case studies speak to important interdisciplinary themes such as new tools and instruments of urban green governance, climate change and urban carbon consumption, green justice, digital governance, public participation, social media, social movements, and popular protest. It lays out a unique theoretical framework for examining and discussing urban green governance. The case studies are based on extensive fieldwork that examines governance failures, challenges, and innovations from across China, including the largest cities. They show that numerous policies, experiments, and reforms have been put in place in China, mostly on a pragmatic basis, but also as a result of both strategic policy design, civil participation, and protest. The book highlights how China's urban governments bring together diverse programmatic building blocks and instruments from China and elsewhere. Written by experts and researchers from different disciplines at leading universities in China and the Nordic countries in Europe, this volume will be of interest to researchers and students who are interested in Chinese politics, especially urban politics, governance issues, and social movements. Both students and teachers will find the theoretical perspectives and case studies useful in their coursework. The unique green governance perspective makes this a work that is empirically and theoretically interesting for those working with urban political and environmental studies and urbanization worldwide.
