**Resources in Education** ,2001-04      **Food Fears** Alison Blay-Palmer,2016-04-15 The industrial food system of the West is increasingly perceived as problematic The physical social and intellectual distance between consumers and their food stems from a food system that privileges quantity and efficiency over quality with an underlying assumption that food is a commodity rather than a source of nourishment and pleasure In the wake of various food and health scares there is a growing demand from consumers to change the food they eat which in turn acts as a catalyst for the industry to adapt and for alternative systems to evolve Drawing on a wealth of empirical research into mainstream and alternative North American food systems this book discusses how sustainable grass roots local food systems offer a template for meaningful individual activism as a way to bring about change from the bottom up while at the same time creating pressure for policy changes at all levels of government This movement signals a shift away from market economy principles and reflects a desire to embody social and ecological values as the foundation for future growth      **The Fight Against Big Tobacco** Mark Wolfson,2017-07-12 Tobacco control leaders were extremely proud of the movement s achievements in the state of Minnesota In sharing their perspectives and experiences with Mark Wolfson they found a way of making sure that the story would get told His training in social movements had given him an appreciation of the importance of understanding the social infrastructure on which movements are built and Minnesota had built heavily on the infrastructure of health care and public health What became apparent is that the struggle against the tobacco industry in Minnesota involved a close collaborative relationship between government or state actors and the leaders of the tobacco control movement Wolfson develops both of these themes building on the infrastructure of health and state movement interpenetration to understand the emergence growth and outcomes of the tobacco control movement in Minnesota He focuses on the advantages and constraints

associated with these two related themes He goes beyond the case study method to assess the generalizability of the pattern and whether the same sort of movement can be used by other states in North America and even in other countries and their social movements How has the tobacco control movement become such a significant and successful force in shaping public policy social norms and the habits of millions of Americans In this first such detailed study by a sociologist Wolfson documents how the movement has grown over nearly three decades by building an infrastructure of health organizations and health professionals and by fostering relationships with government Rich in survey data extensive interviews and archival sources this text is essential reading for courses in social problems social movements and public health The general reader will also find it engaging given the issues of tobacco use as an addiction and a social problem
