Grounding Cognition The Role Of Perception And Action In Memory Language And Thinking:

Grounding Cognition Diane Pecher, Rolf A. Zwaan, 2005-01-10 One of the key questions in cognitive psychology is how people represent knowledge about concepts such as football or love. Some researchers have proposed that concepts are represented in human memory by the sensorimotor systems that underlie interaction with the outside world. These theories represent developments in cognitive science to view cognition no longer in terms of abstract information processing but in terms of perception and action. In other words, cognition is grounded in embodied experiences. Studies show that sensory perception and motor actions support understanding of words and object concepts. Moreover, even understanding of abstract and emotion concepts can be shown to rely on more concrete embodied experiences. Finally, language itself can be shown to be grounded in sensorimotor processes. This book brings together theoretical arguments and empirical evidence from several key researchers in this field to support this framework.

Embodied and grounded cognition Anna Borghi, Diane Pecher, 2012-01-01 In the last 10-15 years, the embodied and grounded cognition approach has become widespread in all fields related to cognitive science, such as cognitive and social psychology, neuroscience, philosophy, anthropology, computational modelling, and robotics. According to this approach, our cognitive activity is grounded in sensory motor processes and situated in specific contexts and situations. Therefore, in this view, concepts consist of the reactivation of the same neural pattern that is present when we perceive and/or interact with the objects they refer to. In the same way, understanding language would imply forming a mental simulation of what is linguistically described. This simulation would entail the recruitment of the same neurons that are activated when actually acting or perceiving the situation, action, emotion, object, or entity described by language. In the last years, a lot of evidence has been collected in favour of EC and GC view. The aim of this Research Topic is twofold. First, it intends to give an idea of the field of embodied and grounded cognition in its broadness. We therefore intend to invite scientists of different disciplines: anthropology, philosophy, linguistics, cognitive and social psychology, neuroscience, computer science, to submit their proposals. The second aim of this Research Topic is to focus on some challenges that, in our opinion, embodied and grounded theories of cognition need to face. First, we believe that one important challenge for EC and GC views is to account for the way the so-called abstract concepts and abstract words are represented. Evidence on the representation of concrete concepts and words is compelling, whereas evidence on abstract concepts representation is still too scarce and limited to restricted domains. We therefore welcome proposals dealing with this complex issue. Second, we think that embodied and grounded theories of cognition would need to formulate more precise hypotheses and that, in general, within the field, a larger theoretical effort should be made. It is striking that even if a lot of work in the field of computational modelling and robotics starts from an embodied approach, experimental and modelling work on embodied cognition remain somehow separate. We therefore invite researchers to submit papers proposing models which might help to explain phenomena as well as to constrain and specify in more detail the predictions and the claims.

advanced within the framework of EC and GC theories *Stevens' Handbook of Experimental Psychology and Cognitive Neuroscience, Language and Thought* ,2018-02-01 III Language discourse and dialogue reading creativity speech production concepts and categorization culture and cognition reasoning sentence processing bilingualism speech perception spatial cognition word processing semantic memory moral reasoning *Practical Theories and Empirical Practice* Andrea C. Schalley,2012 There is a perceived tension between empirical and theoretical approaches to the study of language Many recent works in the discipline emphasise that linguistics is an empirical science This volume argues for a nuanced view highlighting that theory and practice necessarily and as a matter of fact complement each other in linguistic research Its contributions ranging from experimental studies in psychology via linguistic fieldwork and cross linguistic comparisons to the application of formal and logical approaches to language exemplify the mutual relationship between empirical and theoretical work The volume illustrates how selected topics are addressed by different contributions and methodological stances Topics include the cognitive grounding of language social cognition and the construction of meaning in interaction and closely related pragmatics from a typological perspective and beyond Anyone interested in these topics and more generally in meta theoretical considerations will find great value in this volume *Body Memory, Metaphor and Movement* Sabine C. Koch,Thomas Fuchs,Michela Summa,Cornelia Müller,2012-01-25 Body Memory Metaphor and Movement is an interdisciplinary volume with contributions from philosophers cognitive scientists and movement therapists Part one provides the phenomenologically grounded definition of body memory with its different typologies Part two follows the aim to integrate phenomenology conceptual metaphor theory and embodiment approaches from the cognitive sciences for the development of appropriate empirical methods to address body memory Part three inquires into the forms and effects of therapeutic work with body memory based on the integration of theory empirical findings and clinical applications It focuses on trauma treatment and the healing power of movement The book also contributes to metaphor theory application and research and therefore addresses metaphor researchers and linguists interested in the embodied grounds of metaphor Thus it is of particular interest for researchers from the cognitive sciences social sciences and humanities as well as clinical practitioners **The Psychology of Learning and Motivation** ,2011-04-01 The Psychology of Learning and Motivation series publishes empirical and theoretical contributions in cognitive and experimental psychology ranging from classical and instrumental conditioning to complex learning and problem solving Each chapter thoughtfully integrates the writings of leading contributors who present and discuss significant bodies of research relevant to their discipline Volume 51 includes chapters on such varied topics as emotion and memory interference electrophysiology mathematical cognition and reader participation in narrative Volume 54 of the highly regarded Psychology of Learning and Motivation series An essential reference for researchers and academics in cognitive science Relevant to both applied concerns and basic research

Foundations of Musical Grammar Lawrence M. Zbikowski,2017-08-24 In recent years music theorists have been

increasingly eager to incorporate findings from the science of human cognition and linguistics into their methodology In the culmination of a vast body of research undertaken since his influential and award winning *Conceptualizing Music* OUP 2002 Lawrence M Zbikowski puts forward *Foundations of Musical Grammar* an ambitious and broadly encompassing account on the foundations of musical grammar based on our current understanding of human cognitive capacities Musical grammar is conceived of as a species of construction grammar in which grammatical elements are form function pairs Zbikowski proposes that the basic function of music is to provide sonic analogs for dynamic processes that are important in human cultural interactions He focuses on three such processes those concerned with the emotions the spontaneous gestures that accompany speech and the patterned movement of dance Throughout the book Zbikowski connects cognitive research with music theory for an interdisciplinary audience presenting detailed musical analyses and summaries of the basic elements of musical grammar

Language Learning and Teaching in a Multilingual World Marie-Françoise

Narcy-Combes, Jean-Paul Narcy-Combes, Julie McAllister, Malory Leclère, Grégory Miras, 2019-03-06 The majority of people around the world live in multilingual societies and so it follows that plurilingualism should be considered normal This book proposes a flexible and adaptive framework for designing and implementing language learning environments and tasks which will be useful for practitioners working in classrooms where many languages are already spoken The authors begin by presenting a state of the art review of current research on language learning language teaching and multilingual language acquisition This is followed by a qualitative review of 37 multilingual research projects which are treated as case studies to inform the practical guidance that constitutes the remainder of the book The information and practical framework contained within this book will be of interest to researchers teachers and teacher educators

Instruction Grammar Simon

Kasper, 2015-07-24 Bringing together evidence from natural and social sciences the work introduces the non reductionist Instruction Grammar programme Viewed from within the practicalities of the lifeworld utterances are described as instructions to simulate perceptions and attributions for action The approach provides solutions to long standing philosophical problems of cognitive grammar theories and traditionally puzzling syntactic phenomena

Stories and Minds

Bart Vervaeck, Lars Bernaerts, Dirk de Geest, Luc Herman, 2013-06-01 How do narratives draw on our memory capacity How is our attention guided when we are reading a literary narrative What kind of empathy is triggered by intercultural novels A cast of international scholars explores these and other questions from an interdisciplinary perspective in *Stories and Minds* a collection of essays that discusses cutting edge research in the field of cognitive narrative studies Recent findings in the philosophy of mind and cognitive psychology among other disciplines are integrated in fresh theoretical perspectives and illustrated with accompanying analyses of literary fiction Pursuing such topics as narrative gaps mental simulation in reading theory of mind and folk psychology these essays address fundamental questions about the role of cognitive processes in literary narratives and in narrative comprehension *Stories and Minds* reveals the rich possibilities for research along the

nexus of narrative and mind The Routledge Handbook of Semantics Nick Riemer, 2015-07-30 The Routledge Handbook of Semantics provides a broad and state of the art survey of this field covering semantic research at both word and sentence level It presents a synoptic view of the most important areas of semantic investigation including contemporary methodologies and debates and indicating possible future directions in the field Written by experts from around the world the 29 chapters cover key issues and approaches within the following areas meaning and conceptualisation meaning and context lexical semantics semantics of specific phenomena development change and variation The Routledge Handbook of Semantics is essential reading for researchers and postgraduate students working in this area **Words and the Mind** Barbara Malt, Phillip Wolff, 2010-03-01 The study of word meanings promises important insights into the nature of the human mind by revealing what people find to be most cognitively significant in their experience However as we learn more about the semantics of various languages we are faced with an interesting problem Different languages seem to be telling us different stories about the mind For example important distinctions made in one language are not necessarily made in others What are we to make of these cross linguistic differences How do they arise Are they created by purely linguistic processes operating over the course of language evolution Or do they reflect fundamental differences in thought In this sea of differences are there any semantic universals Which categories might be given by the genes which by culture and which by language And what might the cross linguistic similarities and differences contribute to our understanding of conceptual and linguistic development The kinds of mapping principles structures and processes that link language and non linguistic knowledge must accommodate not just one language but the rich diversity that has been uncovered The integration of knowledge and methodologies necessary for real progress in answering these questions has happened only recently as experimental approaches have been applied to the cross linguistic study of word meaning In Words and the Mind Barbara Malt and Phillip Wolff present evidence from the leading researchers who are carrying out this empirical work on topics as diverse as spatial relations events emotion terms motion events objects body part terms causation color categories and relational categories By bringing them together Malt and Wolff highlight some of the most exciting cross linguistic and cross cultural work on the language thought interface from a broad array of fields including linguistics anthropology cognitive and developmental psychology and cognitive neuropsychology Their results provide some answers to these questions and new perspectives on the issues surrounding them **Action and Language Integration in Cognitive Systems** Angelo Cangelosi, 2012-07-12 Recent theoretical and experimental research on action and language processing in humans and animals clearly demonstrates the strict interaction and co dependence between language and action This has been demonstrated in neuroscientific investigations e g Cappa Pulvermuller 2003 Rizzolatti Pecher Massera et al 2008 All these studies have important implication both for the understanding of the action basis of cognition in natural and artificial cognitive systems as well as for the design of cognitive and communicative capabilities in robots Cangelosi et al 2005 The journal Frontiers in

Neurorobotics is seeking submissions of new articles in the topic of action and language integration both in natural cognitive systems e g humans and animals and in artificial cognitive agents robots and simulated agents Manuscripts can regard new theoretical and computational investigations as well as new neuroscientific and psychological investigations Review articles in this topic are also welcome

The Cognitive Perspective on the Polysemy of the English Spatial Preposition Over Maria Brenda, 2014-09-18 This volume investigates the English spatial preposition over and prepositions in general frequently regarded as function words with little semantic content and shows that they encode rich and diverse information both grammatical and semantic An important research endeavor which the present study undertakes is an examination of whether the meaning of the preposition over is in fact complex enough for the preposition to be treated as a lexical unit rather than merely a functional one In order to achieve that goal the gathered linguistic material is analyzed first and foremost in terms of its semantic content that is the geometric relations between the trajector and landmark and the functional consequences of such relations The research into the morphology of prepositions reveals a considerable area of overlap between prepositions and adverbs adverbial particles and prefixes as well as nouns verbs and adjectives The discussion of the syntax of prepositions is illustrated with labeled tree diagrams of selected sentences to show how the preposition over and the prepositional phrases it heads are embedded in larger structures of the English sentence An important finding of the present study is the confirmation that the spatial preposition over encodes a broad range of geometrical and functional relations as well as rich grammatical information This book will be of interest to students and researchers interested in semantic and conceptual aspects of prepositions meaning construction human cognition and management of space

Musical Sense-Making Mark Reybrouck, 2020-11-29 Musical Sense Making Enaction Experience and Computation broadens the scope of musical sense making from a disembodied cognitivist approach to an experiential approach Revolving around the definition of music as a temporal and sounding art it argues for an interactional and experiential approach that brings together the richness of sensory experience and principles of cognitive economy Starting from the major distinction between in time and outside of time processing of the sounds this volume provides a conceptual and operational framework for dealing with sounds in a real time listening situation relying heavily on the theoretical groundings of ecology cybernetics and systems theory and stressing the role of epistemic interactions with the sounds These interactions are considered from different perspectives bringing together insights from previous theoretical groundings and more recent empirical research The author s findings are framed within the context of the broader field of enactive and embodied cognition recent action and perception studies and the emerging field of neurophenomenology and dynamical systems theory This volume will particularly appeal to scholars and researchers interested in the intersection between music philosophy and or psychology

Mental States Andrea C. Schalley, Drew Khlentzos, 2007-12-13 Collecting the work of linguists psychologists neuroscientists archaeologists artificial intelligence researchers and philosophers this volume presents a richly varied picture

of the nature and function of mental states Starting from questions about the cognitive capacities of the early hominin *homo floresiensis* the essays proceed to the role mental representations play in guiding the behaviour of simple organisms and robots thence to the question of which features of its environment the human brain represents and the extent to which complex cognitive skills such as language acquisition and comprehension are impaired when the brain lacks certain important neural structures Other papers explore topics ranging from nativism to the presumed constancy of categorization across signed and spoken languages from the formal representation of metaphor actions and vague language to philosophical questions about conceptual schemes and colours Anyone interested in mental states will find much to reward them in this fine volume

Cognitive Linguistics - Key Topics Ewa Dąbrowska,Dagmar Divjak,2019-07-08 The key topics discussed in this book illustrate the breadth of cognitive linguistic research and include semantic typology space fictive motion argument structure constructions and prototype effects in grammar New themes such as individual differences emergence and default non salient interpretations also receive coverage

Bloomsbury Semiotics Volume 2: Semiotics in the Natural and Technical Sciences Jamin Pelkey,Stéphanie Walsh Matthews,2023-01-12 Bloomsbury Semiotics offers a state of the art overview of the entire field of semiotics by revealing its influence on a wide range of disciplinary perspectives With four volumes spanning theory method and practice across the disciplines this definitive reference work emphasizes and strengthens common bonds shared across intellectual cultures and facilitates the discovery and recovery of meaning across fields It comprises Volume 1 History and Semiosis Volume 2 Semiotics in the Natural and Technical Sciences Volume 3 Semiotics in the Arts and Social Sciences Volume 4 Semiotic Movements Written by leading international experts the chapters provide comprehensive overviews of the history and status of semiotic inquiry across a diverse range of traditions and disciplines Together they highlight key contemporary developments and debates along with ongoing research priorities Providing the most comprehensive and united overview of the field Bloomsbury Semiotics enables anyone from students to seasoned practitioners to better understand and benefit from semiotic insight and how it relates to their own area of study or research

Volume 2 Semiotics in the Natural and Technical Sciences presents the state of the art in semiotic approaches to disciplines ranging from mathematics and biology to neuroscience and medicine from evolutionary linguistics and animal behaviour studies to computing finance law architecture and design Each chapter casts a vision for future research priorities unanswered questions and fresh openings for semiotic participation in these and related fields

Toward Robotic Socially Believable Behaving Systems - Volume I Anna Esposito,Lakhmi C. Jain,2016-03-21 This volume is a collection of research studies on the modeling of emotions in complex autonomous systems Several experts in the field are reporting their efforts and reviewing the literature in order to shed lights on how the processes of coding and decoding emotional states took place in humans which are the physiological physical and psychological variables involved invent new mathematical models and algorithms to describe them and motivate these investigations in the light of observable societal changes and needs such as

the aging population and the cost of health care services The consequences are the implementation of emotionally and socially believable machines acting as helpers into domestic spheres where emotions drive behaviors and actions The contents of the book are highly multidisciplinary since the modeling of emotions in robotic socially believable systems requires a holistic perspective on topics coming from different research domains such as computer science engineering sociology psychology linguistic and information communication The book is of interest both to experts and students since last research works on a so complex multidisciplinary topic are described in a neat and didactical scientific language

Contacts and Contrasts in Cultures and Languages Barbara Lewandowska-Tomaszczyk, 2019-02-18 This volume provides descriptions and interpretations of social and cognitive phenomena as well as processes that emerge at the interface of languages and cultures in the context of contrastive and contact linguistics and media discourse Different contexts are explored with rich empirical findings and authentic exemplifying materials The book includes fifteen papers divided into three parts Part 1 addresses conceptual reflection on languages and cultures in contact and contrast while Part 2 focuses on contact linguistics and borrowing Part 3 discusses cultural and linguistic aspects of media discourses
