Growth Factors And Signal Transduction In Development:

Growth Factors and Signal Transduction in Development Marit Nilsen-Hamilton, 1994-06 Describes the interactions of growth factors and their receptors and the subsequent signal transduction pathways that they activate Emphasis is placed on the role of these signals in directing developmental events The contributors provide a mixture of biophysical and biochemical perspectives

Modern Cell Biology: Growth factors and signal transduction in development, 1983 **Analysis of Growth Factor Signaling in Embryos** Malcolm Whitman, Amy Sater, 2006-08-15 Developmental biologists have been driven to investigate growth factor signaling in embryos in order to understand the regulatory mechanisms underlying a given developmental process Thus it is critical to explore the technical methods and experimental designs for growth factor signaling in embryos Focusing on specific pathways or pathway comp

Cell Signaling and Growth Factors in Development Klaus Unsicker, Kerstin Krieglstein, 2006-01-02 Combining a comprehensive treatment of both embryogenesis and organ development in one reference work this is the first handbook to be structured according to organ systems it addresses the functions of all signaling pathways and growth factors important for the development of the embryo and the adult With its focus on vertebrates this volume provides a current overview of the molecular communication regulating such processes as cell division migration and differentiation Additionally sections on developmental disorders and related novel therapeutic strategies highlight applications in molecular medicine

Intercellular Signaling in Development and Disease Edward A. Dennis, Ralph A. Bradshaw, 2011-04-05 Required reading for anyone involved in cell signaling research with articles written and edited by experts in the field This title covers disease states such as lymphoid leukemia breast cancer pulmonary fibrosis systemic sclerosis and inflammatory bowel disease along with up to date research on signaling systems and mutations in transcription factors that provide new targets for treating disease Articles written and edited by experts in the field Thematic volume covering disease states such as lymphoid leukemia breast cancer pulmonary fibrosis systemic sclerosis and inflammatory bowel disease Up to date research on signaling systems and mutations in transcription factors that provide new targets for treating disease

Biology of Growth Factors J. E. Kudlow, 2013-11-09 Growth factors are elaborated to control the growth of cells in such physiological processes as wound healing tissue regeneration and the immune response Abnormal production of these growth factors their receptors or intracellular mediators of their action may lead to disease states including oncogenesis This volume will focus on exciting developments in defining the precise molecular lesions that permit the conversion of controlled proliferative signals to neoplasia on the possible involvement of growth factors in the development of blood vessel diseases as seen in diabetes and atherosclerosis on the altered immune surveillance that leads to autoimmunity and on the fundamental mechanisms by which growth factors signal their target cells We expect that the contents of this volume will help promote understanding of the role of these fundamental biological processes and their alterations in a wide variety of disease states and stimulate new investigations in this important area of

Cell and molecular signaling, and transport pathways involved in growth factor control of synaptic development and function Akira Yoshii, Martha Constantine-Paton, Nancy Y. Ip, 2015-08-31 Brain derived neurotrophic factor BDNF and its receptor tropomyosin receptor kinase B TrkB signaling has been extensively studied for its roles in the central nervous system CNS ranging from cell survival axonal and dendritic growth and synapse formation Intracellular signaling pathways triggered by BDNF activate gene transcription translation post translational functions trafficking of key synaptic proteins and synaptic release mechanism BDNF TrkB signaling mediates long lasting activity modulated synaptic changes on excitatory and inhibitory neurons and plays significant roles in circuit development and modulation Furthermore this pathway is critical for learning memory sensory processing and other cognitive functions and is implicated in neurological and psychiatric diseases In addition to BDNF more recent studies have identified new growth factors that play important roles in the development maturation and maintenance and modulation of synaptic function However details of the cytoplasmic signaling systems downstream of these synaptogenic factors are often less understood than conventional neurotrophin signaling This e Book has collected original studies and review articles that present cellular and molecular mechanisms concerning activity dependent synapse formation and their implications for behavior and brain disorders It is our hope that readers will perceive this volume as a showcase for diversity and complexity of synaptogenic growth factors and will stimulate further studies in this field
