General Technical Report RM. ,1988 **Toward Interactive and Intelligent Decision Support Systems** Yoshikazu Sawaragi,Koichi Inoue,Hiroataka Nakayama,2012-12-06 In the past technological as well as economic forces dominated the evolution of industrial structures these factors have been treated extensively in numerous studies However another major factor which has begun to have a decisive influence on the performance of the chemical industry is technological risk and public and environmental health considerations in particular those related to toxic and hazardous substances used in industrial production processes The issues of controlling process risk waste streams and potential environmental

consequences of accidental or routine release of hazardous chemicals are rapidly gaining in importance vis CI vis narrow economic considerations and are increasingly reflected in national and international legislation In the context of several ongoing R D projects aiming at the development of a new generation of tools for intelligent decision support two related problem areas that have been identified are i Structuring the industry or plant for the minimum cost of production as well as least risk e g toxicity of chemicals involved In this multi criteria framework we seek to resolve the conflict between industrial structure or plant design established by economic considerations and the one shaped by environmental concerns This can be formulated as a design problem for normal production conditions In section 3 1 and 3 2 an approach on how to deal with this problem at the industry and plant level is discussed
