**Higher-Order Components for Grid Programming** Jan Dünneweber, Sergei Gorlatch, 2009-06-24 A major challenge in

grid computing remains the application software development for this new kind of infrastructure Grid application programmers have to take into account several complicated aspects distribution of data and computations parallel computations on different sites and processors heterogeneity of the involved computers load balancing etc Grid programmers thus demand novel programming methodologies that abstract over such technical details while preserving the beneficial features of modern grid middleware For this purpose the authors introduce Higher Order Components HOCs HOCs implement generic parallel distributed processing patterns together with the required middleware support and they are offered to users via a high level service interface Users only have to provide the application specific pieces of their programs as parameters while low level implementation details such as the transfer of data across the grid are handled by the HOCs HOCs were developed within the CoreGRID European Network of Excellence and have become an optional extension of the popular Globus middleware The book provides the reader with hands on experience describing a broad collection of example applications from various fields of science and engineering including biology physics etc The Java code for these examples is provided online complementing the book The expected application performance is studied and reported for extensive performance experiments on different testbeds including grids with worldwide distribution The book is targeted at graduate students advanced professionals and researchers in both academia and industry Readers can raise their level of knowledge about methodologies for programming contemporary parallel and distributed systems and furthermore they can gain practical experience in using distributed software Practical examples show how the complementary online material can easily be adopted in various new projects

**Remote Instrumentation and Virtual Laboratories** Franco Davoli, Norbert Meyer, Roberto Pugliese, Sandro Zappatore, 2010-03-10 Accessing remote instrumentation worldwide is one of the goals of e Science The task of enabling the execution of complex experiments that involve the use of distributed scientific instruments must be supported by a number of different architectural domains which inter work in a coordinated fashion to provide the necessary functionality These domains embrace the physical instruments the communication network interconnecting the distributed systems the service oriented abstractions and their middleware The Grid paradigm or more generally the Service Oriented Architecture SOA viewed as a tool for the integration of distributed resources plays a significant role not only to manage computational aspects but increasingly as an aggregator of measurement instrumentation and pervasive large scale data acquisition platforms In this context the functionality of a SOA allows managing maintaining and exploiting heterogeneous instrumentation and acquisition devices in a unified way by

providing standardized interfaces and common working environments to their users but the peculiar aspects of dealing with real instruments of widely different categories may add new functional requirements to this scenario On the other hand the growing transport capacity of core and access networks allows data transfer at unprecedented speed but new challenges arise from wireless access wireless sensor networks and the traversal of heterogeneous network domains The book focuses on all aspects related to the effective exploitation of remote instrumentation and to the building complex virtual laboratories on top of real devices and infrastructures These include SOA and related middleware high speed networking in support of Grid applications wireless Grids for acquisition devices and sensor networks Quality of Service QoS provisioning for real time control measurement instrumentation and methodology as well as metrology issues in distributed systems *Computational and Data Grids: Principles, Applications and Design* Preve, Nikolaos,2011-09-30 This book provide relevant theoretical frameworks covering the latest empirical research findings in the area of grid computing with a critical perspective bridging the gap between academia and the latest achievements of the computer industry Provided by publisher Grid Computing Barry Wilkinson,2009-09-28 Designed for senior undergraduate and first year graduate students Grid Computing Techniques and Applications shows professors how to teach this subject in a practical way Extensively classroom tested it covers job submission and scheduling Grid security Grid computing services and software tools graphical user interfaces workflow editors **Handbook of Research on Grid Technologies and Utility Computing: Concepts for Managing Large-Scale Applications** Udoh, Emmanuel,Wang, Frank Zhigang,2009-05-31 This book provides a compendium of terms definitions and explanations of concepts issues and trends in grid technology Provided by publisher **Cloud, Grid and High Performance Computing: Emerging Applications** Udoh, Emmanuel,2011-06-30 This book offers new and established perspectives on architectures services and the resulting impact of emerging computing technologies including investigation of practical and theoretical issues in the related fields of grid cloud and high performance computing Provided by publisher Quantitative Quality of Service for Grid Computing: Applications for Heterogeneity, Large-Scale Distribution, and Dynamic Environments Wang, Lizhe,Chen, Jinjun,Jie, Wei,2009-05-31 This book provides research into parallel distributed computing high performance computing and Grid computing Provided by publisher
