   Experience Management Bergmann,2002   Experience Management Ralph Bergmann,2002-08-28 This book deals with experience management in the context of real world applicability and realistic applications A particular focus is given by the requirements that arise in complex problem solving and by the fact that modern experience management must be implemented as Internet based applications Concrete application areas that are discussed in this book are electronic commerce diagnosis of complex technical equipment and electronic design reuse This book explores how experience management can be supported by information technology especially by techniques that stem from knowledge based systems case based reasoning machine learning and process modeling It surveys different methods in a unified terminology and investigates them with respect to application requirements Further the process of application development and maintenance is highlighted pointing out successful practically proven ways for obtaining and operating experience management applications   **Experience Management** Ralph Bergmann,2003-08-02 This book deals with experience management in the context of real world applicability and realistic applications A particular focus is given by the requirements that arise in complex problem solving and by the fact that modern experience management must be implemented as Internet based applications Concrete application areas that are discussed in this book are electronic commerce diagnosis of complex technical equipment and electronic design reuse This book explores how experience management can be supported by information technology especially by techniques that stem from knowledge based systems case based reasoning machine learning and process modeling It surveys different methods in a unified terminology and investigates them with respect to application requirements Further the process of application development and maintenance is highlighted pointing out successful practically proven ways for obtaining and operating experience management applications   **Light-weight Experience Collection in Distributed Software Engineering** Anna Averbakh,2015 Nowadays distributed software development has become more common In a distributed project setting managing experience is even more crucial than in a co located project Problems like ineffective communication lack of awareness and trust and restrictive information flow policies impede experience exchange and raise the overall effort for software engineers to collaborate Moreover sharing experiences is usually not part of the development process and considered additional effort This often leads to failure of the experience management initiative due to a lack of participation This thesis proposes a framework for qualitative and quantitative assessment of light weight experience collection Light weight methods primarily aim at lowering the perceived effort and return a reasonable benefit to the experience bearers This thesis proposes characterizing criteria of light weight experience collection and a measurement system to measure gradations of expected effort and benefit of an experience collection method To support knowledge managers in choosing the appropriate collection method this thesis provides a catalogue of strategies from different categories and areas of application in distributed development projects

establish Lean software company thinking while also exploiting the latest approaches to software measurement A comprehensive company wide measurement approach is exactly what companies need in order to align their activities to the demands of their stakeholders to their business strategy etc With the automatic non invasive measurement approach proposed in this book even small and medium sized enterprises that do not have the resources to introduce heavyweight processes will be able to make their software development processes considerably more Lean The book is divided into three parts Part I Motivation for Lean Software Development explains just what Lean Production means why it can be advantageous to apply Lean concepts to software engineering and which existing approaches are best suited to achieving this Part II The Pillars of Lean Software Development presents the tools needed to achieve Lean software development Non invasive Measurement the Goal Question Metric approach and the Experience Factory Finally Part III Lean Software Development in Action shows how different tools can be combined to enable Lean Thinking in software development The book primarily addresses the needs of all those working in the field of software engineering who want to understand how to establish an efficient and effective software development process This group includes developers managers and students pursuing an M Sc degree in software engineering   Developing Industrial Case-Based Reasoning Applications Ralph Bergmann,Klaus-Dieter Althoff,Sean Breen,Mehmet Göker,Michel Manago,Ralph Traphöner,Stefan Wess,2003-12-22 In just few years case based reasoning has evolved from a research topic studied at a small number of specialized academic labs into an industrial strength technology applied in various fields The INRECA methodology presented in detail in this monograph provides a data analysis framework for developing case based reasoning solutions for successful applications in real world industrial contexts The book is divided into parts on smarter business with case based decision support developing case based applications using the INRECA methodology and using the methodology in various application domains The book provides a self contained introduction to case based reasoning applications that address both R and of course the references have been extended substantially   Knowledge-Based Intelligent Information and Engineering Systems Bogdan Gabrys,2006-10-11 The three volume set LNAI 4251 LNAI 4252 and LNAI 4253 constitutes the refereed proceedings of the 10th International Conference on Knowledge Based Intelligent Information and Engineering Systems KES 2006 held in Bournemouth UK in October 2006 The 480 revised papers presented were carefully reviewed and selected from about 1400 submissions The papers present a wealth of original research results from the field of intelligent information processing **Knowledge-Based and Intelligent Information and Engineering Systems, Part III** Andreas König,Andreas Dengel,Knut Hinkelmann,Koichi Kise,Robert J.
