Availability Engineering and Management for Manufacturing Plant Performance Richard G. Lamb, 1995-03-08 In today's manufacturing environment the integration of commercial production maintenance and engineering functions is a common and crucial goal In this timely volume Richard G Lamb presents a new standard within the enterprise and plant design management Lamb shows readers how to advance the plant's role in enterprise business performance and leadership by most cost effectively achieving the mechanical availability necessary to perform in the face of current events business cycles and industry trends Performance is from the designed and managed reliability and maintainability of its equipment

Process Machinery Fred K. Geitner, Ronald G. Eierman, 2021-11-22 The authors describe a risk based approach to commissioning and start up of process machinery Techniques are provided to quantify the safety risks and risks associated

with machinery failure and estimated impact on start up schedules Examples of defining and quantifying the risks based on the extent of the commissioning effort as a function of criticality of the machinery are offered Also included are numerous directly applicable checklists

Maximizing Machinery Uptime Heinz P. Bloch, Fred K. Geitner, 2006-02-17 The authors use their decades of experience and draw upon real world examples to demonstrate that the application of their techniques provides a basis for equipment management uptime maximization and reduced maintenance costs The text explores reliability assessment techniques such as Failure Mode Effect Analysis and Fault Tree Analysis of commonly encountered rotating machinery These are all highly effective techniques that the engineer can apply to maximize uptime and thereby maximize production and profitability Provides the tools to drastically improve machinery productivity and performance Bridges the gap between the theory of reliability engineering and the practical day to day measures that lead to machinery uptime Authoritative reference for maximizing the uptime of process equipment
