Designing Performance Robert Taliencio, 2004 During the past decade diverse developing countries have introduced radical reforms in their collection of taxes In more than 15 countries traditional tax departments have been granted the status of semiautonomous revenue authorities ARAs which are designed with a number of autonomy enhancing features including self financing mechanisms boards of directors with high ranking public and private sector representatives and sui generis personnel systems Taliencio addresses gaps in the public management and tax administration literatures by closely examining ARA reforms in Kenya Mexico Peru South Africa Uganda and Venezuela from their inception to the early 2000s Using the comparative case study method he tackles three questions First what has motivated the wave of ARA reforms over the past decade The author argues that from a public management perspective reformers intended to use autonomy to enhance bureaucratic performance in low capacity public sectors Second is there a connection between autonomy and performance Focusing on revenue collection compliance management taxpayer services human resource management and administrative costs the author suggests that autonomy is associated with higher levels of performance He also makes the case that higher levels of autonomy are associated with higher levels of performance Third if there is a connection between autonomy and performance which specific design features matter most and why In spite of the popularity of the ARA reform there is no consensus on best practice in organizational design The author offers hypotheses based on the cases about why certain designs work better than others and makes specific recommendations for the next generation of ARA reforms This paper a product of the Poverty Reduction and Economic Management Sector Department East Asia and Pacific Region is part of a larger effort in the Bank to understand under what conditions public sector performance improves World Bank web site index show

Determinants of Value-Added Tax Revenue [eljko Bogeti?, Fareed M. A. Hassan, 1993 Empirical analysis of value added tax revenues on a sample of 34 countries conforms with conventional wisdom from theoretical and case studies The key implication is that for value added tax to provide superior revenues it should be levied in a single rate on as broad a base as possible And tax administration and enforcement must be tough to ensure compliance

Current Challenges in Revenue Mobilization - Improving Tax Compliance International Monetary Fund, 2015-01-29 This paper addresses core challenges that all tax

administrations face in dealing with noncompliance which are now receiving renewed attention Long a priority in developing countries assuring strong compliance has acquired greater priority in countries facing intensified revenue needs and is critical for fairness and statebuilding Series Policy Papers The Elgar Guide to Tax Systems Emilio Albi,Jorge Martinez-Vazquez,2011-01-01 Tax systems have changed considerably in the past three decades These fundamental changes have been the result of economic globalization new political stances and also of developments in public finance thought The chapters in this volume offer a critical review of those changes from the perspectives of tax theory policy and tax administration practice and the political economy of taxation The authors also consider what sort of reforms are worth undertaking in tax policy design tax administration and enforcement and the assignment of sub national taxes The authors in this volume are among the top scholars in the study of public finance The development of tax systems in OECD countries is examined as are various methods of taxation direct versus indirect corporate income tax value added tax and others employed throughout the world The politics of public finance and the institutions used to administer it are also analyzed Reflecting on the influence of the research itself Richard Bird closes the book with a chapter exploring whether or not economic literature has focused on the issues and problems that really matter to policymakers and whether it has influenced the development of tax systems Publisher s website Public Sector Reform in Developing and Transitional Countries Christopher Rees,Farhad Hossain,2013-09-13 Over recent decades decentralization has emerged as a key Public Sector Reform strategy in a wide variety of international contexts Yet despite its emergence as a ubiquitous activity that cuts across disciplinary lines in international development decentralization is understood and applied in many different ways by parties acting from contrary perspectives This book offers a fascinating insight into theory and practice surrounding decentralization activities in the Public Sectors of developing and transitional countries In drawing on the expertise of established scholars the book explores the contexts achievements progress and challenges of decentralization and local governance Notably the contributions contained in this book are genuinely international in nature the chapters explore aspects of decentralization and local governance in contexts as diverse as Ghana Hong Kong India Indonesia Kazakhstan Morocco Tanzania Uganda and Viet Nam In summary by examining the subject of decentralization with reference to specific developing and transitional Public Sector contexts in which it has been practiced this book offers an excellent contribution towards a better understanding of the theory and practice of decentralization and local governance in international settings This book was published as a special double issue of the International Journal of Public Administration International Development Bruce Currie-Alder,Ravi Kanbur,David M. Malone,Rohinton Medhora,2014-02-27 Thinking on development informs and inspires the actions of people organizations and states in their continuous effort to invent a better world This volume examines the ideas behind development their origins how they have changed and spread over time and how they may evolve over the coming decades It also examines how the real life experiences of different countries and organizations have been inspired by and

contributed to thinking on development The extent to which development works depends in part on particular local historical or institutional contexts General policy prescriptions fail when the necessary conditions that make them work are either absent ignored or poorly understood There is a need to grasp how people understand their own development experience If the countries of the world are varied in every way from their initial conditions to the degree of their openness to outside money and influence and success is not centred in any one group it stands to reason that there cannot be a single recipe for development Each chapter provides an analytical survey of thinking about development that highlights debates and takes into account critical perspectives It includes contributions from scholars and practitioners from the global North and the global South spanning at least two generations and multiple disciplines It will be a key reference on the concepts and theories of development their origins evolution and trajectories and act as a resource for scholars graduate students and practitioners
