Generalized Analytic Functions In Fractional Spaces:

   Generalized Analytic Functions in Fractional Spaces N K Bliev,1997-05-19 This book studies the foundations of the general theory of generalized analytic functions in fractional spaces The employment of fractional spaces and embedding theorems support applications of the theory of generalized analytic functions The results obtained are applicable to the theory of singular integral equations boundary value problems for elliptic differential equations functions of a complex variable as well as the theory of plates and shells The book will be of interest to scientific workers and specialists interested in these questions and likewise to advanced students in mechanical engineering faculties   Generalized Analytic Functions I. N. Vekua,2014-07-17 Generalized Analytic Functions is concerned with foundations of the general theory of generalized analytic functions and some applications to problems of differential geometry and theory of shells Some classes of functions and operators are discussed along with the reduction of a positive differential quadratic form to the canonical form Boundary value problems and infinitesimal bendings of surfaces are also considered Comprised of six chapters this volume begins with a detailed treatment of various problems of the general theory of generalized analytic functions as as well as boundary value problems The reader is introduced to some classes of functions and functional spaces with emphasis on functions of two independent variables Subsequent chapters focus on the problem of reducing a positive differential quadratic form to the canonical form basic properties of solutions of elliptic systems of partial differential equations of the first order in a two dimensional domain and some boundary value problems for an elliptic system of equations of the first order and for an elliptic equation of the second order in a two dimensional domain The final part of the book deals with problems of the theory of surfaces and the membrane theory of shells This book is intended for students of advanced courses of the mechanico mathematical faculties postgraduates and research workers   *Functional Analytic Methods In Complex Analysis And Applications To Partial Differential Equations* A S A Mshimba,Wolfgang Tutschke,1995-10-17 These proceedings concentrate on recent results in the following fields of complex analysis complex methods for solving boundary value problems with piecewise smooth boundary data complex methods for linear and nonlinear differential equations and systems of second order and applications of scales of Banach spaces to initial value problems Some problems in higher dimensions such as the unification of global and local existence theorems for holomorphic functions and an elementary approach to Clifford analysis are also discussed Particular emphasis is placed on Symbolic Computation in Complex Analysis and on the new approaches to teach mathematical analysis based on interactions between complex analysis and partial differential equations

   Generalized Analytic Automorphic Forms in Hypercomplex Spaces Rolf S. Krausshar,2004-02-23 This book offers basic theory on hypercomplex analytic automorphic forms and functions for arithmetic subgroups of the Vahlen group in higher dimensional spaces Vector and Clifford algebra valued Eisenstein and Poincar series are constructed within this framework and a detailed description of their analytic and number theoretical properties is provided It establishes explicit relationships

to generalized variants of the Riemann zeta function and Dirichlet L series and introduces hypercomplex multiplication of lattices **Complex Methods for Partial Differential Equations** Heinrich Begehr,A. Okay Celebi,W. Tutschke,2013-12-01 This volume is a collection of manscripts mainly originating from talks and lectures given at the Workshop on Recent Trends in Complex Methods for Par tial Differential Equations held from July 6 to 10 1998 at the Middle East Technical University in Ankara Turkey sponsored by The Scientific and Tech nical Research Council of Turkey and the Middle East Technical University This workshop is a continuation oftwo workshops from 1988 and 1993 at the In ternational Centre for Theoretical Physics in Trieste Italy entitled Functional analytic Methods in Complex Analysis and Applications to Partial Differential Equations Since classical complex analysis of one and several variables has a long tra dition it is of high level But most of its basic problems are solved nowadays so that within the last few decades it has lost more and more attention The area of complex and functional analytic methods in partial differential equations however is still a growing and flourishing field in particular as these methods are not only applied Whithin the framework of holomorphic functions but are also combined with properties of generalized analytic functions This can be seen by the many books which recently were published in this field and also by the proceedings in this ISAAC series and the ISAAC congresses and workshops **Complex Analytic Methods For Partial Differential Equations: An Introductory Text** Heinrich G W Begehr,1994-11-15 This is an introductory text for beginners who have a basic knowledge of complex analysis functional analysis and partial differential equations Riemann and Riemann Hilbert boundary value problems are discussed for analytic functions for inhomogeneous Cauchy Riemann systems as well as for generalized Beltrami systems Related problems such as the Poincar problem pseudoparabolic systems and complex elliptic second order equations are also considered Estimates for solutions to linear equations existence and uniqueness results are thus available for related nonlinear problems the method is explained by constructing entire solutions to nonlinear Beltrami equations Often problems are discussed just for the unit disc but more general domains even of multiply connectivity are involved **Generalized Cauchy-Riemann Systems with a Singular Point** Zafar D Usmanov,2020-04-28 A theory of generalized Cauchy Riemann systems with polar singularities of order not less than one is presented and its application to study of infinitesimal bending of surfaces having positive curvature and an isolated flat point is given The book contains results of investigations obtained by the author and his collaborators Applied Pseudoanalytic Function Theory Vladislav V. Kravchenko,2009-07-21 Pseudoanalytic function theory generalizes and preserves many crucial features of complex analytic function theory The Cauchy Riemann system is replaced by a much more general first order system with variable coefficients which turns out to be closely related to important equations of mathematical physics This relation supplies powerful tools for studying and solving Schr dinger Dirac Maxwell Klein Gordon and other equations with the aid of complex analytic methods The book is dedicated to these recent developments in pseudoanalytic function theory and their applications as well as to multidimensional generalizations It is directed to undergraduates graduate students and

researchers interested in complex analytic methods solution techniques for equations of mathematical physics partial and ordinary differential equations , **Application of Holomorphic Functions in Two and Higher Dimensions** Klaus Gürlebeck,Klaus Habetha,Wolfgang Sprößig,2016-06-20 This book presents applications of hypercomplex analysis to boundary value and initial boundary value problems from various areas of mathematical physics Given that quaternion and Clifford analysis offer natural and intelligent ways to enter into higher dimensions it starts with quaternion and Clifford versions of complex function theory including series expansions with Appell polynomials as well as Taylor and Laurent series Several necessary function spaces are introduced and an operator calculus based on modifications of the Dirac Cauchy Fueter and Teodorescu operators and different decompositions of quaternion Hilbert spaces are proved Finally hypercomplex Fourier transforms are studied in detail All this is then applied to first order partial differential equations such as the Maxwell equations the Carleman Bers Vekua system the Schr dinger equation and the Beltrami equation The higher order equations start with Riccati type equations Further topics include spatial fluid flow problems image and multi channel processing image diffusion linear scale invariant filtering and others One of the highlights is the derivation of the three dimensional Kolosov Mushkelishvili formulas in linear elasticity Throughout the book the authors endeavor to present historical references and important personalities The book is intended for a wide audience in the mathematical and engineering sciences and is accessible to readers with a basic grasp of real complex and functional analysis *Advances in Mathematical Finance* Michael C. place th at Pusan University in Korea in 1993 The preceding 8 conference was th held in Shandong in China in August 2000 The 9 conference of the was the first one which took place above mentioned series of conferences in Vietnam Present trends in Complex Analysis reflected in the present volume are mainly concentrated in the following four research directions 1 Value distribution theory including meromorphic funtions mero morphic mappings as well as p adic functions over fields of finite or zero characteristic and its applications 2 Holomorphic functions in several finitely or infinitely many com plex variables 3 Clifford Analysis i e complex methods in higher dimensional real Euclidian spaces 4 Generalized analytic functions   **Encyclopaedia of Mathematics** Michiel Hazewinkel,2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathe matics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivi sion has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science en gineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques
