

Michael F. Bemis. *Library and Information Science: A Guide to Key Literature and Sources*. Chicago: American Library Association, 2014. 304 pages. ISBN 978-0-8389-1185-3. US\$67.

This is an annotated bibliography of library and information science literature, circa 2000–2012. Michael Bemis outlines his aims: “to collect as much of the available information sources regarding various aspects of the profession as reasonably possible and then to organize them in a logical fashion” (p. xi). Both aims are enormous undertakings, and this is a worthy successor of the *ARBA* (*American Reference Books Annual*) (p. 132).

Nearly 1,600 entries are organized according to Library of Congress Subject Headings (LCSH). Thus, the contents of each chapter are taken to be self-evident (Bemis feels the need to justify the inclusion of chapter 11, “Epistemology and Philosophy,” however, even when he lists a risible three monographs).

The unbalanced nature of this bibliography is exacerbated by the use of LCSH as its organizing device. Indicative of this is “Library Science, History of,” which merits five items, and (without getting into the library/information or **[End Page R4]** science/studies debates) the paucity of entries on information science within this or the “Library Science, General” chapter. It is also unclear why there should be an absence of entries for given subject headings. For example, listing “Biblio-metrics” and then not including a single title from the recent proliferation of basic, practical guides leaves chapter 37 on statistical approaches to information uneven.

While annotations to main entries are effective commentaries on some books’ contents, the heavy US bias affects both items for inclusion and those titles that are selected for more in-depth coverage. The criteria for inclusion (“timeliness,” “authority of resource or author qualifications,” “professional standing,” “special features,” p. xii) are subjective (“in my professional opinion,” p. xii). Users must therefore accept that they are reliant on the compiler’s decisions throughout. This reviewer, without having to consult OCLC WorldCat (p. xi), was able to list further works that match these criteria for each chapter yet are unaccountably missing from this guide.

A paradox of relying on publishers’ catalogues for “additional resources” is that Bemis is unable to judge resources that should be afforded more considered treatment. While his annotations are useful, it arbitrarily sets up a two-tier system of “core resources” and “also-rans,” and because he hasn’t consulted the “additional resources” he cannot address this deficiency.

Coverage of sectors is variable: Corporate librarians will find only a couple of relevant entries; however, school and academic librarians are served extremely well. Environment scanning could have complemented LCSH to ensure more adequate coverage of current interests and practices in library and information science, such as disambiguating cataloguing, classification, and collection management to reflect enhancements, and the expanding range of the “core activities” of information professionals.
