G. Neufeld, M. Ito, 2013-11-11 Welcome to the fourth IFIP workshop on protocols for high speed networks in Vancouver This workshop follows three very successful workshops held in Zurich 1989 Palo Alto 1990 and Stockholm 1993 respectively We received a large number of papers in response to our call for contributions This year forty papers were received of which sixteen were presented as full papers and four were presented as poster papers Although we received many excellent papers the program committee decided to keep the number of full presentations low in order to accommodate more discussion in keeping with the format of a workshop Many people have contributed to the success of this workshop including the members of the program committee who with the additional reviewers helped make the selection of the papers We are thankful to all the authors of the papers that were submitted We also thank several organizations which have

contributed financially to this workshop specially NSERC ASI CICS R UBC MPR Teltech and Newbridge Networks

Architecture and Protocols for High-Speed Networks Otto Spaniol, Andre Danthine, Wolfgang Effelsberg, 1994-10-31
Multimedia data streams will form a major part of the new generation of applications in high speed networks Continuous media streams however require transmission with guaranteed performance In addition many multimedia applications will require peer to multipeer communication Guaranteed performance can only be provided with resource reservation in the network and efficient multipeer communication must be based on multicast support in the lower layers of the network Architecture and Protocols for High Speed Networks focuses on techniques for building the networks that will meet the needs of these multimedia applications In particular two areas of current research interest in such communication systems are covered in depth These are the protocol related aspects such as switched networks ATM MAC layer network and transport layer and the services and applications Architecture and Protocols for High Speed Networks contains contributions from leading world experts giving the most up to date research available It is an essential reference for all professionals engineers and researchers working in the area of high speed networks

Data Communications and their Performance
Serge Fdida, Raif O. Onvural, 2013-06-29 This is the sixth conference in the series which started in 1981 in Paris followed by conferences held in Zurich 1984 Rio de Janeiro 1987 Barcelona 1991 and Raleigh 1993 The main objective of this IFIP conference series is to provide a platform for the exchange of recent and original contributions in communications systems in the areas of performance analysis architectures and applications There are many exciting trends and developments in the communications industry several of which are related to advances in Asynchronous Transfer Mode ATM multimedia services and high speed protocols It is commonly believed in the communications industry that ATM represents the next generation of networking Yet there are a number of issues that has been worked on in various standards bodies government and industry research and development labs and universities towards enabling high speed networks in general and ATM networks in particular Reflecting these trends the technical program of the Sixth IFIP W G 6 3 Conference on Performance of Computer Networks consists of papers addressing a wide range of technical challenges and proposing various state of the art solutions to a subset of them The program includes 25 papers selected by the program committee out of 57 papers submitted

volume presents the proceedings of the Second International Conference and Exhibition on High Performance Computing in Networking HPCN Europe 95 held in Milan Italy in May 1995 with the sponsorship of the CEC The volume contains some 130 revised research papers together with a few invited papers and 16 poster presentations All theoretical aspects of HPCN regarding hardware as well as software are addressed with a certain emphasis on parallel processing The applications oriented papers are devoted to a broad spectrum of problems from computational sciences and engineering including physics material sciences climate and environmental applications CAD numerical algorithms in engineering aerodynamic design etc In total the volume is a monumental documentation of HPCN efforts PUBLISHER S WEBSITE [Transputer Applications and Systems '94](#) A. De Gloria, M. R. Jane, D. Marini, 1994 Proceedings Parallel Computing [High-Performance Networks for Multimedia Applications](#) Andre Danthine, Otto Spaniol, Wolfgang Effelsberg, Domenico Ferrari, 2012-12-06 High Performance Networks for Multimedia Applications presents the latest research on the services and protocols for networks providing the communication support for distributed multimedia applications The need for end to end QoS for these multimedia applications is raising the stakes for a powerful shaping and scheduling in the network adapter It is also creating a need for new services at the ATM layer CBR and VBR being augmented by UBR ABR and GFR which have to be evaluated in the TCP IP environment of today and tomorrow With the pressure of all the new technologies available today the backbone architecture needs to be revisited and the success of the TCP IP must not eliminate the possibility of adding a native ATM access to it Most of the research in communication services such as IntServ DiffServ and Native ATM is driven by the requirements of multimedia systems and this book illustrates the new emphasis by bringing telecommunication and computer communication experts together with application designers This is particularly true for the security issues also addressed here Last but not least modeling techniques and mathematical models are essential to assess the performance of the networks to be built and to evaluate next century scenarios unachievable by a simple scaling of today s solutions High Performance Networks for Multimedia Applications is a collection of high quality research papers and the in depth treatment of the subjects provides interesting and innovative solutions It is an essential reference for telecommunication and computer experts and QoS based application designers It is also a comprehensive text for graduate students in high performance networks and multimedia applications *Next Generation Intelligent Optical Networks* Stamatios Kartalopoulos, 2007-11-24 Optical networks have been in commercial deployment since the early 1980s as a result of advances in optical photonic and material technologies Although the initial deployment was based on silica ber with a single wavelength modulated at low data rates it was quickly demonstrated that ber can deliver much more bandwidth than any other transmission medium twisted pair wire coaxial cable or wireless Since then the optical network evolved to include more exciting technologies gratings optical lters optical multiplexers and optical ampli ers so that today a single ber can transport an unprecedented aggregate data rate that exceeds Tbps and this is not the upper limit yet Thus the ber optic network has been the network of choice and

it is expected to remain so for many generations to come for both synchronous and asynchronous payloads voice data video interactive video games music text and more In the last few years we have also witnessed an increase in network attacks as a result of store and forward computer based nodes These attacks have many malicious objectives harvest someone else's data impersonate another user cause denial of service destroy files and more As a result a new field in communication is becoming important communication networks and information security In fact the network architect and system designer is currently challenged to include enhanced features such as intruder detection service restoration and countermeasures intruder avoidance and so on In all the next generation optical network is intelligent and able to detect and outsmart malicious intruders

Computing Networks Pascale Vicat-Blanc, Brice Goglin, Romaric Guillier, Sebastien Soudan, 2013-02-04 Computing Networks explores the core of the new distributed computing infrastructures we are using today the networking systems of clusters grids and clouds It helps network designers and distributed application developers and users to better understand the technologies specificities constraints and benefits of these different infrastructures communication systems Cloud Computing will give the possibility for millions of users to process data anytime anywhere while being eco friendly In order to deliver this emerging traffic in a timely cost efficient energy efficient and reliable manner over long distance networks several issues such as quality of service security metrology network resource scheduling and virtualization are being investigated since 15 years Computing Networks explores the core of clusters grids and clouds networks giving designers application developers and users the keys to better construct and use these powerful infrastructures
