**Advanced Distributed Systems** Felix F. Ramos, Victor Lrios Rosillo, Herwig Unger, 2005-08-31 It is our pleasure to present the papers accepted and presented at the 5th International School and Symposium on Advanced Distributed Systems ISSADS in this LNCS volume. The symposium was held in the city of Guadalajara, Mexico, from January 24 to 28, 2005. The organization team was composed of members of CINVESTAV Guadalajara, Rostock University in Germany, the CUCEI and CUCEA campuses of Guadalajara University, and Instituto Tecnológico y de Estudios Superiores de Occidente (ITESO). The symposium is already a well established annual meeting at which scientists and people from the industrial field meet and discuss the progress of applications and the theory of distributed systems in a forum during the last week of January. This year more than 250 people from 3 continents attended the conference. Most of them are scientists, teachers, students, and engineers from the local industry. The papers presented in the sessions of the symposium cover not only the subjects of distributed systems from the system level and applications but also contributions from the area of theory and artificial intelligence concepts. These papers were selected out of more than 100 submissions. There was a selection letter in which each paper was evaluated by at least three members of the International Program Committee who came from research institutions of good reputation all over the world.

**Electronic Design Automation for IC System Design, Verification, and Testing** Luciano Lavagno, Igor L. Markov, Grant Martin, Louis K. Scheffer, 2017-12-19 The first of two volumes in the Electronic Design Automation for Integrated Circuits Handbook, Second Edition, *Electronic Design Automation for IC System Design, Verification, and Testing* thoroughly examines system level design, microarchitectural design, logic verification, and testing. Chapters contributed by leading experts authoritatively discuss processor modeling and design tools using performance metrics to select microprocessor cores for integrated circuit (IC) designs; design and verification languages; digital simulation; hardware acceleration and emulation; and much more. New to This Edition: Major updates appearing in the initial phases of the design flow where the level of abstraction keeps rising to support more functionality with lower non-recurring engineering (NRE) costs. Significant revisions reflected in the final phases of the design flow where the complexity due to smaller and smaller geometries is compounded by the slow progress of shorter wavelength lithography. New coverage of cutting edge applications and approaches realized in the decade since publication of the previous edition; these are illustrated by new chapters on high level synthesis; system on chip (SoC) block based design; and back annotating system level models. Offering improved depth and modernity, *Electronic Design Automation for IC System Design, Verification, and Testing* provides a valuable state of the art reference for electronic design automation (EDA) students, researchers, and professionals.

*EDA for IC System Design, Verification, and Testing* Louis Scheffer, Luciano Lavagno, Grant Martin, 2018-10-03 Presenting a comprehensive overview of the design automation algorithms, tools, and methodologies used to design integrated circuits, the *Electronic Design Automation for Integrated Circuits Handbook* is available in two volumes.
