Parks,2017-09-25 The effort to understand personal relationships has traditionally focused on the individual characteristics of participants Personal Relationships and Personal Networks takes this analysis a step further focusing on research linking participants feelings and actions within a given personal relationship to the larger social context surrounding it Author Malcolm R Parks expands on the idea that the initiation development maintenance and dissolution of relationships are inextricably connected to each participant s social network a perspective that allows for a better appreciation of our connection to the world and a greater understanding our significant power as social actors This book

offers a new way to consider basic notions about how relationships form such as how particular people meet and how relationships are started Among many findings the volume demonstrates that individuals in relationships feel closer and generally more connected when they also have a greater amount of contact with the members of each other s personal networks and when they believe that network members support their relationship Additional topics discussed include how this social context model is applicable to different types of relationships how participants interact with network members how social networks are involved in the deterioration of personal relationships and what drives change in relationships Students researchers and professionals in a wide variety of disciplines such as communication psychology sociology anthropology family studies clinical psychology public health nursing education and social work will find this book useful as will anyone seeking to better understand their own personal relationships **Advanced Research in Electronic Devices for Biomedical and mHealth** Rajesh Kumar Kesharwani,Upendra Kumar,Raj K. Narahari,Dinesh Garg,Ramasuri Narayanam,Hastagiri Prakash,2009-04-03 This monograph focuses on exploring game theoretic modeling and mechanism design for problem solving in Internet and network economics For the first time the main theoretical issues and applications of mechanism design are bound together in a single text *From Network Structure to Policy Design in Water Protection* Florence Metz,2017-05-05 The book examines a new concern in water quality policy namely aquatic micropollutants Micropollutants are chemicals detected in small concentrations in waterbodies today originating from pharmaceuticals cosmetics or detergents among others Since the regulation of micropollutants is a fairly new issue it has been largely neglected in social sciences However the search for appropriate solutions is of high political relevance at both the national and international levels with many open questions arising that concern the most adequate governance structures and steering mechanisms Solutions suitable for classical macro pollutants such as nutrients do not necessarily apply to micropollutants because of the diversity of compounds and sources and for technical financial and societal reasons The book addresses this knowledge gap by investigating the steering mechanisms at hand and their prospect for problem solving In this regard the research provides a systematic depiction and comparison of policy designs in place for the reduction of micropollutants in the Rhine basin Moreover the study yields insights into the governance structures in place into actors responsibilities and constellations and policy processes regarding micropollutants The study is furthermore embedded into broader theoretical questions of policy research More precisely this research is a contribution to policy analysis that aims to

achieve more optimal policy results by providing for a better understanding of the nature of policy designs and the social mechanisms behind the choice of them Despite the intrinsic aim of policy analysis at contributing to more optimal policy outcomes there remains a lack of research regarding analytical tools that enable an ex ante assessment of policy designs problem solving abilities To explore such a research path this book proposes a novel index of policy comprehensiveness for quantifying the prospective performance of policy designs in alleviating an underlying policy issue e g reducing pollutants in waters Furthermore the book uncovers the social mechanisms behind policymaking and turns to the question In which social settings is it possible to achieve a comprehensive policy design Compared to purely micro level explanations the advantage of the network approach is that it goes beyond the mere aggregation of policy actors attributes by taking into consideration actors interdependencies In order to take the network approach seriously the study systematically links the structure of a policy network with comprehensive policy designs Network concepts such as coalition structure interconnectedness and belief similarity are employed from policy change research here in order to explore the link between structural network characteristics and comprehensive policy design By studying how network structures affect policy design the book critically examines the explanatory value of the network approach *Machine Learning and Deep Learning Techniques in Wireless and Mobile Networking Systems* K. Suganthi,R. Karthik,G. Rajesh,Peter Ho Chiung Ching,2021-09-13 This book offers the latest advances and results in the fields of Machine Learning and Deep Learning for Wireless Communication and provides positive and critical discussions on the challenges and prospects It provides a broad spectrum in understanding the improvements in Machine Learning and Deep Learning that are motivating by the specific constraints posed by wireless networking systems The book offers an extensive overview on intelligent Wireless Communication systems and its underlying technologies research challenges solutions and case studies It provides information on intelligent wireless communication systems and its models algorithms and applications The book is written as a reference that offers the latest technologies and research results to various industry problems *Wireless Systems and Network Architectures in Next Generation Internet* Matteo Cesana,Luigi Fratta,2006-05-18 This book constitutes the refereed post proceedings of the second international joint workshops on Wireless and Mobility and on New Trends in Network Architectures and Services organized by the European Network of Excellence on Next Generation Internet EURO NGI 2005 The 19 revised full research papers presented together with 1 invited talk are organized in topical sections on wireless solutions QoS support in next generation networks and peer to peer architectures and algorithms **Models and Methods in Social Network Analysis** Peter J. S. ATM and Debit Card Industry</u> Fumiko Hayashi,2010-10 Studies product innovation and firm survival in the U S ATM debit card industry The industry started with a few shared ATM networks in the early 1970s the number of networks grew rapidly until the mid 1980s and then declined sharply A theoretical model is constructed to explain the industry shakeout A major product innovation introducing the point of sale debit function in the mid 1980s played an important role in driving the network consolidation The predictions are tested and confirmed using a novel dataset on network entry exit size location ownership and product choices There was little advantage of being early industry entrants rather large networks had a better chance to adopt the product innovation and survive the shakeout Illus
