Inside Memory:

Memory in Fragments Megan E. O'Neil, 2024-07-02 Here in the US we're having difficult discussions about who we should memorialize the political implications of our statues or what to do with monuments that no longer reflect our ideals In a way this book looks at how the Maya dealt with these and related issues The author explores how the ancient Maya engaged with their history by using reusing altering and burying stone sculptures O'Neil shows for example how the ancient Maya repurposed stelae that were damaged by their enemies In some cases they would break the stelae to signify a change in their status and bury them with others so that the buried monuments connected with those still standing in specific sacred sites Infused with agency the sculptures retained ceremonial meaning O'Neil explores how those breakages and other different human interactions amidst unstable religious political and historical contexts changed the sculptures' lives

Memory in the Wild Brady Wagoner, Ignacio Brescó de Luna, Sophie Zadeh, 2020-07-01 Venturing out of the laboratory into the wild of natural settings it becomes untenable to locate memory strictly in the head Instead memory appears as a materially extended and socially distributed process embedded within culture and history This book explores the complex relations between practices of remembering and the settings in which they are enacted It advances a novel set of concepts developed from ecological cognitive cultural and narrative currents in psychology and further afield to analyze 1 trajectories of autobiographical remembering 2 the relation between individual and collective memory 3 memory and cultural transmission as well as 4 various methodological techniques to investigate memory in the wild

External Memory

Algorithms James M. Abello, 1999 The algorithms involve using techniques from computer science and mathematics to solve combinatorial problems whose associated data require the use of a hierarchy of storage devices The 15 papers discuss such topics as synopsis data structures for massive data sets maximum clique problems in very large graphs concrete software libraries computing on data streams efficient cross trees for external memory efficient schemes for distributing data on parallel memory systems and external memory techniques for iso surface extraction in scientific visualization Annotation copyrighted by Book News Inc Portland OR

Memory's Ghost Philip J. Hilts, 1996-08-02 In an experiment that occurred some forty years ago Henry M's memory was stolen from him during a highly controversial operation performed to cure his

epilepsy Henry has lived in the immediate present ever since unable to connect a past moment with the next incapable of retaining or recalling any physical or emotional experience Philip J Hilts one of the few people to spend time with Henry who is sequestered in a hospital draws on Henry's bizarre situation as well as current cutting edge research into the functions of the brain in a revealing investigation of How an individual's memory is constructed When and why memory fails The efficacy of mnemonic devices The validity of recovered memories Part poetic reflection and philosophical meditation part popular science and investigative journalism Memory's Ghost is an unforgettable journey into the mysteries of the human mind

Superior Memory John M. Wilding, Elizabeth R. Valentine, 1997 This book examines the nature and causal antecedents of superior memory performance The main theme is that such performance may depend on either specific memory techniques or natural superiority in the efficiency of one or more memory processes Chapter 2 surveys current views about the structure of memory and discusses whether common processes can be identified which might underlie general variation in memory ability or whether distinct memory subsystems exist the efficiency of which varies independently of each other Chapter 3 provides a comprehensive survey of existing evidence on superior memory performance It examines techniques which underlie many examples of unusual memory performance and concludes that not all this evidence is explicable in terms of such techniques Relations between memory ability and other cognitive processes are also discussed The remainder of the book describes the authors own studies of a dozen memory experts employing a wide variety of short and long term memory tasks These studies provide a much larger body of data than previously available from studies of single individuals usually restricted to a narrow range of tasks and rarely involving any systematic study of long term retention The authors argue that in some cases unusual memory ability is not dependent on the use of special techniques They develop some objective criteria for distinguishing between subjects who demonstrate natural superiority and those strategists who depend on techniques Natural superiority was characterised by superior performance on a wider range of tasks and better long term retention The existence of a general memory ability was further supported by a factor analysis of data from all subjects omitting those who described highly practised techniques This analysis also demonstrated the independence of initial encoding and retention processes The monograph raises many interesting questions concerning the existence and nature of individual differences in memory ability a previously neglected topic their relation to other cognitive processes and implications for theories concerning the structure of memory
