Inside Case-Based Reasoning Christopher K. Riesbeck,Roger C. Schank,2013-05-13 Introducing issues in dynamic memory and case based reasoning this comprehensive volume presents extended descriptions of four major programming efforts conducted at Yale during the past several years Each descriptive chapter is followed by a companion chapter containing the micro program version of the information The authors emphasize that the only true way to learn and understand any AI program is to program it yourself To this end the book develops a deeper and richer understanding of the content through LISP programming instructions that allow the running modification and extension of the micro programs developed by the authors **Inside Case-based Reasoning** Christopher K. Riesbeck,1989 *Inside Case-Based Explanation* Roger C. Schank,Alex Kass,Christopher K. Riesbeck,2014-02-24 This book is the third volume in a series that provides a hands on perspective on the evolving theories associated with Roger Schank and his students The primary focus of this volume is on constructing explanations All of the chapters relate to the problem of building computer programs that can develop hypotheses about what might have caused an observed event Because most researchers in natural language processing don t really want to work on inference memory and learning issues most of their sample text fragments are chosen carefully to de emphasize the need for non text related reasoning The ability to come up with hypotheses about what is really going on in a story is a hallmark of human intelligence The biggest difference between truly intelligent readers and less intelligent ones is the extent to which the reader can go beyond merely understanding the explicit statements being communicated Achieving a creative level of understanding means developing hypotheses about questions for which there may be no conclusively correct answer at all The focus of the lab during the period documented in this book was to work on getting a computer program to do that The volume adopts a case based approach to the construction of explanations which suggests that the main steps in the process of explaining a given anomaly are as follows Retrieve an explanation that might be relevant to the anomaly Evaluate whether the retrieved explanation makes sense when applied to the current anomaly Adapt the explanation to produce a new variant that fits better if the retrieved explanation doesn t fit the anomaly perfectly

Machine Learning and Data Mining in Pattern Recognition Petra Perner,2003-05-15 This book constitutes the refereed proceedings of the Second International Workshop on Machine Learning and Data Mining in Pattern Recognition MLDM 2001 held in Leipzig Germany in July 2001 The 26 revised full papers presented together with two invited papers were carefully reviewed and selected for inclusion in the proceedings The papers are organized in topical sections on case based reasoning and associative memory rule induction and grammars clustering and conceptual clustering data mining on signals images and spatio temporal data nonlinear function learning and neural net based learning learning for handwriting recognition statistical and evolutionary learning and content based image retrieval Case-Based Learning Janet L. Kolodner,2012-12-06 Case based reasoning means reasoning based on remembering previous experiences A reasoner using

old experiences cases might use those cases to suggest solutions to problems to point out potential problems with a solution being computed to interpret a new situation and make predictions about what might happen or to create arguments justifying some conclusion A case based reasoner solves new problems by remembering old situations and adapting their solutions It interprets new situations by remembering old similar situations and comparing and contrasting the new one to old ones to see where it fits best Case based reasoning combines reasoning with learning It spans the whole reasoning cycle A situation is experienced Old situations are used to understand it Old situations are used to solve a problem if there is one to be solved Then the new situation is inserted into memory alongside the cases it used for reasoning to be used another time The key to this reasoning method then is remembering Remembering has two parts integrating cases or experiences into memory when they happen and recalling them in appropriate situations later on The case based reasoning community calls this related set of issues the indexing problem In broad terms it means finding in memory the experience closest to a new situation In narrower terms it can be described as a two part problem assigning indexes or labels to experiences when they are put into memory that describe the situations to which they are applicable so that they can be recalled later and at recall time elaborating the new situation in enough detail so that the indexes it would have if it were in the memory are identified Case Based Learning is an edited volume of original research comprising invited contributions by leading workers This work has also been published as a special issues of MACHINE LEARNING Volume 10 No 3 **Artificial Intelligence in Medicine** Michel Dojat,Elpida Keravnou,Pedro Barahona,2003-11-11 This book constitutes the refereed proceedings of the 9th Conference on Artificial Intelligence in Medicine in Europe AIME 2003 held in Protaras Cyprus in October 2003 The 24 revised full papers and 26 revised short papers presented together with two invited contributions were carefully reviewed and selected from 65 submissions The papers are organized in topical sections on temporal reasoning ontology and terminology image processing and simulation guidelines and clinical protocols terminology and natural language issues machine learning probabilistic networks and Bayesian models case based reasoning and decision support and data mining and knowledge discovery **Engineering Assets and Public Infrastructures in the Age of Digitalization** Jayantha P.
