Standards for K-12 Engineering Education? National Research Council,Committee on Standards for K-12 Engineering Education,2010-10-28 The goal of this study was to assess the value and feasibility of developing and implementing content standards for engineering education at the K 12 level Content standards have been developed for three disciplines in STEM education science technology and mathematics but not for engineering To date a small but growing number of K 12 students are being exposed to engineering related materials and limited but intriguing evidence suggests that engineering education can stimulate interest and improve learning in mathematics and science as well as improve understanding of engineering and technology Given this background a reasonable question is whether standards would improve the quality and increase the amount of teaching and learning of engineering in K 12 education The book concludes that although it is theoretically possible to develop standards for K 12 engineering education it would be extremely difficult to ensure their usefulness and effective implementation This conclusion is supported by the following findings 1 there is relatively limited experience with K 12 engineering education in U S elementary and secondary schools 2 there is not at present a critical mass of teachers qualified to deliver engineering instruction 3 evidence regarding the impact of standards based educational reforms on student learning in other subjects such as mathematics and science is inconclusive and 4 there are significant barriers to introducing stand alone standards for an entirely new content area in a curriculum already
