## **Engineering Within Ecological Constraints:**

**Engineering Within Ecological Constraints** National Academy of Engineering, 1996-04-05 Engineering within Ecological Constraints presents a rare dialogue between engineers and environmental scientists as they consider the many technical as well as social and legal challenges of ecologically sensitive engineering The volume looks at the concepts of scale resilience and chaos as they apply to the points where the ecological life support system of nature interacts with the technological life support system created by humankind Among the questions addressed are What are the implications of differences between ecological and engineering concepts of efficiency and stability How can engineering solutions to immediate problems be made compatible with long term ecological concerns How can we transfer ecological principles to economic systems The book also includes important case studies on such topics as water management in southern Florida and California and oil exploration in rain forests From its conceptual discussions to the practical experience reflected in case studies this volume will be important to policymakers practitioners researchers educators and students in the fields of engineering environmental science and environmental policy Engineering Within Ecological Constraints National Academy of Engineering, 1996-04-22 Engineering within Ecological Constraints presents a rare dialogue between engineers and environmental scientists as they consider the many technical as well as social and legal challenges of ecologically sensitive engineering The volume looks at the concepts of scale resilience and chaos as they apply to the points where the ecological life support system of nature interacts with the technological life support system created by humankind Among the questions addressed are What are the implications of differences between ecological and engineering concepts of efficiency and stability How can engineering solutions to immediate problems be made compatible with long term ecological concerns How can we transfer ecological principles to economic systems The book also includes important case studies on such topics as water management in southern Florida and California and oil exploration in rain forests From its conceptual discussions to the practical experience reflected in case studies this volume will be important to policymakers practitioners researchers educators and students in the fields of engineering environmental science and environmental policy **The 'Ecosystem Approach' in International Environmental Law** Vito De Lucia, 2019-03-28 The ecosystem approach broadly understood as a legal and governance strategy for integrated environmental and biodiversity management has been adopted within a wide variety of international environmental legal regimes and provides a narrative a policy approach and in some cases legally binding obligations for States to implement what has been called a new paradigm of environmental management In this last respect the ecosystem approach is also often considered to offer an opportunity to move beyond the outdated anthropocentric framework underpinning much of international environmental law thus helping re think law in the Anthropocene Against this background this book addresses the question of whether the ecosystem approach represents a paradigm shift in international environmental law and governance or whether it is in conceptual and operative continuity

with legal modernity This central question is explored through a combined genealogical and biopolitical framework which reveals how the ecosystem approach is the result of multiple contingencies and contestations and of the interplay of divergent and sometimes irreconcilable ideological projects The ecosystem approach this books shows does not have a univocal identity and must be understood as both signalling the potential for a decisive shift in the philosophical orientation of law and the operationalisation of a biopolitical framework of control that is in continuity with and even intensifies the eco destructive tendencies of legal modernity It is however in revealing this disjunction that the book opens up the possibility of moving beyond the already tired assessment of environmental law through the binary of anthropocentrism and ecocentrism

Schipper,2015-04-24 Why did the people of the Zambesi Delta affected by severe flooding return early to their homes or even choose to not evacuate How is the forced resettlement of small scale farmers living along the foothills of an active volcano on the Philippines impacting on their day to day livelihood routines Making sense of such questions and observations is only possible by understanding how the decision making of societies at risk is embedded in culture and how intervention measures acknowledge or neglect cultural settings The social construction of risk is being given increasing priority in understand how people experience and prioritize hazards in their own lives and how vulnerability can be reduced and resilience increased at a local level Culture and Disasters adopts an interdisciplinary approach to explore this cultural dimension of disaster with contributions from leading international experts within the field Section I provides discussion of theoretical considerations and practical research to better understand the important of culture in hazards and disasters Culture can be interpreted widely with many different perspectives this enables us to critically consider the cultural boundedness of research itself as well as the complexities of incorporating various interpretations into DRR If culture is omitted related issues of adaptation coping intervention knowledge and power relations cannot be fully grasped Section II explores what aspects of culture shape resilience How have people operationalized culture in every day life to establish DRR practice What constitutes a resilient culture and what role does culture play in a society s decision making It is natural for people to seek refuge in tried and trust methods of disaster mitigation however culture and belief systems are constantly evolving How these coping strategies can be introduced into DRR therefore poses a challenging question Finally Section III examines the effectiveness of key scientific frameworks for understanding the role of culture in disaster risk reduction and management DRR includes a range of norms and breaking these through an understanding of cultural will challenge established theoretical and empirical frameworks **Resilience in Complex Socioecological Systems** David Bohan,Alex Dumbrell,2019-04-13 Resilience in Complex Socioecological Systems Volume 60 the latest release in the Advances in Ecological Research series includes specific chapters that cover Ecological Resilience Socio economic Resilience in

 Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of  
 twenty one Encyclopedias Ecology is the study of the interrelationships between living organisms and their environment The  
 term ecology was introduced by Ernst Haeckel at the end of the nineteenth century Since that time spectacular advances  
 have been made Much has been learned about the relationship between organisms and environmental factors and about the  
 processes that regulate the abundance and distribution of species The Theme on Ecology with contributions from  
 distinguished experts in the field discusses the Science of Ecology for a Sustainable World The two volumes are aimed at the

 Encyclopedia of Food and Agricultural Sciences Engineering and Technology Resources in the global Encyclopedia of Life  
 Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The mechanization of farming  
 practices throughout the world has revolutionized food production enabling it to maintain pace with population growth  
 except in some less developed countries most notably in Africa Agricultural mechanization has involved the partial or full  
 replacement of human energy and animal powered equipment e g plows seeders and harvesters by engine driven equipment  
 The theme on Agricultural Mechanization and Automation cover six main topics Technology and Power in Agriculture Farm

Resilience in Sewer Reconstruction Zihai Shi,Shizuo Watanabe,Kenichi Ogawa,Hajime Kubo,2017-08-17 Structural Resilience  
 in Sewer Reconstruction From Theory to Practice provides engineers with a balanced mixture of theory and practice Divided  
 into three parts structural resilience is introduced along with different methods and theories that are needed to assess  
 sewerage networks The authors begin with a general overview of resilience and lessons learned then present a  
 comprehensive review of resilience theories in key fields of study The book also introduces major analysis techniques and  
 computational methods for resilience assessment also highlighting sewer reconstruction projects carried out in Tokyo

including the reconstruction and development process for construction methods renovation materials and technical inventions The structural resilience considerations incorporated in various stages of development are discussed in detail Computational examples for assessing structural resilience in the renovated sewer system in Tokyo are also shown with final chapters summarizing structural resilience theories and areas for future study Provides a comprehensive review of resilience theories and practices in key fields of study Presents a detailed study of the structural resilience approach to sewer reconstruction in Tokyo also including case studies of overseas projects Includes a systematic presentation of structural resilience theories Covers rich case studies on various issues in sewerage systems for qualitative and quantitative resilience evaluation

*The Smartness Mandate* Orit Halpern, Robert Mitchell, 2023-01-10 Over the last half century smartness the drive for ubiquitous computing has become a mandate a new mode of managing and governing politics economics and the environment Smart phones Smart cars Smart homes Smart cities The imperative to make our world ever smarter in the face of increasingly complex challenges raises several questions What is this smartness mandate How has it emerged and what does it say about our evolving way of understanding and managing reality How have we come to see the planet and its denizens first and foremost as data collecting instruments In *The Smartness Mandate* Orit Halpern and Robert Mitchell radically suggest that smartness is not primarily a technology but rather an epistemology Through this lens they offer a critical exploration of the practices technologies and subjects that such an understanding relies upon above all artificial intelligence and machine learning The authors approach these not simply as techniques for solving problems of calculations but rather as modes of managing life human and other in terms of neo Darwinian evolution distributed intelligences and resilience all of which have serious implications for society politics and the environment The smartness mandate constitutes a new form of planetary governance and Halpern and Mitchell aim to map the logic of this seemingly inexorable and now naturalized demand to compute to illuminate the genealogy of how we arrived here and to point to alternative imaginaries of the possibilities and potentials of smart technologies and infrastructures

**Environmental Planning in Context** Iain White, 2017-08-24 This innovative introduction to environmental planning is designed for an international readership Each of the book's chapters focuses on a key question in environmental planning and works through principles which are appropriate in any national context Case studies from around the world show how the principles apply in practice Routledge

Handbook of Sustainable and Resilient Infrastructure Paolo Gardoni, 2018-12-17 To best serve current and future generations infrastructure needs to be resilient to the changing world while using limited resources in a sustainable manner Research on and funding towards sustainability and resilience are growing rapidly and significant research is being carried out at a number of institutions and centers worldwide This handbook brings together current research on sustainable and resilient infrastructure and in particular stresses the fundamental nexus between sustainability and resilience It aims to coalesce work from a large and diverse group of contributors across a wide range of disciplines including engineering technology and

informatics urban planning public policy economics and finance Not only does it present a theoretical formulation of sustainability and resilience but it also demonstrates how these ideals can be realized in practice This work will provide a reference text to students and scholars of a number of disciplines *Rethinking the Law of Private Property* Jan G. Laitos, 2025-07-15 In *Rethinking the Law of Private Property* eminent legal scholars consider how private property rights might be transformed and realigned to better cope with modern challenges They rethink current paradigms around private property and natural resource ownership in light of police power regulations health rules and expanded land use regulations

**The Role of Customary Law in Sustainable Development** Peter Orebech, Fred Bosselman, Jes Bjarup, David Callies, Martin Chanock, Hanne Petersen, 2005 For many nations a key challenge is how to achieve sustainable development without a return to centralized planning Using case studies from Greenland Hawaii and northern Norway this 2006 book examines whether bottom up systems such as customary law can play a critical role in achieving viable systems for managing natural resources Customary law consists of underlying social norms that may become the acknowledged law of the land The key to determining whether a custom constitutes customary law is whether the public acts as if the observance of the custom is legally obligated While the use of customary law does not always produce sustainability the study of customary methods of resource management can produce valuable insights into methods of managing resources in a sustainable way **Resilient**

**and Responsible Smart Cities** Hassan Abdalla, Hugo Rodrigues, Vimal Gahlot, Mohammad Salah Uddin, Tomohiro Fukuda, 2022-03-01 This book aims to establish a community with attention to land use to achieve sustainable development and meet the needs of today's society Urban planning depends on engineering architectural social and political pillars It pursues this by proposing solutions regulating environmental pollution and non sustainable use of available resources It showcases and even triggers further debate about connections between sustainable development urban planning and technology in hopes of achieving sustainable development models that sustain urban expansion and shape cities that improve the overall quality of life It views urban planning and development as vital fields that ensure the application of revolutionary approaches with new materials and processes incorporated in the most efficient manner **Living in Integrity** Laura

Westra, 1998 This innovative book takes a new look at environmental ethics and the need for ecological and biological integrity Laura Westra explores the necessity for radical alteration not only of interpersonal ethics but also of social institutions and public policy In the process Westra denies the validity of majority rule in environmentally ethical concerns Issues discussed in the book include the link between ecological integrity and human health an environmental evaluation of business and technology biotechnology and transgenics in agriculture and aquaculture and the environmental ethics of the ancient Greeks and Kant *Living in Integrity* is a valuable book for philosophers and environmentalists alike Stochastic Modeling in Range Management Amitrajeet A. Batabyal, 2004 Although rangelands are one of the most important ecological economic systems on our planet researchers thus far have paid scant attention to the study of range management from a

theoretical perspective As such this book provides a systematic approach to the theoretical study of range management under uncertainty In particular the book demonstrates how the theory of stochastic processes and the techniques of stochastic modelling can be used to construct and analyse theoretical models of jointly determined rangelands and thereby shed light on the task of range management Because specialised grazing systems involving the rotation of animals between pastures have been a major focus of range managers since the 1950s this book pays considerable attention to questions that arise when specialised grazing systems such as short duration grazing are used to manage rangelands Specific issues that are analysed in this book include the optimal number of paddocks in short duration grazing the steady state distribution of animals in short duration grazing Also the effect of potential irreversibilities the choice between the stocking rate and time herding in ranch operations and the role of time in range management is discussed *Tourism and Resilience* C. Michael Hall, Girish Prayag, Alberto Amore, 2017-11-15 This book is the first authored overview of resilience in tourism and its relationship to the broader resilience literature The volume takes a multi scaled approach to examine resilience at the individual organisation and destination levels and with respect to the wider tourism system It covers the different approaches to understanding resilience the ecological and engineering approaches and identifies issues with their understanding and application The book connects issues of resilience to related key concepts such as vulnerability adaptation networks systems change and social capital It is designed to be an upper level undergraduate and postgraduate primer on resilience in a tourism context and will be of interest to tourism researchers in planning development geography impacts sustainability disaster management and environmental studies Historical Environmental Variation in Conservation and Natural Resource Management John A. Wiens, Gregory D. Hayward, Hugh D. Safford, Catherine Giffen, 2012-09-04 In North America concepts of Historical Range of Variability are being employed in land management planning for properties of private organizations and multiple government agencies The National Park Service U S Fish Wildlife Service Bureau of Land Management U S Forest Service and The Nature Conservancy all include elements of historical ecology in their planning processes Similar approaches are part of land management and conservation in Europe and Australia Each of these user groups must struggle with the added complication of rapid climate change rapid land use change and technical issues in order to employ historical ecology effectively Historical Environmental Variation in Conservation and Natural Resource Management explores the utility of historical ecology in a management and conservation context and the development of concepts related to understanding future ranges of variability It provides guidance and insights to all those entrusted with managing and conserving natural resources land use planners ecologists fire scientists natural resource policy makers conservation biologists refuge and preserve managers and field practitioners The book will be particularly timely as science based management is once again emphasized in United States federal land management and as an understanding of the potential effects of climate change becomes more widespread among resource managers Additional resources for this book

Jørgensen, 2000-09-21 This is a much revised and expanded version of the author's previous book *Principles of Environmental Science* 1988 also published by Elsevier It incorporates new tools such as ecotechnology cleaner technology life cycle analysis and environmental risk assessment which have changed environmental management strategy radically over the last decade Sven Jørgensen has worked at the Royal Danish School of Pharmacy as Professor in Environmental Chemistry since 1965 and has also held the position Professor in Environmental Technology at the Danish Agricultural University since 1978 He is Editor in Chief of Ecological Modelling and Editor of the book series *Developments in Environmental Modelling*
