## **Energy Transducing ATPases Structure And Function:**

*Energy-Transducing ATPases - Structure and Kinetics* Yuji Tonomura, 1986-07-31 Professor Tonomura's book explains at the molecular level how cells use energy harnessed as adenosine triphosphate to perform the fundamental physiological functions such as muscle contraction and the active transport of cations. A well written interesting account of the structure and kinetics of energy transducing ATPases. *Structure and Function of Energy-transducing Membranes* Edward Charles Slater, Koninklijke Nederlandse Akademie van Wetenschappen. Commissie voor de Biochemie en de Biofysica, 1977

**Structure and Properties of Cell Membrane Structure and Properties of Cell Membranes** Gheorghe Benga, 2018-01-18 This book provides in depth presentations in membrane biology by specialists of international repute. The volumes examine world literature on recent advances in understanding the molecular structure and properties of membranes, the role they play in cellular physiology and cell-cell interactions, and the alterations leading to abnormal cells. Illustrations, tables, and useful appendices complement the text. Those professionals actively working in the field of cell membrane investigations as well as biologists, biochemists, biophysicists, physicians, and academicians will find this work beneficial.

**Energy Transduction in Biological Membranes** William A. Cramer, David B. Knaff, 2012-12-06 Energy Transduction in Biological Membranes was primarily designed for graduate courses in bioenergetics. Not only does it discuss basic principles and concepts central to modern membrane biochemistry, biophysics, and molecular biology, but also 1) the components and pathways for electron transport and hydrogen ion translocation, and 2) the utilization of electrochemical ion gradients. The book is unique in presenting a comparative treatment of respiratory and photosynthetic energy transduction and in using protein sequence data coupled with physical concepts to discuss the mechanisms of energy transducing proteins.

Origin and Evolution of Biological Energy Conversion Herrick Baltscheffsky, 1996-12-17 Three dimensional modeling and sequence data on protein RNA and DNA have contributed to the recent elucidation of evolutionary pathways in biological energy conversion and have allowed a new understanding of the molecular interrelationships between bacterial, plant, and animal systems. This timely book represents the latest information in the various subfields of biological energy conversion and presents the latest evolutionary picture. Written and edited by the leading authorities in this area, this title provides essential information for biochemists and biologists.

Cramer, Toivo Kallas, 2016-06-14 An Introduction that describes the origin of cytochrome notation also connects to the history of the field focusing on research in England in the pre World War II era The start of the modern era of studies on structure function of cytochromes and energy transducing membrane proteins was marked by the 1988 Nobel Prize in Chemistry given to J Deisenhofer H Michel and R Huber for determination of the crystal structure of the bacterial photosynthetic reaction center An ab initio logic of presentation in the book discusses the evolution of cytochromes and hemes followed by theoretical perspectives on electron transfer in proteins and specifically in cytochromes There is an extensive description of the molecular structures of cytochromes and cytochrome complexes from eukaryotic and prokaryotic sources bacterial plant and animal The presentation of atomic structure information has a major role in these discussions and makes an important contribution to the broad field of membrane protein structure function

*Membrane Structure and Mechanisms of Biological Energy Transduction* J. Avery, 2012-12-06 The problem of electron transfer phosphorylation was first formulated in 1939 by Belitser and Tsibakova I who introduced the P/O criterion and showed that this ratio is more than 1 The authors noted that such a high value of the phosphorylation coefficient suggests a fundamental difference in the mechanisms of ATP formation coupled with respiration and glycolysis since in the latter case the amount of the ATP synthesized is equal to that of the substrate utilized A lot of hypothetical schemes were put forward to explain the nature of coupling between electron transfer and phosphorylation but none of them solved the problem Only quite recently one hypothetical scheme of energy coupling viz Mitchell's chemiosmotic concept 2/3 was supported by experimental data which allow us to prefer it to alternative possibilities In this paper I shall try to substantiate the statement that oxidation and phosphorylation can be coupled via a membrane potential as was postulated by Mitchell
