Hilbert Space Approach to Some Classical Transforms Rainer Picard,1989 [Hilbert Space Approach to Some Classical Transforms](#) Rainer H. Picard,1989 **Hilbert Space Approach to Some Classical Transforms** Rainer Picard,2018-03-30 **A Primer for a Secret Shortcut to PDEs of Mathematical Physics** Des McGhee,Rainer Picard,Sascha Trostorff,Marcus Waurick,2020-08-24 This book presents a concise introduction to a unified Hilbert space approach to the mathematical modelling of physical phenomena which has been developed over recent years by Picard and his co workers The main focus is on time dependent partial differential equations with a particular structure in the Hilbert space setting that ensures well posedness and causality two essential properties of any reasonable model in mathematical physics or engineering However the application of the theory to other types of equations is also demonstrated By means of illustrative examples from the straightforward to the more complex the authors show that many of the classical models in mathematical physics as well as more recent models of novel materials and interactions are covered or can be restructured to be covered by this unified Hilbert space approach The reader should require only a basic foundation in the theory of Hilbert spaces and operators therein For convenience however some of the more technical background requirements are covered in detail in two appendices The theory is kept as elementary as possible making the material suitable for a senior undergraduate or master s level course In addition researchers in a variety of fields whose work involves partial differential equations and applied operator theory will also greatly benefit from this approach to structuring their mathematical models in order that the general theory can be applied to ensure the essential properties of well posedness and causality

Solution Sets of Differential Equations in Abstract Spaces Robert Dragoni,Paolo Nistri,Pietro Zecca,Jack W Macki,1996-04-03 This book presents results on the geometric topological structure of the solution set S of an initial value problem $x' = f(t, x)$, $x(0) = x_0$ when f is a continuous function with values in an infinite dimensional space A comprehensive survey of existence results and the properties of S e.g when S is a connected set a retract an acyclic set is presented The authors also survey results on the properties of S for initial value problems involving differential inclusions and for boundary value problems This book will be of particular interest to researchers in ordinary and partial differential equations and some workers in control theory **Numerical Analysis 1993** D.F. Griffiths,G.A. Watson,2020-10-07 This volume contains invited papers presented at the 15th Dundee Biennial Conference on Numerical Analysis held at the University of Dundee in June of 1993 The Dundee Conferences are important events in the numerical analysis calendar and the papers published here represent accounts of recent research work by leading numerical analysts covering a wide range of fields of interest The book is a valuable guide to the direction of current research in many areas of numerical analysis It will be of particular interest to graduate students and research workers concerned with the theory and application of numerical methods for solving ordinary and partial differential equations [Harmonic Maps Into Homogeneous Spaces](#) Malcolm Black,2018-05-04

Harmonic maps and the related theory of minimal surfaces are variational problems of long standing in differential geometry. Many important advances have been made in understanding harmonic maps of Riemann surfaces into symmetric spaces. In particular twistor methods construct some and in certain cases all such mappings from holomorphic data. These notes develop techniques applicable to more general homogeneous manifolds in particular a very general twistor result is proved. When applied to flag manifolds this wider viewpoint allows many of the previously unrelated twistor results for symmetric spaces to be brought into a unified framework. These methods also enable a classification of harmonic maps into full flag manifolds to be established and new examples are constructed. The techniques used are mostly a blend of the theory of compact Lie groups and complex differential geometry. This book should be of interest to mathematicians with experience in differential geometry and to theoretical physicists.

Common Zeros of Polynomials in Several Variables and Higher Dimensional Quadrature Yuan Xu, 2020-12-18
 Presents a systematic study of the common zeros of polynomials in several variables which are related to higher dimensional quadrature.

The author uses a new approach which is based on the recent development of orthogonal polynomials in several variables and differs significantly from the previous ones based on algebraic ideal theory Featuring a great deal of new work new theorems and in many cases new proofs this self contained work will be of great interest to researchers in numerical analysis the theory of orthogonal polynomials and related subjects

Backward Stochastic Differential Equations N El Karoui, Laurent Mazliak, 1997-01-17 This book presents the texts of seminars presented during the years 1995 and 1996 at the Universit Paris VI and is the first attempt to present a survey on this subject Starting from the classical conditions for existence and unicity of a solution in the most simple case which requires more than basic stochartic calculus several refinements on the hypotheses are introduced to obtain more general results

Dynamical Systems Rafael Labarca, R Bamon, L Lewowicz, J Palis, 1993-02-22 In at least five countries in Latin America high level research in the field in taking place To stimulate this development both at home and abroad Chilean mathematicians have been promoting international meetings like the III International School of Dynamical Systems which took place at the Universidad de Santiago de Chile Santiago in 1990 A number of distinguished mathematicians were present at the meeting side by side with younger people interested in the subject Several of the participants submitted original contributions to these proceedings of the school The topics of the papers are central to dynamics ergodic theory real and complex foliations fractal dimensions polynomial vector fields hyperbolicity and expansive maps Notes on the ergodic theory of plane billiards are also included This book will be of particular interest to researchers and graduate students working in mathematics particularly in ordinary differential equations bifurcation theory and dynamical systems Also those working in mathematical physics and physics
