Laws And Explanation In History:

Laws and Explanation in History William H. Dray, 1957 This book challenges the popular view that the logical structure of explanation in history can in every case be elucidated in terms of subsumption under covering law. It argues that departures from this logical model in ordinary historical writing cannot satisfactorily be explained away as incomplete or defective cases and it endeavours to show how the attempt to do this may lead philosophers to read into explanations offered by historians more than is really intended while at the same time important features of what is intended are missed. In a series of independent but converging arguments some problems raised by the uniqueness of historical events, the rationality of human actions and the logical grammar of casual language are discussed in this connexion and the pragmatic dimension of explanation is also explored. Explanation In The Social Sciences Lee C McIntyre, 2018-10-08 The first full length defense of social scientific laws to appear in the last twenty years this book upholds the prospect of the nomological explanation of human behavior against those who maintain that this approach is impossible impractical or irrelevant. By pursuing an analogy with the natural sciences McIntyre shows that the barriers to nomological inquiry within the social sciences are not generated by factors unique to social inquiry but arise from a largely common set of problems that face any scientific endeavor. All of the most widely supported arguments against social scientific laws have failed largely due to adherence to a highly idealized conception of nomologicality allegedly drawn from the natural sciences themselves and the limited doctrine of descriptivism. Basing his arguments upon a more realistic view of scientific theorizing that emphasizes the pivotal role of redescription in aiding the search for scientific laws McIntyre is optimistic about attaining useful law like explanations of human behavior.

Laws and Explanation in History Dray, William H. Dray, 1970 Logic of Historical Explanation Clayton Roberts, 2010-11-01 Methodology of History Y. Topolski, 2012-12-06 No discipline has been more praised or more criticized than the writing of history. Cioero claimed that history teaches men how to live. Arisotle denied it the very name of science and regarded poetry as the higher wisdom. At various times history has been assigned a commanding or a demeaning status in the hierarchy of sciences. Today one can admire the increasing precision and sophistication of the methods used by historians. On the other hand Thucydides' History of the Peloponnesian War still serves as the ideal model of how to reconstruct the historical past. Even those who deny the possibility of an objective reconstruction of the past would themselves like to be recorded by historians objectively or not. Dislike of history and fear of its verdict are not incompatible with reverence and awe for its practitioners the historians. So man's attitude to history is ambiguous. The controversy about history continues. Widely differing issues are at stake. Historians themselves however are the least engaged in the struggle.

Rarely does a historian decide to open the door of his study and join in the melee about the meaning of history More often he slams it shut and returns to his studies oblivious of the fact that with the passage of time the gap between his scientific work and its audience might widen The historian does not shun the battle he merely chooses his own battleground

Modality and Explanatory Reasoning Boris Kment,2014-09-18 Since the ground breaking work of Saul Kripke David Lewis and others in the 1960s and 70s one dominant interest of analytic philosophers has been in modal truths which concerns the questions of what is possible and what is necessary However there is considerable controversy over the source and nature of necessity In *Modality and Explanatory Reasoning* Boris Kment takes a novel approach to the study of modality that places special emphasis on understanding the origin of modal notions in everyday thought Kment argues that the concepts of necessity and possibility originate in a common type of thought experiment counterfactual reasoning that allows us to investigate explanatory

connections This procedure is closely related to the controlled experiments of empirical science Necessity is defined in terms of causation and other forms of explanation such as grounding the relation that connects metaphysically fundamental facts to non fundamental ones Therefore contrary to a widespread view explanation is more fundamental than modality The study of modal facts is important for philosophy not because these facts are of much metaphysical interest in their own right but because they provide evidence about explanatory relationships In the course of developing this position the book offers new accounts of possible worlds counterfactual conditionals essential truths and their role in grounding and a novel theory of how counterfactuals relate to causation and explanation
