Feature Extraction, Construction and Selection Huan Liu, Hiroshi Motoda, 2012-12-06 There is broad interest in feature extraction construction and selection among practitioners from statistics pattern recognition and data mining to machine learning Data preprocessing is an essential step in the knowledge discovery process for real world applications This book compiles contributions from many leading and active researchers in this growing field and paints a picture of the state of art techniques that can boost the capabilities of many existing data mining tools The objective of this collection is to increase the awareness of the data mining community about the research of feature extraction construction and selection which are currently conducted mainly in isolation This book is part of our endeavor to produce a contemporary overview of modern solutions to create synergy among these seemingly different branches and to pave the way for developing meta systems and novel approaches Even with today s advanced computer technologies discovering knowledge from data can still be fiendishly hard due to the characteristics of the computer generated data Feature extraction construction and selection are a set of techniques that transform and simplify data so as to make data mining tasks easier Feature construction and selection can be viewed as two sides of the representation problem

Progress in Artificial Intelligence — IBERAMIA 98 Helder Coelho, 2003-07-31 When in October 1996 in Cholula Puebla Mexico I took charge of organizing the scientific program of the next Ibero American Congress on Artificial Intelligence IBERAMIA 98 I bet on a couple of ideas First I adopted the spirit of the Portuguese adventurers to get the Sixth Congress on a truly international track In order to attain this aim I needed to

convince everybody that the Ibero American AI community had improved over the years and attained a very good level in what concerns individuals. Second I brought my colleagues beside me so that we were able to collect sufficient excellent papers without destroying the pioneering spirit of those who first inaugurated the Congress. Getting together to find out what is in progress in the vast region in which Latin languages Portuguese and Spanish are spoken attracting others to exchange ideas with us and by doing this advancing AI in general is a risky undertaking. This book is the result and it sets a new standard to be discussed by all of us. IBERAMIA was established in 1988 Barcelona by three Ibero American AI Associations AEPIA from Spain SMIA from Mexico and APPIA from Portugal after a first meeting in Morelia Mexico in 1986 of SMIA and AEPIA.

Research and Development in Intelligent Systems XVI Ann Macintosh, Frans Coenen, 2012-12-06 This volume contains the refereed technical papers presented at ES99 the Nineteenth SGES International Conference on Knowledge Based Systems and Applied Artificial Intelligence held in Cambridge in December 1999. The papers in this volume present new and innovative developments in the field divided into sections on knowledge engineering knowledge discovery case based reasoning learning and knowledge representation and refinement. This is the sixteenth volume in the Research and Development series. The series is essential reading for those who wish to keep up to date with developments in this important field. The Application Stream papers are published as a companion volume under the title Applications and Innovations in Intelligent Systems VII.

Artificial Intelligence Research and Development Teresa Alsina, Josep Puyol-Gruart, Carme Torras, 2008 In Japan there are robots that guide customers through marketplaces advising them where to find the product matching their needs and realistic replicas of university professors allow them to teach their lectures a hundred kilometers away from the classroom. Not to speak about intelligent prostheses and remote high precision surgery.

Inductive Logic Programming Filip Železný, Nada Lavrač, 2008-08-29 The 18th International Conference on Inductive Logic Programming was held in Prague September 10-12 2008. ILP returned to Prague after 11 years and it is tempting to look at how the topics of interest have evolved during that time. The ILP community clearly continues to cherish its beloved first order logic representation framework. This is legitimate as the work presented at ILP 2008 demonstrated that there is still room for both extending established ILP approaches such as inverse entailment and exploring novel logic induction frameworks such as brave induction. Besides the topics lending ILP research its unique focus we were glad to see in this year's proceedings a good number of papers contributing to areas such as statistical relational learning graph mining or the semantic web. To help open ILP to more mainstream research areas the conference featured three excellent invited talks from the domains of the semantic web Frank van Harmelen bioinformatics Mark Craven and cognitive sciences Josh Tenenbaum. We deliberately looked for speakers who are not directly involved in ILP research. We further invited a tutorial on statistical relational learning Kristian Kersting to meet the strong demand to have the topic presented from the ILP perspective. Lastly Stefano Bertolo from the European Commission was invited to give a talk on the ideal niches for ILP in the current EU supported research on
