Selcen Kilinc, 2013-05-15 Given its importance to consumer safety fire resistant textiles are one of the fastest growing sectors in industrial textiles Handbook of fire resistant textiles provides a comprehensive review of the considerable advances that have occurred in the field of fire resistant textiles in recent years It draws together scientific and technical expertise from around the world to produce an important source of current knowledge on fire resistant textiles and their use for protection in hostile environments Part one provides an overview of fire resistant textiles Chapters discuss burning and combustion mechanisms of textile fibers chemical modification of natural and synthetic fibers to improve flame retardancy multi component flame resistant coating techniques for textiles care and maintenance of fire resistant textiles along with the safety health and environmental aspects of flame retardants Part two covers different types of fire resistant fibers and fabrics including flame retardant cotton wool ceramic fibers and blends composites and nonwovens Part three reviews standards regulations and characterization of fire resistant textiles Part four includes case studies of major applications of fire resistant textiles The Handbook of fire resistant textiles is an invaluable resource for a broad spectrum of professionals in the textiles and apparel industries including textile and garment manufacturers engineers researchers designers developers and buyers Provides a comprehensive review of the considerable advances that have occurred in the field of fire resistant textiles in recent years Discusses burning and combustion mechanisms of textile fibers and chemical modification of natural and synthetic fibers to improve flame retardancy Covers different types of fire resistant fibers and fabrics including flame retardant cotton wool ceramic fibers and blends composites and nonwovens Combustibility of Plastics F. Fire, 1991 Although many people may want to know how plastics burn the question of how plastics burn is only a part of a much larger question How does anything burn To examine

the burning process of plastics in isolation does not make any sense and may lend credence to the idea that plastics are a special material with a special hazard An analogy would be to study how carbonless carbon paper burns and then to relate the burning characteristics and combustion products of this single type of paper to all other types of paper and even to other wood products and to wood itself The testing of one type of product from a very large family of products that are physically similar and the relation of these test results to all other members of that family has no basis in the scientific method Those who do so are ignorant of science unless they have some hidden reason for wanting to ascribe certain properties to all related materials

Theory of Flame Retardation of Polymeric Materials Li Jianjun, Ou Yuxiang, 2019-08-19 Flame retardant materials are of vital importance in guaranteeing personal security Especially the demand for non toxic low smoking polymerized flame retardants increases and new materials enter the market The authors present the fundamental theory of polymer combustion compare different flame retardants describe smoke suppression mechanisms and explain analyzing techniques for new materials
