Never before has so much power been so accessible to the web designer. This book is designed to put that power in your hands. Flash MX Studio has been broken into four sections to address the most common needs for the Flash designer. First off, Jamie McDonald provides five chapters on site presentation and the principles of web design. These opening chapters take a look at how to create slick professional level sites involving Flash MX's new drawing and motion capabilities and interactive techniques. The second section concentrates on ActionScript. Flash's resident coding environment is crucial to master and taps into Flash's great strength: intuitive and interactive applications. Keith Peters and Todd Yard have buddied up on this section and examine some of the most advanced ActionScript techniques around. Be warned: this section is not for the faint hearted. Section three takes a look at Flash MX's greatly improved visual audio and audiovisual capabilities. Its three chapters, written by Jez Turner and Alex White, concentrate on building a single site aimed at displaying rich media content. The final section is devoted to expounding a few myths about dynamic content using Flash. Its four chapters talk about general practice before focusing in on specific areas including introductions to PHP and XML together with a look at Macromedia's brand new ColdFusion MX.
