Crisi con ogni probabilit il termine con cui sono meglio identificabili questi anni Dall economia all etica dai mercati alla religione non sembra esistere alcun ambito della nostra vita che non risulti affetto da una qualche forma di crisi Non fanno eccezione il settore delle costruzioni il mestiere dell architetto e il ruolo attuale del progetto di architettura nelle dinamiche di trasformazione del territorio e della citt Si tratta di una crisi di sistema che nel coinvolgere il comparto dell edilizia privata cos come quello dei lavori pubblici sembra aver sottratto al settore gli strumenti necessari per affrontare adeguatamente le sfide strategiche dei prossimi anni Il territorio l ambiente e il paesaggio la sostenibilit e le emergenze energetiche la qualit delle nuove costruzioni la riqualificazione e la valorizzazione del patrimonio edilizio esistente Riferendosi a questo scenario il testo propone letture delle criticit attuali utilizzando lo stratagemma retorico di dicotomie costruite intorno a tre ambiti Progetti Processi Prodotti sui quali appare necessario stimolare un confronto tra i molteplici attori coinvolti La permanenza in architettura Aa.Vv., 2011-11-10T00:00:00+01:00

Il termine permanenza riferito all architettura significa mantenimento e affermazione nel tempo dei valori tecnici funzionali e simbolici degli edifici indica una precisa categoria di vita utile Sul piano operativo richiama anche la programmazione della durata e il progetto della obsolescenza fisica e funzionale un azione prioritaria il cui controllo acquisisce valore strategico ai fini della realizzazione stessa dell intervento Oggi al concetto di permanenza sempre pi spesso contrapposto quello di temporaneit due paradigmi che nella loro contrapposizione toccano e per questo ci inducono a indagare importanti questioni di politica tecnica ed edilizia con significative ricadute anche su altri campi come l economia e soprattutto le politiche ambientali In altre parole giusto che il tema della programmazione della durata edilizia si affianchi sempre pi all esigenza di un uso pi razionale delle risorse disponibili Del tema il testo propone riflessioni sui termini storici terminologici e problematici e in conclusione su alcune questioni prettamente operative The word permanence when related to architecture means maintaining and assurance of technical functional and symbolic values of buildings during the time it denotes a specific category of service life At operational level it also refers to service life planning and to management of physical and functional obsolescence an overriding action whose control takes on a strategic value in order to project construction in itself Today it is more and more often contrasted the idea of permanence besides that of temporariness two paradigms that in their opposition concern and owing to this persuade us to investigate important matters related to technical and construction politics with meaningful consequences on other fields too as well as economy and above all environmental politics In other words it is right that service life planning of buildings comes more and more abreast of need of a more rational use of available resources On such theme the work proposes some notes about historical terminological and problematic background and last of all on some typically operational issues Massimo Lauria Reggio Calabria 1964 architetto professore associato di Tecnologia dell Architettura presso la Facolt di Architettura dell Universit Mediterranea di Reggio Calabria

HAPM Component Life Manual Hapm Publications Ltd., 1992-11-19 HAPM Component Life Manual has broken new ground it is the first document to provide extensive life span assessments suitable for insurance purposes for a wide range of building components which are classified within the concept of quality specifications A further benefit is that it does not seek to be prescriptive It indicates benchmarks against which new or differing specifications can be assessed in that sense it is both robust and flexible The concept of the manual is simple yet profound Seven component groups contain a range of component types and sub types each of which has been given a life class designation The life classes embrace good practice a normal amount of maintenance and typical exposure conditions If a new component does not match an existing HAPM class then a new benchmark can be defined and a life assigned
