Mapping the History of Computing-software, 2000 *ICHC 2000* Ulf Hashagen, Reinhard Keil-Slawik, Arthur Lawrence Norberg, William Aspray, Michael Sean Mahoney, Heinz Nixdorf MuseumsForum, Charles Babbage Institute, Heinz Nixdorf Institut, 2000 *Unimagined Futures - ICT Opportunities and Challenges* Leon Strous, Roger Johnson, David Alan Grier, Doron Swade, 2020-12-05 This Festschrift *Unimagined Futures ICT Opportunities and Challenges* is the first Festschrift in the IFIP AICT series. It examines key challenges facing the ICT community today. While addressing the contemporary challenges, the book provides the opportunity to look back to help understand the contemporary scene and identify appropriate future responses to them. Experts in different areas of the ICT scene have contributed to this IFIP 60th anniversary book, which will be a key input to the ICT community worldwide on setting policy priorities and agendas for the coming decade. In addition, a number of contributions look specifically at the role of professionals and of national, regional, and global organizations in disseminating the benefits of ICT to humanity worldwide. **Two Bits** Christopher M. Kelty, 2008-06-09 Ethnographic study of the programmers, engineers, and hackers who have shaped the internet since the 1970s and the battles that have been waged amongst them over the development of open source software. Software Process Improvement for Small and Medium Enterprises: Techniques and Case Studies Oktaba, Hanna, Piattini, Mario, 2008-04-30 Software engineering is of major importance to all enterprises; however, the key areas of software quality and software process improvement standards and models are currently geared toward large organizations, where most software organizations are small and medium enterprises. *Software Process Improvement for Small and Medium Enterprises: Techniques and Case Studies* offers practical and useful guidelines, models, and techniques for improving software processes and products for small and medium enterprises, utilizing the authoritative demonstrative tools of case studies and lessons learned to provide academics, scholars, and practitioners with an invaluable research source. *Programmed Visions* Wendy Hui Kyong Chun, 2013-01-11 A theoretical examination of the surprising emergence of software as a guiding metaphor for our neoliberal world. New media thrives on cycles of obsolescence and renewal, from celebrations of cyber everything to Y2K, from the dot com bust to the next big things, mobile mobs, Web 3.0, cloud computing. In *Programmed Visions*, Wendy Hui Kyong Chun argues that these cycles result in part from the ways in which new media encapsulates a logic of programmability. New media proliferates programmed visions which seek to shape and predict even embody a future based on past data. These programmed visions have also made computers based on metaphor, metaphors for metaphor itself, for a general logic of substitutability. Chun argues that the clarity offered by software as metaphor should make us pause because software also engenders a profound sense of ignorance, who knows what lurks behind our smiling interfaces, behind the objects we click and manipulate. The combination of what can be seen and not seen, known, knowable, and not known, its separation of interface

from algorithm and software from hardware makes it a powerful metaphor for everything we believe is invisible yet generates visible logical effects from genetics to the invisible hand of the market from ideology to culture

Histories of Computing Michael Sean Mahoney, 2011-06-20 Computer technology is pervasive in the modern world its role ever more important as it becomes embedded in a myriad of physical systems and disciplinary ways of thinking The late Michael Sean Mahoney was a pioneer scholar of the history of computing one of the first established historians of science to take seriously the challenges and opportunities posed by information technology to our understanding of the twentieth century Mahoney's work ranged widely from logic and the theory of computation to the development of software and applications as craft work But it was always informed by a unique perspective derived from his distinguished work on the history of medieval mathematics and experimental practice during the Scientific Revolution His writings offered a new angle on very recent events and ideas and bridged the gaps between academic historians and computer scientists Indeed he came to believe that the field was irreducibly pluralistic and that there could be only histories of computing In this collection Thomas Haigh presents thirteen of Mahoney's essays and papers organized across three categories historiography software engineering and theoretical computer science His introduction surveys Mahoney's work to trace the development of key themes illuminate connections among different areas of his research and put his contributions into context The volume also includes an essay on Mahoney by his former students Jed Z Buchwald and D Graham Burnett The result is a landmark work of interest to computer professionals as well as historians of technology and science

The God Problem Howard Bloom, 2012-08-30 God's war crimes Aristotle's sneaky tricks Einstein's pajamas information theory's blind spot Stephen Wolfram's new kind of science and six monkeys at six typewriters getting it wrong What do these have to do with the birth of a universe and with your need for meaning Everything as you're about to see How does the cosmos do something it has long been thought only gods could achieve How does an inanimate universe generate stunning new forms and unbelievable new powers without a creator How does the cosmos create That's the central question of this book which finds clues in strange places Why A does not equal A Why one plus one does not equal two How the Greeks used kickballs to reinvent the universe And the reason that Polish born Benoît Mandelbrot the father of fractal geometry rebelled against his uncle You'll take a scientific expedition into the secret heart of a cosmos you've never seen Not just any cosmos An electrifyingly inventive cosmos An obsessive compulsive cosmos A driven ambitious cosmos A cosmos of colossal shocks A cosmos of screaming stunning surprise A cosmos that breaks five of science's most sacred laws Yes five And you'll be rewarded with author Howard Bloom's provocative new theory of the beginning middle and end of the universe the Bloom toroidal model also known as the big bagel theory which explains two of the biggest mysteries in physics dark energy and why if antimatter and matter are created in equal amounts there is so little antimatter in this universe Called truly awesome by Nobel Prize winner Dudley Herschbach The God Problem will pull you in with the irresistible attraction of a black hole and spit you out again enlightened with the

force of a big bang Be prepared to have your mind blown From the Hardcover edition *Reflections on Programming Systems* Liesbeth De Mol, Giuseppe Primiero, 2019-01-10 This book presents a historical and philosophical analysis of programming systems intended as large computational systems like for instance operating systems programmed to control processes The introduction to the volume emphasizes the contemporary need of providing a foundational analysis of such systems rooted in a broader historical and philosophical discussion The different chapters are grouped around three major themes The first concerns the early history of large systems developed against the background of issues related to the growing semantic gap between hardware and code The second revisits the fundamental issue of complexity of large systems dealt with by the use of formal methods and the development of grand designs like Unix Finally a third part considers several issues related to programming systems in the real world including chapters on aesthetical ethical and political issues This book will interest researchers from a diversity of backgrounds It will appeal to historians philosophers as well as logicians and computer scientists who want to engage with topics relevant to the history and philosophy of programming and more specifically the role of programming systems in the foundations of computing **Qualitative Organizational Research - Volume 3** Beth A.
