**Construction of a Concept of Neuronal Modeling** Marcus Grum, 2022-02-25 The business problem of having inefficient processes imprecise process analyses and simulations as well as non transparent artificial neuronal network models can be overcome by an easy to use modeling concept With the aim of developing a flexible and efficient approach to modeling simulating and optimizing processes this paper proposes a flexible Concept of Neuronal Modeling CoNM The modeling concept which is described by the modeling language designed and its mathematical formulation and is connected to a technical substantiation is based on a collection of novel sub artifacts As these have been implemented as a computational model the set of CoNM tools carries out novel kinds of Neuronal Process Modeling NPM Neuronal Process Simulations NPS and Neuronal Process Optimizations NPO The efficacy of the designed artifacts was demonstrated rigorously by means of six experiments and a simulator of real industrial production processes

**Parallel Computing: Fundamentals, Applications and New Directions** E.H. D'Hollander, G.R. Joubert, Frans Peters, Ulrich

Trottenberg,1998-07-22 This volume gives an overview of the state of the art with respect to the development of all types of parallel computers and their application to a wide range of problem areas The international conference on parallel computing ParCo97 Parallel Computing 97 was held in Bonn Germany from 19 to 22 September 1997 The first conference in this biannual series was held in 1983 in Berlin Further conferences were held in Leiden The Netherlands London UK Grenoble France and Gent Belgium From the outset the aim with the ParCo Parallel Computing conferences was to promote the application of parallel computers to solve real life problems In the case of ParCo97 a new milestone was reached in that more than half of the papers and posters presented were concerned with application aspects This fact reflects the coming of age of parallel computing Some 200 papers were submitted to the Program Committee by authors from all over the world The final programme consisted of four invited papers 71 contributed scientific industrial papers and 45 posters In addition a panel discussion on Parallel Computing and the Evolution of Cyberspace was held During and after the conference all final contributions were refereed Only those papers and posters accepted during this final screening process are included in this volume The practical emphasis of the conference was accentuated by an industrial exhibition where companies demonstrated the newest developments in parallel processing equipment and software Speakers from participating companies presented papers in industrial sessions in which new developments in parallel computing were reported

Fundamentals of Engineering (F.E.) Examination Eugene L. Boronow,1986      **IEEE Circuits & Devices** ,1999      **Numerical Methods for Nonlinear Engineering Models** John R. Hauser,2009-03-24 There are many books on the use of numerical methods for solving engineering problems and for modeling of engineering artifacts In addition there are many styles of such presentations ranging from books with a major emphasis on theory to books with an emphasis on applications The purpose of this book is hopefully to present a somewhat different approach to the use of numerical methods for engineering applications Engineering models are in general nonlinear models where the response of some appropriate engineering variable depends in a nonlinear manner on the variation of some independent parameter It is certainly true that for many types of engineering models it is sufficient to approximate the real physical world by some linear model However when engineering environments are pushed to extreme conditions nonlinear effects are always encountered It is also such extreme conditions that are of major importance in determining the reliability or failure limits of engineering systems Hence it is essential that engineers have a toolbox of modeling techniques that can be used to model nonlinear engineering systems Such a set of basic numerical methods is the topic of this book For each subject area treated nonlinear models are incorporated into the discussion from the very beginning and linear models are simply treated as special cases of more general nonlinear models This is a basic and fundamental difference in this book from most books on numerical methods
