Hormones In Development:

Hormones in Development Max Hamburg, Ernest James William Barrington, 1971 *The Role of Thyroid Hormones in Vertebrate Development, volume II* Marco António Campinho, Laurent M. Sachs, 2024-04-26

Thyroid hormones role in development was first suggested in the 18th century when a relationship between goiter and cretinism was found by F E Fodere But it was Rudolf Virchow work in the late 19th century with thyroidectomized animals that clearly demonstrated that goiter led to cretinism This opened the door to the understanding of TH action on vertebrate development However given the relative ease by which cretinism could be treated simply by eating animal thyroid gland or iodine supplementation research into the action of TH on vertebrate development has been lagging This was further enhanced by the complex biology of TH where after production in the gland entry activation and binding of the TH to cognate receptors in target cells is highly regulated Nonetheless new scientific advances and technologies are now providing tools to dissect the developmental role of TH on vertebrate development both embryonic and post natal The post natal role of TH in vertebrate development is long known from anuran studies but less evidences exist from other vertebrates Recently new evidences show that TH constitute key developmental signal in embryonic development of vertebrates especially in neural development from humans to fish This new evidences are corroborating long standing observations that infants from mothers with impaired TH physiology presented changes in mental and cognitive indexes Nonetheless given that TH constitute integrative physiological signals in vertebrates a new scenario is emerging whereas TH seem to be important in the development and maturation of most organ systems in vertebrates during their different life transitions

Developments of the Avian Embryo Freeman, 2012-12-06 In this book we have described the major events of embryonic development and considered the underlying mechanisms which result in the production of a viable hatchling We have as the subtitle of the book indicates concentrated on behavioural and physiological topics it is not our purpose to consider the early embryology of the bird which is adequately covered by other texts but we have included morphogenetic information where appropriate The form of the book was dictated by a belief that interest in this aspect of development is not confined to embryologists biochemists and physiologists Therefore after describing the conditions in which the egg normally develops we have considered first the whole embryo what it is like at different stages what it does how it gets from one position to another within the shell and how later it comes to interact with the wider environment of the nest Only after this have we considered the development of the nervous and sensory mechanisms on which this transformation depends and on the problem of the level of behavioural maturity with which the chick emerges from the egg With the main lines of development described we have in the second part of the book turned to a detailed consideration of the physiology of development ranging from what may be conveniently described as the life support systems gaseous exchange provision of energy etc to the of hormones in avian development

The Hormones VI Mohhamad Reza Kiani, 2012-12-02 The Hormones Physiology Chemistry and Applications Volume I covers roles of hormones

in a wide diversity of vital processes This volume consists of 16 chapters that discuss the chemistry of hormones their role in organisms other than mammals and some aspects of the animal physiology After a brief history of hormone research studies this book goes on exploring the chemistry physiology assay and mechanism of action of plant insect and crustacean hormones The subsequent chapters examine the biochemistry physiology and assay methods of hormones of the gastrointestinal tract parathyroid gland pancreas and ovary These topics are followed by discussions on the chemistry and metabolism of other hormones such as progesterone androgens and adrenal cortical and anterior pituitary hormones The final chapters consider the role of ovarian pituitary and thyroid hormones in mammary growth as well as the mechanism of hormonal control of lactation Endocrinologists applied biologists physiologists biochemists and researchers in various fields of medicine will find this book of great value Development, Maturation, and Senescence of Neuroendocrine Systems Colin G.

Scanes,2012-12-02 Development Maturation and Senescence of Neuroendocrine Systems A Comparative Approach discusses the various phases of the aging continuum of neuroendocrine systems This book explores the fundamental and physiological component of animals which is an essential contributor to senescence Organized into three parts encompassing 21 chapters this volume starts with a discussion of the concept of neurosecretory neuron that was introduced by Ernst Scharrer in 1928 This book discusses the challenges in the study of the development of the neuroendocrine system in insects with a focus on Lepidoptera Other chapters consider the neuroendocrine mechanisms that control the physiological processes in crustaceans The reader is then introduced to the major neurohemal structures in crustaceans including the sinus gland the pericardial organs and the post commissural organs The final chapter discusses the two brain systems that show impact of endogenous steroids that account for subsets of senescent changes This book is a valuable resource for neurobiologists molecular biologists and immunologists *Hormones and Life History Strategies* Sarah Kelly McMenamin,Fedor N.
