## **From Synapses To Rules Discovering Symbolic Rules From Neural Processed Data:**

*From Synapses to Rules* Bruno Apolloni, Franz Kurfess, 2012-12-06 One high level ability of the human brain is to understand what it has learned This seems to be the crucial advantage in comparison to the brain activity of other primates At present we are technologically almost ready to artificially reproduce human brain tissue but we still do not fully understand the information processing and the related biological mechanisms underlying this ability Thus an electronic clone of the human brain is still far from being realizable At the same time around twenty years after the revival of the connectionist paradigm we are not yet satisfied with the typical subsymbolic attitude of devices like neural networks we can make them learn to solve even difficult problems but without a clear explanation of why a solution works Indeed to widely use these devices in a reliable and non elementary way we need formal and understandable expressions of the learnt functions of being tested manipulated and composed with These must be susceptible other similar expressions to build more structured functions as a solution of complex problems via the usual deductive methods of the Artificial Intelligence Many effort have been steered in this directions in the last years constructing artificial hybrid systems where a cooperation between the sub symbolic processing of the neural networks merges in various modes with symbolic algorithms In parallel neurobiology research keeps on supplying more and more detailed explanations of the low level phenomena responsible for mental processes

*A Few Things I Know About Her* Bruno Apolloni, 2022-04-01 This book reconsiders key issues such as description and explanation which affect data analytics For starters the soul does not exist Once released from this cumbersome roommate we are left with complex biological systems namely ourselves who must configure their environment in terms of worlds that are compatible with what they sense Far from supplying yet another cosmogony the book provides the cultivated reader with computational tools for describing and understanding data arising from his surroundings such as climate parameters or stock market trends even the win defeat story of his son football team Besides the superposition of the very many universes considered by quantum mechanics we aim to manage families of worlds that may have generated those data through the key feature of their compatibility Starting from a sharp engineering of ourselves in term of pairs consisting of genome plus a neuron ensemble we toss this feature in different cognitive frameworks within a span of exploitations ranging from probability distributions to the latest implementations of machine learning From the perspective of human society as an ensemble of the above pairs the book also provides scientific tools for analyzing the benefits and drawbacks of the modern paradigm of the world as a service

Human-Centric Information Processing Through Granular Modelling Andrzej Bargiela, Witold Pedrycz, 2009-02-26 Information granules and their processing permeate a way in which we perceive the world carryout processing at the conceptual abstract level and communicate our findings to the surrounding environment The importance of information granulation becomes even more apparent when we are faced with a rapidly growing flood of data become challenged to make decisions in complex data settings and are required to appreciate the context from which

the data is derived Human centricity of systems that claim to be intelligent and the granular computing come hand in hand It is not surprising at all to witness that the paradigm of Granular Computing has started to gain visibility and continues along this path by gathering interest from the circles of academics and practitioners It is quite remarkable that the spectrum of application and research areas that have adopted information granulation as a successful strategy for dealing with information complexity covers such diverse fields as bioinformatics image understanding environmental monitoring urban sustainability to mention few most visible in the literature Undoubtedly there are two important aspects of Granular Computing that are worth stressing First there are several formalisms in which information granules are articulated so be intervals sets fuzzy sets rough sets soft sets approximate sets near sets and alike They are complementary and each of them offers some interesting views at the complexity of the world and cyberspace Neural Nets Bruno Apolloni, 2006-04-06 This book constitutes the thoroughly refereed postproceedings of the 16th Italian Workshop on Neural Nets WIRN 2005 as well as the satellite International Workshop on Natural and Artificial Immune Systems NAIS 2005 held in Vietri sul Mare Italy in June 2005 The 41 revised papers presented together with a lecture by the winner of the Premio Caianiello award were carefully reviewed and improved during two rounds of selection and refereeing *Progresses in Artificial Intelligence and Neural Systems* Anna Esposito, Marcos Faundez-Zanuy, Francesco Carlo Morabito, Eros Pasero, 2020-07-09 This book provides an overview of the current advances in artificial intelligence and neural nets Artificial intelligence AI methods have shown great capabilities in modelling prediction and recognition tasks supporting human machine interaction At the same time the issue of emotion has gained increasing attention due to its relevance in achieving human like interaction with machines The real challenge is taking advantage of the emotional characterization of humans interactions to make computers interfacing with them emotionally and socially credible The book assesses how and to what extent current sophisticated computational intelligence tools might support the multidisciplinary research on the characterization of appropriate system reactions to human emotions and expressions in interactive scenarios Discussing the latest recent research trends innovative approaches and future challenges in AI from interdisciplinary perspectives it is a valuable resource for researchers and practitioners in academia and industry **Text, Speech and Dialogue** Petr Sojka, Ivan Kopecek, Karel Pala, 2003-08-02 The Text Speech and Dialogue TSD Conference 2002 it should be noticed is now being held for the fth time and we are pleased to observe that in its short history it has turned out to be an international forum successfully intertwining the basic elds of NLP It is our strong hope that the conference contributes to a better understanding between researchers from the various areas and promotes more intensive mutual cooperation So far the communication between man and computers has displayed a one way nature humans have to know how the chines work and only then can they understand them The opposite however is still quite far from being real our understanding of how our user friendly computers can understand us humans is not deep enough yet A lot of work has to be done both in the near and distant future Let TSD 2002 be a modest contribution to this

goal The conference also serves well in its second purpose to facilitate researchers meeting in the NLP eld from Western and Eastern Europe Moreover many participants now come from other parts of the world thus making TSD a real crossroadsforresearchersintheNLParea Thisvolumecontainstheproceedings of this conference held in Brno September 9 12 2002 We were honored to have as keynote speakers James Pustejovsky from Brandeis University and Ronald Cole from the University of Colorado We would like to thank all the Program Committee members and external reviewers for their conscientious and diligent reviewing work

Advances in Research on Neurodegeneration R. Horowski,Y. Mizuno,C.W. Olanow,W. Poewe,P. Riederer,J.A. Stoessel,M.B.H. Youdim,2013-04-09 The 10th International Winter Conference on Neurodegeneration IWCN has taken place from February 14 16 2002 at the lovely SchloB Ziethen an old prussian manor in Prussia faute de mieux called SchloB i e cas tle or residence This place is 20 km off Tegel Airport Berlin s main airport and has been beautifully restored by baroness Edith von Thiingen nee von BUlow i e of historical Prussian aristocracy it lends itself rather perfectly for the IWCN type of small interdisciplinary workshops on neurodegenera tion which combine short lectures with plenty of discussion In this context we could quote Alexander von Humboldt s famous opening words for one of the first international scientific meetings held at Berlin on September 18 1828 The main purpose does not consist in a mutual reading of manuscripts all to be printed after at least one year in specialised publications but in the personal communication amongst those who work in similar scientific fields the oral and thus more stimulating exchange of ideas might they represent facts opinions or doubts the foundation of friendly relations which convey illumination to our sciences serene grace to our lives and tolerance and mildness to our habits Berlin Sept 18 1828 Alexander von Humboldt To the IWCN aficionado it may come as a little surprise that this is the pub lication of the 10th Winter Conference as this might mean that they must have missed number 9

Advances in Neural Networks Simone Bassis,Anna Esposito,Francesco Carlo Morabito,Eros Pasero,2016-06-18 This carefully edited book is putting emphasis on computational and artificial intelligent methods for learning and their relative applications in robotics embedded systems and ICT interfaces for psychological and neurological diseases The book is a follow up of the scientific workshop on Neural Networks WIRN 2015 held in Vietri sul Mare Italy from the 20th to the 22nd of May 2015 The workshop at its 27th edition became a traditional scientific event that brought together scientists from many countries and several scientific disciplines Each chapter is an extended version of the original contribution presented at the workshop and together with the reviewers peer revisions it also benefits from the live discussion during the presentation The content of book is organized in the following sections 1 Introduction 2 Machine Learning 3 Artificial Neural Networks Algorithms and models 4 Intelligent Cyberphysical and Embedded System 5 Computational Intelligence Methods for Biomedical ICT in Neurological Diseases 6 Neural Networks Based Approaches to Industrial Processes 7 Reconfigurable Modular Adaptive Smart Robotic Systems for Optoelectronics Industry The White R Instantiation This book is unique in proposing a holistic and multidisciplinary approach to implement autonomous and
