Recent Developments in Foresight Methodologies Maria Giaoutzi, Bartolomeo Sapio, 2012-11-28 Foresight is an area within Futures Studies that focuses on critical thinking concerning long term developments whether within the public sector or in industry and management and is something of a sub section of complexity and network science. This book examines developments in foresight methodologies and relates in its greater part to the work done in the context of the COSTA22 network of the EU on Foresight Methodologies. Foresight is a professional practice that supports significant decisions and as such it needs to be more assured of its claims to knowledge methodology. Foresight is practiced across many domains and is not the preserve of specialized futurists or indeed of foresight specialists. However the disciplines of foresight are not well articulated or disseminated across domains leading to re inventions and practice that does not make best use of experience in other domains. The methodological development of foresight is an important task that aims at strengthening the pool of the tools available for application thereby empowering the actors involved in foresight practice. Elaborating further on methodological issues such as those presented in the present book enables the actors involved in foresight to begin to critique current practice from this perspective and thirdly to begin to design foresight practice. The present trends towards methodological concerns indicates a move from given expert predicted futures to one in which futures are nurtured through a dialogue among stakeholders. The book has four parts each elaborating on a set of aspects of foresight methodologies. After an introductory section Part II considers theorizing about foresight methodologies. Part III covers system content issues and Part IV presents foresight tools and approaches.
