Handbook of Biological Control T. W. Fisher, Thomas S. Bellows, L. E. Caltagirone, D. L. Dahlsten, Carl B. Huffaker, G. Gordh, 1999-09-20 For many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens However these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist As a result the use of biological controlling agents is increasing This book is a comprehensive and authoritative handbook of biological control **Handbook of Biological Control** T. W. Fisher, 1999

Biological Control George E. Heimpel, Nicholas J. Mills, 2017-04-03 Biological control is the suppression of populations of pests and weeds by living organisms These organisms can provide important protection from invasive species and protect our environment by reducing the need for pesticides However they also pose possible environmental risks so biological control interventions must be undertaken with great care This book enhances our understanding of biological control interactions by combining theory and practical application Using a combination of historical analyses theoretical models and case studies with explicit links to invasion biology the authors cover biological control of insects weeds plant pathogens and vertebrate animals The book reflects increasing recognition of risks over the past 20 years and incorporates the latest technological advances and theoretical developments It is ideal for researchers and students of biological control and invasion biology **Proceedings of the XII International Symposium on Biological Control of Weeds** R.
