Agricultural Cybernetics Yanbo Huang, Qin Zhang, 2021-08-17 Agricultural systems are uniquely complex systems given that agricultural systems are parts of natural and ecological systems Those aspects bring in a substantial degree of uncertainty in system operation Also impact factors

such as weather factors are critical in agricultural systems but these factors are uncontrollable in system management Modern agriculture has been evolving through precision agriculture beginning in the late 1980s and biotechnological innovations in the early 2000s Precision agriculture implements site specific crop production management by integrating agricultural mechanization and information technology in geographic information system GIS global navigation satellite system GNSS and remote sensing Now precision agriculture is set to evolve into smart agriculture with advanced systematization informatization intelligence and automation From precision agriculture to smart agriculture there is a substantial amount of specific control and communication problems that have been investigated and will continue to be studied In this book the core ideas and methods from control problems in agricultural production systems are extracted and a system view of agricultural production is formulated for the analysis and design of management strategies to control and optimize agricultural production systems while exploiting the intrinsic feedback information exchanging mechanisms On this basis the theoretical framework of agricultural cybernetics is established to predict and control the behavior of agricultural production systems through control theory **Food Process Design** Zacharias B. Maroulis, George D. Saravacos, 2003-05-09 Utilizes simplified computer strategies to analyze develop and optimize industrial food processes Discusses the integration and economic evaluation of the entire processing plant including effective use of water energy and raw materials process profitability and wastewater reduction Offers detailed numerical examples for major food processes including heating cooling evaporation dehydration and thermal processing **Liquid and Vapour Flows in Porous Bodies**

N.V. Churaev, 2018-05-02 Adopts a completely original approach to the study of processes of mass transfer In contrast to the usual approach based on the concept of continuum media and the theory of heat and mass transfer the topic is considered from a new viewpoint taking into account the heterogeneous dispersal state of porous bodies The author bases his discussion on the theory of surface forces and microhydrodynamic analysis of the processes of mass transport of gases liquids and vapors providing the reader with a systematic account of liquid solid and gas solid interfaces Topics treated in this book include structural peculiarities equilibrium and properties of liquids in porous bodies Various mechanisms of mass transfer are considered including liquid flow in pores and films gas diffusion combined transfer of liquid and vapor convective diffusion in solutions structure formation capillary phenomena and wetting This unique book provides a wealth of information from the former Soviet Union which will be of great interest to chemists physicists and materials scientists as well as industrialists working with a variety of different products in which disperse systems and porous bodies are important
