**Cumulated Index Medicus**, 1996 **John Heywood's complete series of home lesson books** Alfonzo Gardiner, 1882 [Growing up in a Digital World - Social and Cognitive Implications](#) Mikael Heimann, Adriana Bus, Rachel Barr, 2021-11-30 **The Janus-Face of Language: Where Are the Emotions in Words and the Words in Emotions?**

Cornelia Herbert, Thomas Ethofer, Andreas J. Fallgatter, Peter Walla, Georg Northoff, 2018-09-28 Language has long been considered independent from emotions In the last few years however research has accumulated empirical evidence against this theoretical belief of a purely cognitive based foundation of language In particular through research on emotional word processing it has been shown that processing of emotional words activates emotional brain structures elicits emotional facial expressions and modulates action tendencies of approach and avoidance probably in a similar manner as processing of non verbal emotional stimuli does In addition it has been shown that emotional content is already processed in the visual cortex in a facilitated manner which suggests that processing of emotional language content is able to circumvent in depth semantic

analysis Yet this is only one side of the coin Very recent research putting words into context suggests that language may also construe emotions and that by studying word processing one can provide a window to one's own feelings All in all the empirical observations support the thesis of a close relationship between language and emotions at the level of word meaning as a specific evolutionary achievement of the human species As such this relationship seems to be different from the one between emotions and speech where emotional meaning is conveyed by nonverbal features of the voice But what does this relationship between written words and emotions theoretically imply for the processing of emotional information The present Research Topic and its related articles aim to provide answers to this question This book comprises several experimental studies investigating the brain structures and the time course of emotional word processing Included are studies examining the affective core dimensions underlying affective word processing and studies that show how these basic affective dimensions influence word processing in general as well as the interaction between words feelings and expressive behavior In addition new impetus comes from studies that on the one hand investigate how task sublexical and intrapersonal factors influence emotional word processing and on the other hand extend emotional word processing to the domains of social context and self related processing Finally future perspectives are outlined including research on emotion and language acquisition culture and multilingualism In summary this textbook offers scientists from different disciplines insight into the neurophysiological behavioral and subjective mechanisms underlying emotion and language interactions It gives new impulses to existing theories on the embodiment of language and emotion and provides new ways of looking at emotion cognition interactions *Index Medicus*, 2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings

Language and Memory: Understanding Their Interactions, Interdependencies, and Shared Mechanisms Melissa Duff, Vitoria Piai, 2020-11-18 Language and memory have historically been studied apart as unique cognitive abilities and with distinct research traditions and methods Over the past several decades however a growing body of evidence suggests that language and memory are heavily intertwined and may even rely on shared cognitive and neural mechanisms Cutting across theoretical and methodological approaches these findings offer novel insights into the interactions and interdependencies of language and memory These advances also have considerable theoretical and clinical implications for the neurobiology of language and memory their development representation and maintenance across the lifespan the intervention and rehabilitation of disorders of language and memory and the evolution of these two quintessential human abilities The Routledge Handbook of Second Language Acquisition and Neurolinguistics Kara Morgan-Short, Janet G. van Hell, 2023-12-22 The Routledge Handbook of Second Language Acquisition and Neurolinguistics provides a comprehensive discussion of a wide range of neurocognitive and neurobiological scientific research about learning second or additional languages It is a one of a kind centralized resource that brings together research that is typically found in disparate publication venues Eminent global scholars from various disciplines synthesize and cross fertilize current and past neural research about second
