## **Image Models And Their Speech Model Cousins:**

*Image Models (and their Speech Model Cousins)* Stephen Levinson, Lawrence A. Shepp, 1996-08-29 This volume explores the interface between two diverse areas of applied mathematics which are both customers of the maximum likelihood methodology emission tomography and hidden Markov models as an approach to speech understanding Other areas where maximum likelihood is used in this volume include parsing of text Jelinek microstructure of materials Ji DNA sequencing Nelson Most of the participants were in the main areas of speech or emission density reconstruction [The Mathematics of Information Coding, Extraction and Distribution](#) George Cybenko, Dianne P. O'Leary, Jorma Rissanen, 2012-12-06 High performance computing consumes and generates vast amounts of data and the storage retrieval and transmission of this data are major obstacles to effective use of computing power Challenges inherent in all of these operations are security speed reliability authentication and reproducibility This workshop focused on a wide variety of technical results aimed at meeting these challenges Topics ranging from the mathematics of coding theory to the practicalities of copyright preservation for Internet resources drew spirited discussion and interaction among experts in diverse but related fields We hope this volume contributes to continuing this dialogue **Mathematical Approaches for Emerging and Reemerging Infectious**

**Symmetries and Overdetermined Systems of Partial Differential Equations** Michael Eastwood, Willard

Miller, 2009-04-23 This three week summer program considered the symmetries preserving various natural geometric structures There are two parts to the proceedings The articles in the first part are expository but all contain significant new material The articles in the second part are concerned with original research All articles were thoroughly refereed and the range of interrelated work ensures that this will be an extremely useful collection Wave Propagation in Complex Media

George Papanicolaou, 2012-12-06 This IMA Volume in Mathematics and its Applications WAVE PROPAGATION IN COMPLEX MEDIA is based on the proceedings of two workshops Wavelets multigrid and other fast algorithms multipole FFT and their use in wave propagation and Waves in random and other complex media Both workshops were integral parts of the 1994 1995 IMA program on Waves and Scattering We would like to thank Gregory Beylkin Robert Burridge Ingrid Daubechies Leonid Pastur and George Papanicolaou for their excellent work as organizers of these meetings We also take this opportunity to thank the National Science Foundation NSF the Army Research Office ARO and the Office of Naval Research ONR whose financial support made these workshops possible A vner Friedman Robert Gulliver v PREFACE During the last few years the numerical techniques for the solution of elliptic problems in potential theory for example have been drastically improved Several so called fast methods have been developed which reduce the required computing time many orders of magnitude over that of classical algorithms The new methods include multigrid fast Fourier transforms multipole methods and wavelet techniques Wavelets have recently been developed into a very useful tool in signal processing the solution of integral equation etc Wavelet techniques should be quite useful in many wave propagation problems especially in inhomogeneous and nonlinear media where special features of the solution such as singularities might be tracked efficiently

**Inverse Problems in Wave Propagation** Guy Chavent, George Papanicolaou, Paul Sacks, William Symes, 2012-12-06

Inverse problems in wave propagation concern extraction of information about distant structural features from the measurements of scattered waves Tasks of this nature arise in geophysics ocean acoustics civil and environmental engineering ultrasonic nondestructive testing biomedical ultrasonics radar astrophysics and other areas of science and technology The papers in this volume represent most of these scientific and technical topics together with fundamental mathematical investigations of the relation between waves and scatterers Decision Making Under Uncertainty Claude Greengard, Andrzej Ruszczyński, 2012-12-06 In the ideal world major decisions would be made based on complete and reliable information available to the decision maker We live in a world of uncertainties and decisions must be made from information which may be incomplete and may contain uncertainty The key mathematical question addressed in this volume is how to make decision in the presence of quantifiable uncertainty The volume contains articles on model problems of decision making

process in the energy and power industry when the available information is noisy and or incomplete The major tools used in studying these problems are mathematical modeling and optimization techniques especially stochastic optimization These articles are meant to provide an insight into this rapidly developing field which lies in the intersection of applied statistics probability operations research and economic theory It is hoped that the present volume will provide entry to newcomers into the field and stimulation for further research

Algorithms for Parallel Processing Michael T. Heath, Abhiram Ranade, Robert S. Schreiber, 2012-12-06 This IMA Volume in Mathematics and its Applications ALGORITHMS FOR PARALLEL PROCESSING is based on the proceedings of a workshop that was an integral part of the 1996 97 IMA program on MATHEMATICS IN HIGH PERFORMANCE COMPUTING The workshop brought together algorithm developers from theory combinatorics and scientific computing The topics ranged over models linear algebra sorting randomization and graph algorithms and their analysis We thank Michael T Heath of University of Illinois at Urbana Computer Science Abhiram Ranade of the Indian Institute of Technology Computer Science and Engineering and Robert S Schreiber of Hewlett Packard Laboratories for their excellent work in organizing the workshop and editing the proceedings We also take this opportunity to thank the National Science Foundation NSF and the Army Research Office ARO whose financial support made the workshop possible

Avner Friedman Robert Gulliver v PREFACE The Workshop on Algorithms for Parallel Processing was held at the IMA September 16 20 1996 it was the first workshop of the IMA year dedicated to the mathematics of high performance computing The workshop organizers were Abhiram Ranade of The Indian Institute of Technology Bombay Michael Heath of the University of Illinois and Robert Schreiber of Hewlett Packard Laboratories Our idea was to bring together researchers who do innovative exciting parallel algorithms research on a wide range of topics and by sharing insights problems tools and methods to learn something of value from one another

Numerical Methods for Bifurcation Problems and Large-Scale Dynamical Systems Eusebius Doedel, Laurette S. Tuckerman, 2012-12-06 The Institute for Mathematics and its Applications IMA devoted its 1997 1998 program to Emerging Applications of Dynamical Systems Dynamical systems theory and related

numerical algorithms provide powerful tools for studying the solution behavior of differential equations and mappings In the past 25 years computational methods have been developed for calculating fixed points limit cycles and bifurcation points A remaining challenge is to develop robust methods for calculating more complicated objects such as higher codimension bifurcations of fixed points periodic orbits and connecting orbits as well as the calculation of invariant manifolds Another challenge is to extend the applicability of algorithms to the very large systems that result from discretizing partial differential equations Even the calculation of steady states and their linear stability can be prohibitively expensive for large systems e g  $10^3$   $10^6$  equations if attempted by simple direct methods Several of the papers in this volume treat computational methods for low and high dimensional systems and in some cases their incorporation into software packages A few papers treat fundamental theoretical problems including smooth factorization of matrices self organized criticality and unfolding of singular heteroclinic cycles Other papers treat applications of dynamical systems computations in various scientific fields such as biology chemical engineering fluid mechanics and mechanical engineering

**Numerical Methods for Polymeric Systems** Stuart G. Whittington, 2012-12-06 Polymers occur in many different states and their physical properties are strongly correlated with their conformations The theoretical investigation of the conformational properties of polymers is a difficult task and numerical methods play an important role in this field This book contains contributions from a workshop on numerical methods for polymeric systems held at the IMA in May 1996 which brought together chemists physicists mathematicians computer scientists and statisticians with a common interest in numerical methods The two major approaches used in the field are molecular dynamics and Monte Carlo methods and the book includes reviews of both approaches as well as applications to particular polymeric systems The molecular dynamics approach solves the Newtonian equations of motion of the polymer giving direct information about the polymer dynamics as well as about static properties The Monte Carlo approaches discussed in this book all involve sampling along a Markov chain defined on the configuration space of the system An important feature of the book is the treatment of Monte Carlo methods including umbrella sampling and multiple Markov chain methods which are useful for strongly interacting systems such as polymers at low temperatures and in compact phases The book is of interest to workers in polymer statistical mechanics and also to a wider audience interested in numerical methods and their application in polymeric systems

Hejhal, Joel

Friedman, Martin C. Gutzwiller, Andrew M. Odlyzko, 2012-12-06 Most people tend to view number theory as the very paradigm of pure mathematics With the advent of computers however number theory has been finding an increasing number of applications in practical settings such as in cryptography random number generation coding theory and even concert hall acoustics Yet other applications are still emerging providing number theorists with some major new areas of opportunity The 1996 IMA summer program on Emerging Applications of Number Theory was aimed at stimulating further work with some of these newest and most attractive applications Concentration was on number theory's recent links with a wide phenomena in quantum mechanics more specifically quantum chaos and b graph theory especially expander graphs and related spectral theory This volume contains the contributed papers from that meeting and will be of interest to anyone intrigued by novel applications of modern number theoretical techniques      Large-Scale Optimization with Applications Lorenz T.

Biegler, Thomas F. Coleman, Andrew R. Conn, Fadil N. Santosa, 2012-12-06 Inverse problems and optimal design have come of age as a consequence of the availability of better more accurate and more efficient simulation packages Many of these simulators which can run on small workstations can capture the complicated behavior of the physical systems they are modeling and have become commonplace tools in engineering and science There is a great desire to use them as part of a process by which measured field data are analyzed or by which design of a product is automated A major obstacle in doing precisely this is that one is ultimately confronted with a large scale optimization problem This volume contains expository articles on both inverse problems and design problems formulated as optimization Each paper describes the physical problem in some detail and is meant to be accessible to researchers in optimization as well as those who work in applied areas where optimization is a key tool What emerges in the presentations is that there are features about the problem that must be taken into account in posing the objective function and in choosing an optimization strategy In particular there are certain structures peculiar to the problems that deserve special treatment and there is ample opportunity for parallel computation THIS IS BACK COVER TEXT Inverse problems and optimal design have come of age as a consequence of the availability of better more accurate and more efficient simulation packages The problem of determining the parameters of a physical system from Mathematics in Industrial Problems Avner Friedman, 2012-12-06 This is the eighth volume in the series Mathematics in Industrial Problems The motivation for these volumes is to foster interaction between Industry and Mathematics at the grass roots level that is at the level of specific problems These problems come from Industry they arise from models developed by the industrial scientists in ventures directed at the manufacture of new or improved products At the same time these problems have the potential for mathematical challenge and novelty To identify such problems I have visited industries and had discussions with their scientists Some of the scientists have subsequently presented their problems in the IMA Seminar on Industrial Problems The book is based on the seminar presentations and on questions raised in subsequent discussions Each chapter is devoted to one of the talks and is self contained The chapters usually provide references to the mathematical literature and a list of open problems that are of interest to industrial scientists For some problems a partial solution is indicated briefly The last chapter of the book contains a short description of solutions to some of the problems raised in the previous volume as well as references to papers in which such solutions have been published

**Mathematics of Multiscale Materials** Kenneth M. Golden, Geoffrey R. Grimmett, Richard D. James, Graeme W. Milton, Pabitra N. Sen, 2012-12-06 Polycrystalline metals porous rocks colloidal suspensions epitaxial thin films gels foams granular aggregates sea ice shape memory metals magnetic materials and electro rheological fluids are all examples of materials where an understanding of the mathematics on the different length scales is a key to interpreting their physical behavior In their analysis of these media scientists coming from a number of disciplines have encountered similar mathematical problems yet it is rare for researchers in the various fields to meet The 1995 1996 program at the Institute for

Mathematics and its Applications was devoted to Mathematical Methods in Material Science and was attended by materials scientists physicists geologists chemists engineers and mathematicians The present volume contains chapters which have emerged from four of the workshops held during the year focusing on the following areas Disordered Materials Interfaces and Thin Films Mechanical Response of Materials from Angstroms to Meters and Phase Transformation Composite Materials and Microstructure The scales treated in these workshops ranged from the atomic to the microstructural to the macroscopic the microstructures from ordered to random and the treatments from purely theoretical to the highly applied Taken together these works form a compelling and broad account of many aspects of the science of multiscale materials and will hopefully inspire research across the self imposed barriers of twentieth century science
