## Locally Finite Root Systems:

*Locally Finite Root Systems* Ottmar Loos, Erhard Neher, 2004 We develop the basic theory of root systems  $R$  in a real vector space  $X$  which are defined in analogy to the usual finite root systems except that finiteness is replaced by local finiteness the intersection of  $R$  with every finite dimensional subspace of  $X$  is finite The main topics are Weyl groups parabolic subsets and positive systems weights and gradings Developments and Trends in Infinite-Dimensional Lie Theory Karl-Hermann Neeb, Arturo Pianzola, 2010-10-17 This collection of invited expository articles focuses on recent developments and trends in infinite dimensional Lie theory which has become one of the core areas of modern mathematics The book is divided into three parts infinite dimensional Lie super algebras geometry of infinite dimensional Lie transformation groups and representation theory of infinite dimensional Lie groups Contributors B Allison D Belti W Bertram J Faulkner Ph Gille H Gl ckner K H Neeb E Neher I Penkov A Pianzola D Pickrell T S Ratiu N R Scheithauer C Schweigert V Serganova K Styrkas K Waldorf and J A Wolf Interactions of Quantum Affine Algebras with Cluster Algebras, Current Algebras and Categorification Jacob Greenstein, David Hernandez, Kailash C. Misra, Prasad Senesi, 2022-03-11 This volume collects chapters that examine representation theory as connected with affine Lie algebras and their quantum analogues in celebration of the impact Vyjayanthi Chari has had on this area The opening chapters are based on mini courses given at the conference Interactions of Quantum Affine Algebras with Cluster Algebras Current Algebras and Categorification held on the occasion of Chari s 60th birthday at the Catholic University of America in Washington D C June 2018 The chapters that follow present a broad view of the area featuring surveys original research and an overview of Vyjayanthi Chari s significant contributions Written by distinguished experts in representation theory a range of topics are covered including String diagrams and categorification Quantum affine algebras and cluster algebras Steinberg groups for Jordan pairs Dynamical quantum determinants and Pfaffians Interactions of Quantum Affine Algebras with Cluster Algebras Current Algebras and Categorification will be an ideal resource for researchers in the fields of representation theory and mathematical physics

Steinberg Groups for Jordan Pairs Ottmar Loos, Erhard Neher, 2020-01-10 The present monograph develops a unified theory of Steinberg groups independent of matrix representations based on the theory of Jordan pairs and the theory of 3 graded locally finite root systems The development of this approach occurs over six chapters progressing from groups with commutator relations and their Steinberg groups then on to Jordan pairs 3 graded locally finite root systems and groups associated with Jordan pairs graded by root systems before exploring the volume s main focus the definition of the Steinberg group of a root graded Jordan pair by a small set of relations and its central closedness Several original concepts such as the notions of Jordan graphs and Weyl elements provide readers with the necessary tools from combinatorics and group theory Steinberg Groups for Jordan Pairs is ideal for PhD students and researchers in the fields of elementary groups Steinberg groups Jordan algebras and Jordan pairs By adopting a unified approach anybody interested in this area who seeks an

alternative to case by case arguments and explicit matrix calculations will find this book essential

*Rigidity Theorems for Actions of Product Groups and Countable Borel Equivalence Relations* Greg Hjorth, A. S. Kechris, 2005 Contributes to the theory of Borel equivalence relations considered up to Borel reducibility and measures preserving group actions considered up to orbit equivalence This title catalogs the actions of products of the free group and obtains additional rigidity theorems and relative ergodicity results in this context

*Higher Complex Torsion and the Framing Principle* Kiyoshi Igusa, 2005 Intends to prove that higher Franz Reidemeister FR torsion satisfies the transfer property and a formula known as the Framing Principle in full generality This title uses these properties to compute the higher FR torsion for various smooth bundles with oriented closed even dimensional manifold fibers

**The Second Duals of Beurling Algebras** Harold G. Dales, Anthony To-Ming Lau, 2005 Let  $A$  be a Banach algebra with second dual space  $A''$  We propose to study the space  $A''$  as a Banach algebra There are two Banach algebra products on  $A''$  denoted by  $\Box$  and  $\Diamond$  The Banach algebra  $A''$  is Arens regular if the two products  $\Box$  and  $\Diamond$  coincide on  $A''$

*Lie Algebras and Related Topics* Marina Avitabile, Jörg Feldvoss, Thomas Weigel, 2015-11-30 This volume contains the proceedings of the Workshop on Lie Algebras in honor of Helmut Strade's 70th Birthday held from May 22 24 2013 at the Università degli Studi di Milano Bicocca Milano Italy Lie algebras are at the core of several areas of mathematics such as Lie groups algebraic groups quantum groups representation theory homogeneous spaces integrable systems and algebraic topology The first part of this volume combines research papers with survey papers by the invited speakers The second part consists of several collections of problems on modular Lie

algebras their representations and the conjugacy of their nilpotent elements as well as the Koszulity of restricted Lie algebras and Lie properties of group algebras or restricted universal enveloping algebras **Fredholm Operators and Einstein Metrics on Conformally Compact Manifolds** John M. Lee, 2006 Volume 183 number 864 end of volume **The Universal Kobayashi-Hitchin Correspondence on Hermitian Manifolds** Martin Lübke, Andrei Teleman, 2006 We prove a very general Kobayashi Hitchin correspondence on arbitrary compact Hermitian manifolds and we discuss differential geometric properties of the corresponding moduli spaces This correspondence refers to moduli spaces of universal holomorphic oriented pairs Most of the classical moduli problems in complex geometry e g holomorphic bundles with reductive structure groups holomorphic pairs holomorphic Higgs pairs Witten triples arbitrary quiver moduli problems are special cases of this universal classification problem Our Kobayashi Hitchin correspondence relates the complex geometric concept polystable oriented holomorphic pair to the existence of a reduction solving a generalized Hermitian Einstein equation The proof is based on the Uhlenbeck Yau continuity method Using ideas from Donaldson theory we further introduce and investigate canonical Hermitian metrics on such moduli spaces We discuss in detail remarkable classes of moduli spaces in the non Kahlerian framework Oriented holomorphic structures Quot spaces oriented holomorphic pairs and oriented vortices non abelian Seiberg Witten monopoles **The Beilinson Complex and Canonical Rings of Irregular Surfaces** Alberto Canonaco, 2006 An important theorem by Beilinson describes the bounded derived category of coherent sheaves on  $\mathbb{P}^n$  yielding in particular a resolution of every coherent sheaf on  $\mathbb{P}^n$  in terms of the vector bundles  $\Omega^j(\mathbb{P}^n)$  for  $0 \leq j \leq n$  This theorem is here extended to weighted projective spaces To this purpose we consider instead of the usual category of coherent sheaves on  $\mathbb{P}^r$  the weighted projective space of weights  $r_0, \dots, r_n$  a suitable category of graded coherent sheaves the two categories are equivalent if and only if  $r_0 \cdots r_n = 1$  i e  $\mathbb{P}^r$  obtained by endowing  $\mathbb{P}^r$  with a natural graded structure sheaf The resulting graded ringed space  $\overline{\mathbb{P}^r}$  is an example of graded scheme in chapter 1 graded schemes are defined and studied in some greater generality than is needed in the rest of the work Then in chapter 2 we prove This weighted version of Beilinson's theorem is then applied in chapter 3 to prove a structure theorem for good birational weighted canonical projections of surfaces of general type i e for morphisms which are birational onto the image from a minimal surface of general type  $S$  into a 3 dimensional  $\mathbb{P}^r$  induced by 4 sections  $\sigma_i$  in  $H^0(S, \mathcal{O}_S(r_i))$  This is a generalization of a theorem by Catanese and Schreyer who treated the case of projections into  $\mathbb{P}^3$  and is mainly interesting for irregular surfaces since in the regular case a similar but simpler result due to Catanese was already known The theorem essentially states that giving a good birational weighted canonical projection is equivalent to giving a symmetric morphism of graded vector bundles on  $\overline{\mathbb{P}^r}$  satisfying some suitable conditions Such a morphism is then explicitly determined in chapter 4 for a family of surfaces with numerical invariant **Weil-Petersson**

**Metric on the Universal Teichmuller Space** Leon Armenovich Takhtadzhian, Lee-Peng Teo, 2006 In this memoir we prove that the universal Teichmuller space  $T_1$  carries a new structure of a complex Hilbert manifold and show that the connected component of the identity of  $T_1$  the Hilbert submanifold  $T_{0,1}$  is a topological group We define a Weil Petersson metric on  $T_1$  by Hilbert space inner products on tangent spaces compute its Riemann curvature tensor and show that  $T_1$  is a Kahler Einstein manifold with negative Ricci and sectional curvatures We introduce and compute Mumford Miller Morita characteristic forms for the vertical tangent bundle of the universal Teichmuller curve fibration over the universal Teichmuller space As an application we derive Wolpert curvature formulas for the finite dimensional Teichmuller spaces from the formulas for the universal Teichmuller space We study in detail the Hilbert manifold structure on  $T_{0,1}$  and characterize points on  $T_{0,1}$  in terms of Bers and pre Bers embeddings by proving that the Grunsky operators  $B_1$  and The results of this memoir were presented in our e prints Weil Petersson metric on the universal Teichmuller space I Curvature properties and Chern forms arXiv math CV 0312172 2003 and Weil Petersson metric on the universal Teichmuller space II Kahler potential and period mapping arXiv math CV 0406408 2004      Quasi-Ordinary Power Series and Their Zeta Functions Enrique Artal-Bartolo, 2005 Intends to prove the monodromy conjecture for the local Igusa zeta function of a quasi ordinary polynomial of arbitrary dimension defined over a number field In order to do it this title computes the local Denef Loeser motivic zeta function  $Z_{\text{DL}}(h, T)$  of a quasi ordinary power series  $h$  of arbitrary dimension      **The Complex Monge-Ampere Equation and Pluripotential Theory** Sławomir Kołodziej, 2005 We collect here results on the existence and stability of weak solutions of complex Monge Ampere equation proved by applying pluripotential theory methods and obtained in past three decades First we set the stage introducing basic concepts and theorems of pluripotential theory Then the Dirichlet problem for the complex Monge Ampere equation is studied The main goal is to give possibly detailed description of the nonnegative Borel measures which on the right hand side of the equation give rise to plurisubharmonic solutions satisfying additional requirements such as continuity boundedness or some weaker ones In the last part the methods of pluripotential theory are implemented to prove the existence and stability of weak solutions of the complex Monge Ampere equation on compact Kahler manifolds This is a generalization of the Calabi Yau theorem      A Random Tiling Model for Two Dimensional Electrostatics Mihai Ciucu, 2005 Studies the correlation of holes in random lozenge i e unit rhombus tilings of the triangular lattice This book analyzes the joint correlation of these triangular holes when their complement is tiled uniformly at random by lozenges      **An Algebraic Structure for Moufang Quadrangles** Tom de Medts, 2005 Features an article that intends to present a uniform algebraic structure for Moufang quadrangles and to classify these structures without referring back to the original Moufang quadrangles from which they arise thereby also giving a new proof for the classification of Moufang quadrangles which does consist of the division into these 2 parts      **Entropy Bounds and Isoperimetry** Serguei Germanovich Bobkov, B. Zegarlinski, 2005 In these memoirs Bobkov and Zegarlinski describe

interesting developments in infinite dimensional analysis that moved it away from experimental science Here they also describe Poincar type inequalities entropy and Orlicz spaces  $L^p$  and Hardy type inequalities on the line probability measures satisfying  $L^p$  inequalities on the real line expo

**III: Global Wildness and Tame-ness** Lee Klingler, Lawrence S. Levy, 2005 This memoir completes the series of papers beginning with KL1 KL2 showing that for a commutative noetherian ring  $\Lambda$  either the category of  $\Lambda$  modules of finite length has wild representation type or else we can describe the category of finitely generated  $\Lambda$  modules including their direct sum relations and local global relations There is a possible exception to our results involving characteristic 2
