with few or often no textbooks that provide useful case studies or surveys on the implementation and effects of integrating information technologies in the organizations operations This is surprising since in most first world countries the public sector consumes a substantial part of the gross national product Even more astonishing is the vast amount of financial and organizational resources that are spent developing and implementing various information systems We decided to write this book to provide information for those studying information systems at business schools information and computer departments at collegesl universities and for those working hands on with EDI and data networking in public administration Thus our primary target groups for this book are professionals training MA courses computer science MBA MP A and political science EDI has been seen as a means to wire the various policy areas in the public sector Those included are not limited strictly to the public organizations but extend to their trade partners Also government has sought ways to stimulate the usage of ED I in the private sector beyond those transactions involving direct communication with the public sector In this book we have contributors from eight countries and a total of 14 chapters reporting on issues of importance when developing and implementing EDI when government wants to stimulate the diffusion of EDI in society and when organizations want to address the impact of their investments in ED

Internet Multimedia Communications Using SIP Rogelio Martinez Perea, 2008-02-27 Session

Initiation Protocol SIP was conceived in 1996 as a signaling protocol for inviting users to multimedia conferences. With this development, the next big Internet revolution silently started. That was the revolution which would end up converting the Internet into a total communication system which would allow people to talk to each other, see each other, work collaboratively or send messages in real time. Internet telephony and, in general, Internet multimedia is the new revolution today, and SIP is the key protocol which allows this revolution to grow. The book explains in tutorial fashion the underlying technologies that enable real time IP multimedia communication services in the Internet: voice, video, presence, instant messaging, online picture sharing, white boarding, etc. Focus is on session initiation protocol SIP, but also covers session description protocol SDP, Real time transport protocol RTP, and message session relay protocol MSRP. In addition, it will also touch on other application related protocols and refer to the latest research work in IETF and 3GPP about these topics. 3GPP stands for third generation partnership project, which is a collaboration agreement between ETSI Europe, ARIB TTC Japan, CCSA China, ATIS North America, and TTA South Korea. The book includes discussion of leading edge theory, which is key to really understanding the technology, accompanied by Java examples that illustrate the theoretical concepts. Throughout the book, in addition to the code snippets, the reader is guided to build a simple but functional IP soft phone, therefore demonstrating the theory with practical examples. This book covers IP multimedia from both a theoretical and practical point of view, focusing on letting the reader understand the concepts and put them into practice using Java. It includes lots of drawings, protocol diagrams, UML sequence diagrams, and code snippets that allow the reader to rapidly understand the concepts. Focus on HOW multimedia communications over the Internet work, to allow readers to really understand and implement the technology. Explains how SIP works, including many programming examples, so the reader can understand abstract concepts like SIP dialogs, SIP transactions, etc. It is not focused on just VoIP. It looks at a wide array of enhanced communication services related to SIP, enabling the reader to put this technology into practice. Includes nearly 100 references to the latest standards and working group activities in the IETF, bringing the reader completely up to date. Provides a step by step tutorial on how to build a basic, though functional, IP soft phone, allowing the reader to put concepts into practice. For advanced readers, the book also explains how to build a SIP proxy and a SIP registrar to enhance one's expertise and marketability in this fast moving area.
