Ice Structure Interaction Iutam Iahr Symposium St Johns Newfoundland Canada 1989:

Ice-Structure Interaction Stephen J. Jones, Richard F. McKenna, Joy Tillotson, Ian J. Jordaan, 2012-12-06 IUTAM IAHR Symposium on Ice Structure Interaction Professor Bez Tabarrok Chairman of the Canadian National Committee CNC of the International Union of Theoretical and Applied Mechanics IUTAM invited Professor Derek Muggeridge to organize a symposium on ice structure interaction Dr Muggeridge readily agreed and prepared a proposal that was endorsed by the CNC and presented to the General Assembly Meeting of IUTAM for their consideration This Assembly gave its approval and provided the local organizing committee with the names of individuals who were willing to serve on the Scientific Committee Dr Muggeridge became chairman of this committee and Dr Ian Jordaan became co chairman of this committee as well as chairman of the local organizing committee The symposium followed the very successful previous meeting chaired by Professor P Tryde in Copenhagen by ten years Both symposia utilized Springer Verlag to publish their proceedings The Faculty of Engineering and Applied Science at Memorial University of Newfoundland were particularly pleased to host this prestigious symposium as it marked the twentieth anniversary of its Ocean Engineering Research Centre *Arctic Research of the United States*, 1987 *The Story of Offshore Arctic Engineering* Dan Masterson, 2018-10-29 In the early 1970s new technology was needed to aid in coal oil and gas exploration in the High Arctic in order to see if ice sheets could provide a perfect structural support for roadways airstrips and drilling platforms housing hundreds of workers However little engineering experience was available in this regard This book uniquely relates the human history and the technical innovations developed in this harsh environment through research testing and applying many existing engineering principles to ice structure analysis It offers essential insights into the history of ice engineering for designers university educators and postgraduate students While other studies detail research and testing in the laboratory this text relates the testing development construction and use of ice in real construction conditions **Recent Advances in Fracture Mechanics** W.G. Knauss, R.A. Schapery, 2013-06-29 The papers in this volume represent a considerable cross section of the field of fracture mechanics a testimony to the breadth of interest that Mel and Max Williams friends share with them Several are expanded versions of papers that were given in special sessions honoring them at the 1997 Ninth International Conference on Fracture Mechanics in Sydney Australia The subjects treated in this volume can be classified as follows dynamic fracture problems as viewed primarily from a classical continuum point of view analysis of relatively general crack geometries fracture problems of polymers and other relatively ductile materials scaling rules that allow extension of results obtained at one size to be translated into behavior at different size scales problems dealing with interactions that produce complex stress fields fracture problems directly appropriate to composite materials analysis of stress concentrations in anisotropic elastic solids and the problem of cracks in thin plates bending This volume will be of interest to engineers and scientists working on all aspects of the physics and mechanics of fracture Engineering Physics of High-Temperature Materials Nirmal K.

Sinha, Shoma Sinha, 2022-02-15 **ENGINEERING PHYSICS OF HIGH TEMPERATURE MATERIALS** Discover a comprehensive exploration of high temperature materials written by leading materials scientists In *Engineering Physics of High Temperature Materials* Metals Ice Rocks and Ceramics distinguished researchers and authors Nirmal K Sinha and Shoma Sinha deliver a rigorous and wide ranging discussion of the behavior of different materials at high temperatures The book discusses a variety of physical phenomena from plate tectonics and polar sea ice to ice age and intraglacial depression and the postglacial rebound of Earth's crust stress relaxation at high temperatures and microstructure and crack enhanced Elasto Delayed Elastic Viscous EDEV models At a very high level *Engineering Physics of High Temperature Materials* EPHTM takes a multidisciplinary view of the behavior of materials at temperatures close to their melting point The volume particularly focuses on a powerful model called the Elasto Delayed Elastic Viscous EDEV model that can be used to study a variety of inorganic materials ranging from snow and ice metals including complex gas turbine engine materials as well as natural rocks and earth formations tectonic processes It demonstrates how knowledge gained in one field of study can have a strong impact on other fields *Engineering Physics of High Temperature Materials* will be of interest to a broad range of specialists including earth scientists volcanologists cryospheric and interdisciplinary climate scientists and solid earth geophysicists The book demonstrates that apparently dissimilar polycrystalline materials including metals alloys ice rocks ceramics and glassy materials all behave in a surprisingly similar way at high temperatures This similarity makes the information contained in the book valuable to all manner of physical scientists Readers will also benefit from the inclusion of A thorough introduction to the importance of a unified model of high temperature material behavior including high temperature deformation and the strength of materials An exploration of the nature of crystalline substances for engineering applications including basic materials classification solid state materials and general physical principles Discussions of forensic physical materialogy and test techniques and test systems Examinations of creep fundamentals including rheology and rheological terminology and phenomenological creep failure models Perfect for materials scientists metallurgists and glaciologists *Engineering Physics of High Temperature Materials* Metals Ice Rocks and Ceramics will also earn a place in the libraries of specialists in the nuclear chemical and aerospace industries with an interest in the physics and engineering of high temperature materials

Mechanics of Ice Failure Ian Jordaan, 2023-03-02 Featuring real world examples and practical methodology this rigorous text explores time dependence in the mechanics of ice Emphasizing use of full scale data and implementing risk based design methods mechanical theory is combined with design and modelling Readers will gain understanding of fundamental concepts and modern advances of ice mechanics and ice failure processes analysis of field data and use of probabilistic design methods with applications to the interaction of ships and offshore structures with thick ice features or icebergs The book highlights the use of viscoelastic theory including nonlinearity with stress and the effects of microstructural change in the mechanics of ice failure and fracture The methods of design focus on risk analysis with

emphasis on rational limit state principles and safety Full discussion of historical discoveries and modern advances including Hans Island Molikpak and others support up to date methods and models to make this an ideal resource for designers and researchers

Instabilities in alpine permafrost: strength and stiffness in a warming regime Yuko Yamamoto, 2014-08-20 Alpine permafrost exists at high altitude at lower latitudes such as in the Swiss Alps Accelerating climate change including rising mean annual air temperature and extreme rainfall conditions in alpine regions induces permafrost degradation The warming of permafrost causes accelerated creep of rock glaciers due to increased unfrozen water content and higher deformability of the ice phase Recently the development of deepening depressions has been observed in several rock glaciers in Switzerland and the changes in land surface characteristics and drainage systems may initiate slope instabilities in rock glaciers The main aim of this thesis is to characterise the strength and stiffness of alpine frozen soil in rock glaciers To this end the geotechnical response such as creep and failure of frozen soil was investigated through a triaxial stress path testing programme with novel measurement systems for detecting acoustic emissions and measuring volumetric change In addition the resistance to crack initiation and propagation was investigated through a beam bending test programme on rectangular artificially frozen soil specimens using the acoustic emission measurement system The evaluation of laboratory tests on artificially frozen soil specimens implied that the development of deep depressions in rock glaciers occurs through differential creep and thermal degradation and that the rate of deformation has the potential to lead to instabilities in rock glaciers A comparison of the simulation results with the experimental data demonstrated that the semi coupled model was successful in simulating the most important aspects of the temperature dependent stress strain relationship for the frozen soil behaviour that was measured at the element scale This thesis contributes to an understanding of the variations in geotechnical response of alpine permafrost by investigating the behaviour of artificially frozen soil specimens experimentally and numerically with time and temperature under specific stress paths However further investigations are necessary to assess the long term stability of rock glaciers affected by climate change
