From Simple Input To Complex Grammar:

From Simple Input to Complex Grammar James L. Morgan, 1986 This book explores a new and important hypothesis for how young children might be able to learn a language from very simple sentences

Sources of Variation in First Language Acquisition Maya Hickmann, Edy Veneziano, Harriet Jisa, 2018-02-22 Developmental research has long focused on regularities in language acquisition minimizing factors that might be responsible for variation Although researchers are now increasingly concerned with one or another of these factors this volume brings together research on three different sources of variation language specific properties the nature of the input to children across contexts and several aspects of the learners themselves Chapters explore these sources of variation within an interdisciplinary and comparative approach allaying theories and methodologies stemming from linguistics psycholinguistics developmental psychology and neuroscience The comparative perspective involves different languages contexts of use types of learners first second language acquisition monolingual bilingual learners autism language impairment as well as vocal and visuo gestural communicative modalities co verbal gestures sign language acquisition The volume points to the need to enhance interdisciplinary research using complementary methodologies to further examine sources of variation and to integrate variation into a more general developmental theory

The Handbook of Linguistics Mark Aronoff, Janie Rees-Miller, 2008-04-15 Presupposing no prior knowledge of linguistics The Handbook of Linguistics is the ideal resource for people who want to learn about the subject and its subdisciplines

New Directions in the Acquisition of Romance Languages João Costa, Alexandra Fiéis, Maria João Freitas, 2014-10-21 This book puts together a selection of papers presented at The Romance Turn V Workshop held in Lisbon in 2012 The papers presented at the workshop discussed general problems in the field of Language Acquisition with a special focus on data from several Romance varieties The papers in the volume cover a wide array of topics and subfields of acquisition studies including L1 and L2 acquisition typical and atypical development acquisition of syntax semantics and phonology

Language Processing and Language Acquisition Lyn Frazier, J. de Villiers, 2012-12-06 Studies of language acquisition have largely ignored processing principles and mechanisms Not surprisingly questions concerning the analysis of an informative linguistic input the potential evidence for grammatical parameter setting have also been ignored Especially in linguistic approaches to language acquisition the role of language processing has not been prominent With few exceptions e.g. Goodluck and Tavakolian 1982 Pinker 1984 discussions of language performance tend to arise only when experimental debris the artifact of some experiment needs to be cleared away Consequently language processing has been viewed as a collection of rather uninteresting performance factors obscuring the true object of interest namely grammar acquisition On those occasions when parsing strategies have been incorporated into accounts of language development they have often been discussed as vague preferences not open to rigorous analysis In principle however theories of language comprehension can and should be subjected to the same criteria of explicitness and explanatory power as other theories e.g. theories of grammar

Thus their peripheral role in accounts of language development may reflect accidental factors rather than any inherent fuzziness or irrelevance to the language acquisition problem. It seems probable that an explicit model of the way s processing routines are applied in acquisition would help solve some central problems of grammar acquisition since these routines regulate the application of grammatical knowledge to novel inputs.

The Development of Social Engagement Peter J. Marshall, Nathan A. Fox, 2006. The Development of Social Engagement edited by Peter J Marshall and Nathan A Fox brings together some of the latest research on social engagement processes across a range of life stages and species. The opening chapters provide overviews of cutting edge research on social engagement in areas such as temperament face processing joint attention language development and early social cognition in humans. Subsequent chapters address questions related to biological determinants of social systems play and maternal behavior across a variety of species as well as evolutionary issues associated with social engagement. Finally a number of chapters examine the application of rigorous biologically focused research paradigms to the study of atypical social engagement in children. Atypical social engagement is framed in terms of disorders such as autism and Williams Syndrome as well as in the effects of adverse early rearing environments such as institutions. This volume will be a valuable guide for those interested in a neurobiological approach to the study of social development. It provides an introduction to current research directions in this rapidly expanding field for both student and professional researchers in developmental psychology comparative psychology and developmental psychopathology.

Associative Learning For A Robot Intelligence John H Andraea, 1998-09-22. The explanation of brain functioning in terms of the association of ideas has been popular since the 17th century. Recently however the process of association has been dismissed as computationally inadequate by prominent cognitive scientists. In this book a sharper definition of the term association is used to revive the process by showing that associative learning can indeed be computationally powerful. Within an appropriate organization associative learning can be embodied in a robot to realize a human like intelligence which sets its own goals exhibits unique unformalizable behaviour and has no hidden homunculi. Some believe that artificial intelligence is undergoing a paradigm shift. There are undoubtedly several competing ideas and ideals. Neural networks and dynamic systems are offered as alternatives to the information processing and digital computer models of the brain. One is asked to decide between symbolic and subsymbolic between algorithmic and nonalgorithmic and between information processing and interactive systems. Even in the short distance travelled in this book associative learning is seen to embrace both sides of these dichotomies.

Cognitive Science Benjamin Martin Bly, David E. Rumelhart, 1999-10-18. The interdisciplinary field of cognitive science brings together elements of cognitive psychology mathematics perception and linguistics. Focusing on the main areas of exploration in this field today Cognitive Science presents comprehensive overviews of research findings and discusses new cross over areas of interest. Contributors represent the most senior and well established names in the field. This volume serves as a high level introduction with sufficient breadth to be a graduate level text and enough depth to be a

valued reference source to researchers Linguistic Categorization Roberta Corrigan, Fred R. Eckman, Michael P. Noonan, 1989-01-01 This volume contains a selection of the papers presented at the 16th International Symposium at the University of Wisconsin Milwaukee Two central questions were addressed What is the nature of the categories that underlie the structure of human language What is the nature of extralinguistic categories that are reflected in language These questions are addressed from the perspective of a variety of disciplines using many different methodologies and focusing on many different aspects of language including morphology syntax semantics phonology and discourse The volume is divided into 3 sections prototype effects in language categorization processes and cross linguistic categorization **Prosody and Parsing** Paul Warren, 1996 The papers in this special issue reflect an increase in research interest in the use of intonation and prosody in the processing of spoken sentences As more is learned about sentence processing and as increased attention is paid to the processing of the spoken language so researchers have begun to ask questions about the organizational principles of the spoken form This book covers a range of such questions of interest both to linguists and to psycholinguists It considers aspects of the linguistic characterization of prosody such as whether prosodic structures are themselves often ambiguous and in need of parsing It also includes studies of the use of prosody in the structural interpretation of sentences involving the relationship between intonational focus and sentence structure the role of prosody in structural disambiguation and the predictive use of prosody in determining the length of the current utterance Papers in the collection also consider the role of prosody in the early acquisition of grammar the lateralization of prosody in the brain and the extent to which prosody can be claimed to guide rather than support syntactic structural analysis **Second Language Learning and Language Teaching** Vivian Cook, 2013-11-26 The fourth edition of this classic textbook has been revised to reflect recent developments in language teaching and learning yet retains the basic structure and approach so popular with its readers Teaching and learning content has been updated particularly taking into account the rise of task based learning Conversational Analysis and social models of second language acquisition changes in national syllabuses and examinations and the increasing controversy over the role of the native speaker target Each chapter has been revised to stand alone enabling the text to be taught and studied out of sequence if preferred A set of focussing questions has also been added to each and further reading sections have been updated In addition icons appear throughout the text signalling where extra information summaries data lecture notes test batteries and more can be found on the author's accompanying website www.routledge.com/cw/cook Second Language Learning and Language Teaching remains the essential textbook for all student teachers of modern languages and TESOL as well as applied linguistics **Perceptual Development** Alan Slater, 1998 The aim of this book is both to reflect current knowledge of perceptual development and to point to some of the many questions that remain unanswered The study of perceptual development is now a sophisticated science The majority of the chapters tell a fascinating detective story the way in which infants perceive and understand the world as they develop Each of the major

sections is prefaced by introductory comments and the book will be useful for advanced undergraduates postgraduates researchers and other professionals who have an interest in early perceptual development and in infancy in general

Mind Bugs Kurt VanLehn,1990 As children acquire arithmetic skills they often develop bugs small local misconceptions that cause systematic errors Mind Bugs combines a novel cognitive simulation process with careful hypothesis testing to explore how mathematics students acquire procedural skills in instructional settings focusing in particular on these procedural misconceptions and what they reveal about the learning process

The Cradle of Knowledge Philip J. Kellman,Martha E. Arterberry,2000 In this comprehensive treatment of infant perception Philip Kellman and Martha Arterberry bring together work at multiple levels to produce a new picture of perception s origins

Making Space Nora Newcombe,Janellen Huttenlocher,2000 Argues for an interactionist approach to spatial development that incorporates and integrates essential insights of the Piaget Nativist and Vygotskyan approaches

Theory and Evidence Barbara Koslowski,1996 Koslowski boldly criticizes many of the currently classic studies and musters a compelling set of arguments backed by an exhaustive set of experiments carried out during the last decade

Current Issues in Developmental Psychology A.F. Kalverboer,M.L. Genta,J.B. Hopkins,1999-09-30 This volume contains a number of contributions which concern basic issues in the field of brain behavioural development in the human especially with regard to the young child They have been written by distinguished scientists active in this field who have all been participating in an Erasmus teachers exchange program entitled Biopsychology of Development ICP NL 3026 14 This volume is the product of this cooperation The book is intended for scientists in this and related fields as well as for graduate students and advanced undergraduates as a means of updating their knowledge about human brain behaviour development It offers a contemporary review methodologically and theoretically of some basic issues in early human brain behaviour development Attention is paid to normal development and also to deviance as exemplified by discussions on child abuse and on early development of preterms and children of deaf mothers For the title of the book we have chosen for the term Developmental Psychology with as a subtitle biopsychological perspectives in order to express our interest in the basic requirements in the organism for an optimal adaptation during ontogeny as well as in the mechanisms underlying maladaptive behaviour The term may indicate that we are not just focusing on higher brain functions which would be suggested by the term Developmental Neuropsychology Further it is meant to express our interest in the integrated study of normal and deviant development without a particular focus on abnormality which would be suggested by the term Developmental Psychopathology

Learnability and Cognition, new edition Steven Pinker,2013-05-24 A classic book about language acquisition and conceptual structure with a new preface by the author The Secret Life of Verbs Before Steven Pinker wrote bestsellers on language and human nature he wrote several technical monographs on language acquisition that have become classics in cognitive science Learnability and Cognition first published in 1989 brought together two big topics how do children learn

their mother tongue and how does the mind represent basic categories of meaning such as space time causality agency and goals The stage for this synthesis was set by the fact that when children learn a language they come to make surprisingly subtle distinctions pour water into the glass and fill the glass with water sound natural but pour the glass with water and fill water into the glass sound odd How can this happen given that children are not reliably corrected for uttering odd sentences and they don't just parrot back the correct ones they hear from their parents Pinker resolves this paradox with a theory of how children acquire the meaning and uses of verbs and explores that theory's implications for language thought and the relationship between them As Pinker writes in a new preface *The Secret Life of Verbs* the phenomena and ideas he explored in this book inspired his 2007 bestseller *The Stuff of Thought* Language as a Window into Human Nature These technical discussions he notes provide insight not just into language acquisition but into literary metaphor scientific understanding political discourse and even the conceptions of sexuality that go into obscenity

Language Creation and Language Change Michel DeGraff, 1999 Research on creolization language change and language acquisition has been converging toward a triangulation of the constraints along which grammatical systems develop within individual speakers and viewed externally across generations of speakers The originality of this volume is in its comparison of various sorts of language development from a number of linguistic theoretic and empirical perspectives using data from both speech and gestural modalities and from a diversity of acquisition environments In turn this comparison yields fresh insights on the mental bases of language creation The book is organized into five parts creolization and acquisition acquisition under exceptional circumstances language processing and syntactic change parameter setting in acquisition and through creolization and language change and a concluding part integrating the contributors' observations and proposals into a series of commentaries on the state of the art in our understanding of language development its role in creolization and diachrony and implications for linguistic theory Contributors Dany Adone Derek Bickerton Adrienne Bruyn Marie Coppola Michel DeGraff Viviane D'prez Alison Henry Judy Kegl David Lightfoot John S Lumsden Salikoko S Mufwene Pieter Muysken Elissa L Newport Luigi Rizzi Ian Roberts Ann Senghas Rex A Sprouse Denise Tangney Anne Vainikka Barbara S Vance Maaïke Verrips

The Music between Us Kathleen Marie Higgins, 2012-05-01 Higgins' love of music and cultural variety is evident throughout She writes in a relaxed accessible sophisticated style Highly recommended Choice From our first social bonding as infants to the funeral rites that mark our passing music plays an important role in our lives bringing us closer to one another In this book philosopher Kathleen Marie Higgins investigates this role examining the features of human perception that enable music's uncanny ability to provoke despite its myriad forms across continents and throughout centuries the sense of a shared human experience Drawing on disciplines such as philosophy psychology musicology linguistics and anthropology Higgins's richly researched study showcases the ways music is used in rituals education work and healing and as a source of security and perhaps most importantly joy By participating so integrally in such meaningful facets of society Higgins argues

music situates itself as one of the most fundamental bridges between people a truly cross cultural form of communication that can create solidarity across political divides Moving beyond the well worn takes on music s universality The Music between Us provides a new understanding of what it means to be musical and in turn human Those who like Higgins deeply love music actually know something about it have open minds and ears and are willing to look beyond the confines of Western aesthetics will find much to learn in The Music between Us Journal of Aesthetics and Art Criticism
