From The Hand Of Man Primitive And Preindustrial Technologies:

From the Hand of Man: Primitive and Preindustrial Technologies Robert F. G. Spier, 1970 **Conceptualizing Technological Change** Govindan Parayil, 2002 Technological change has been rightfully identified as the single most important factor for improving material well being Yet despite its centrality in our lives we seem to know very little about technology and how it develops and changes both spatially and temporally In this original and thoughtful book Govindan Parayil draws together current scholarship from disciplines ranging from history to economics to sociology as he develops a cohesive theory of technological change Drawing on a detailed case study of the Green Revolution in Indian agriculture Parayil convincingly argues that technological change is contingent upon the social historical process of knowledge change Thus he explores the policy implications of analyzing technological change as a problem solving activity An innovative contribution to the literature on technological change this ambitious book will also be valuable for those interested in such practical applications as understanding the process of technology transfer **An Introduction to the Sociology of Work and Occupations** Rudi Volti, 2011-10-11 In 15 chapters Rudi Volti succinctly but comprehensively covers the changes in the world of work encompassing everything from gathering and hunting to working in today s Information Age *The Evolution of Technology* George Basalla, 1989-02-24 This book presents an evolutionary theory of technological change based upon recent scholarship in the history of technology and upon relevant material drawn from economic history and anthropology It challenges the popular notion that technology advances by the efforts of a few heroic individuals who produce a series of revolutionary inventions owing little or nothing to the technological past Therefore the book s argument is shaped by analogies taken selectively from the theory of organic evolution and not from the theory and practice of political revolution Three themes appear and reappear with variations throughout the study The first is diversity an acknowledgment of the vast numbers of different kinds of made things artifacts that have long been available to humanity the second is necessity the belief that humans are driven to invent new artifacts in order to meet basic biological requirements such as food shelter and defense and the third is technological evolution an organic analogy that explains both the emergence of novel artifacts and their subsequent selection by society for incorporation into its material life without invoking either biological necessity or technological progress Although the book is not intended to provide a strict chronological account of the development of technology historical examples including many of the major achievements of Western technology the waterwheel the printing press the steam engine automobiles and trucks and the transistor are used extensively to support its theoretical framework The Evolution of Technology will be of interest to all readers seeking to learn how and why technology changes including both students and specialists in the history of technology and science **Evidence-Based Inquiries in Ethno-STEM Research** Iman C Chahine, Josef de Beer, 2021-01-01 The purpose of the edited volume is to provide an international lens to examine evidence based investigations in Ethno STEM research Ethno science Ethno technology Ethno engineering and Ethno

mathematics These themes grew out of multi national multi institutional and multi disciplinary efforts to preserve as well as epitomize the role that Indigenous Knowledge Systems IKS play in cognitive development and its vital contributions to successful and meaningful learning in conventional and non conventional contexts Principled by the Embodied Situated and Distributed Cognition ESDC this innovative book will provide evidence supporting the embeddedness of a thinking in acting model as a fundamental framework that explains and supports students acquisition of scientific knowledge So often western science curricula are experienced as irrelevant since it does not take cognizance of the daily experiences and world in which the learner finds himself This book takes a socio cultural look at IKS and applies research in neuroscience to make a case its incorporation in the STEM Science Technology Engineering and Mathematics classroom We use the Embodied Situated Distributed Cognition ESDC Model as conceptual framework in this book Although the value of IKS is often acknowledged in curriculum policy documents teachers are most often not trained in incorporating IK in the classroom Teachers lack of the necessary pedagogical content knowledge PCK in effectively incorporating IK in their classrooms is a tremendous problem internationally Another problem is that IK is often perceived as pseudo science and scholars advocating for the incorporation of IK in the school curriculum often do not contextualize their arguments within a convincing theoretical and conceptual framework

Tarascan Copper Metallurgy: A Multiapproach Perspective Blanca Estela Maldonado, 2018-10-31 A study which provides valuable insights into the nature of metal production and the development of technology and political economy in ancient Mesoamerica offering a contribution to general anthropological theories of the emergence of social complexity

The Magic of Technology Alf Hornborg, 2022-10-20 This book examines our understanding of technology and suggests that machines are counterfeit organisms that seem to replace human bodies but are ultimately means of displacing workloads and environmental loads beyond our horizon It emphasises that technology is not the politically neutral revelation of natural principles that we tend to think but largely a means of accumulating through physically asymmetric exchange the material means of harnessing natural forces to reinforce social relations of power Alf Hornborg reflects on how our cultural illusions about technology appeared in history and how they continue to stand in the way of visions for an equal and sustainable world He argues for a critical reconceptualisation of modern technology as an institution for redistributing human time resources and risks in world society The book highlights a need to think of world trade in other terms than money and raises fundamental questions about the role of human artifact relations in organising human societies It will be of interest to a range of scholars working in anthropology sociology economics development studies and the philosophy of technology CHOICE Outstanding Academic Title for 2023

Pastoralism and Socio-technological Transformations in Northern Benin Georges Djohy,2017 Pastoralists throughout Africa face increasing pressures In Benin governmental development policies and programmes in crop farming are changing power relations between herders and farmers to favour the latter How are the Fulani pastoralists responding to these threats to their existence Georges Djohy explores the dynamics in local use of natural resources and in inter ethnic relations resulting from development interventions He combines the approaches of science and technology studies looking at the co construction of society and technology and political ecology looking at the power relations shaping the dynamics of economic environmental and social change so as to throw light on the forces of marginalisation adaptation and innovation at work in northern Benin Having worked there for many years Djohy has been able to uncover gradual processes of socio technological change that are happening behind the scenes of agricultural development involving mechanisation herbicide use tree planting land registration and natural resource conservation He reveals how farmers are using these interventions as weapons in order to gain more rights over

larger areas of land in other words to support indigenous land grabbing from herders who had been using the land since decades for grazing He documents how the Fulani are innovating to ensure their survival e g by using new technologies for transport and communication developing new strategies of livestock feeding and herd movement and developing complementary sources of household income The Fulani are organising themselves from local to national level to provide technological and socio cultural services manage conflicts and gain a stronger political voice e g to be able to achieve demarcation of corridors for moving livestock through cultivated areas They even use non functioning mini dairies another example of development intervention to demonstrate their modernity and to open up other opportunities to transform their pastoral systems This book provides insights into normally hidden technical and social dynamics that are unexpected outcomes of development interventions
