From Newton's Sleep Joseph Vining, 2023-11-14 What the presence of law tells us about our beliefs our language and the world around us In a strikingly original work intended not only for practicing lawyers but for anyone interested in the modern dilemma of the loss of meaning Joseph Vining invites us to reconsider law as a unique form of thought inseparably connected to everything in

the world that makes up human identity Oliver Wendell Holmes asserted at the end of the nineteenth century that human law is ultimately a phenomenon in quantitative relations to its causes and effects and many have been left with an impression of law as a set of processes and rules Vining takes issue with this and with various reductionist attempts in scientific thought today to express the universe in a single mathematical description of forces as well as with post structuralist speculation that there are no valid truth claims and that human interaction can be reduced to analysis of power relationships Law he argues is an independent discourse not reducible to any other that exists only in human interaction and reflects continuing human worth Vining's search to reinstate the spiritual dimension in public discourse brings him head on with a wide array of powerful academic forces linguistics theory political science the new historicism and the traditional teaching of law This book consists of a collection of what Vining calls amplifications of the implied text of the law impressions commentaries vignettes poems and dialogues which illustrate aspects of conventional legal language and logic and the subjects legal practice regularly deals with such as promises death and crime Throughout we see that law reaches deeply into the way we know ourselves and other persons all of whom speak through law as law connects language to person and person to action The texts generated by legal method constitute the living record of social acquaintance and contest speaking across cultures and across centuries It is the close reading of legal texts and contexts Vining argues that provides the present source of the transcendental in modern secular life But unlike the other academic arts of interpretation law alone is directly connected with the most real the most particular and at the same time the most universal facts of social life From Newton's Sleep casts doubt on the certainties past and present and creates new grounds for skepticism and conviction The fragmentary form of the book mirrors its subject It is intended to be picked up and read as occasion allows by lawyers and anyone interested in law

Blindness and Enlightenment: An Essay Kate E. Tunstall,2011-08-18 Blindness and Enlightenment presents a reading and a new translation of Diderot's Letter on the Blind Diderot was the editor of the Encyclopédie that Trojan horse of Enlightenment ideas as well as a novelist playwright art critic and philosopher His Letter on the Blind of 1749 is essential reading for anyone interested in Enlightenment philosophy or eighteenth century literature because it contradicts a central assumption of Western literature and philosophy and of the Enlightenment in particular namely that moral and philosophical insight is dependent on seeing Kate Tunstall's essay guides the reader through the Letter its anecdotes ideas and its conversational mode of presenting them and it situates the Letter in relation both to the Encyclopédie and to a rich tradition of writing about and most importantly talking and listening to the blind The Soul of a University Chris Brink,2018-07-01

What is the role of a university in society In this innovative book Chris Brink offers the timely reminder that it should have social purpose as well as achieve academic excellence The current obsession with rankings and league tables has perpetuated inequality and is preventing social mobility This book shows how universities can and should respond to societal challenges and promote positive social change *From Newton's Laws To Einstein's Theory Of Relativity* Lizhi Fang,Y Q

Chu,1987-06-01 This book aims to introduce to the reader the main thread of development from Newton's laws to Einstein's theory of relativity Limited by its scope and avoiding as much as possible the use of mathematical apparatus the authors try to clarify the most fundamental ideas and concepts Both authors hold a deep reverence for Galileo and Einstein and this book is dedicated to these two great scientists **Ten Equations to Explain the Mysteries of Modern Astrophysics** Santhosh

Mathew,2019-06-15 This book introduces ten equations that transcend the boundaries of time and space It takes readers through a journey of self discovery where they will learn the history science and significance of these equations in the context of their lives Moreover the mathematical beauty of these equations is presented in a profoundly modest fashion to highlight the idea that equations are eternal but humans are transient Each chapter offers readers a sublime experience and provides insights into the laws of nature that address the ever expanding intricacy of our universe The history of humankind according to Franz Kafka is the instant between two strides taken by a traveler Therefore what remains eternal when we finish our journey on this tiny rocky planet is our deep desire to connect with everything else in this universe These equations capture the essence of that aspiration and remain everlasting while we continue our trivial human pursuits These equations

change the way we live and view the world and will outlast even the most enduring signs of our civilization They have the potential to take us from planet to planet and perhaps to make us a cosmic species They can destroy the last strand of DNA to terminate life as we know it and generate life again from the fundamental laws of nature While these equations remain intangible they can create a tangible world yet remain truly eternal [Summary of Stephen Hawking's A Brief History of Time](#) Everest Media,2022-03-20T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 The ancient Greek philosopher Aristotle believed that the earth was a round sphere rather than a flat plate He knew that eclipses of the moon were caused by the earth coming between the sun and the moon and that the North Star appeared lower in the sky when viewed in the south than it did in more northerly regions 2 Aristotle believed the earth was the center of the universe and that circular motion was the most perfect This idea was elaborated by Ptolemy in the second century AD into a complete cosmological model 3 The Ptolemaic model was a reasonably accurate system for predicting the positions of heavenly bodies in the sky However it made an assumption that the moon followed a path that sometimes brought it twice as close to the earth as at other times 4 The Copernican model got rid of Ptolemy's celestial spheres and with them the idea that the universe had a natural boundary Since fixed stars did not appear to change their positions apart from a rotation across the sky caused by the earth spinning on its axis it became natural to suppose that the fixed stars were objects like our sun but much farther away **Summary of Stephen Hawking's A Brief History of Time** Milkyway Media,2022-04-22 Please note This is a companion version not the original book Book Preview 1 The ancient Greek philosopher Aristotle believed that the earth was a round sphere rather than a flat plate He knew that eclipses of the moon were caused by the earth coming between the sun and the moon and that the North Star appeared lower in the sky when viewed in the south than it did in more northerly regions 2 Aristotle believed the earth was the center of the universe and that circular motion was the most perfect This idea was elaborated by Ptolemy in the second century AD into a complete cosmological model 3 The Ptolemaic model was a reasonably accurate system for predicting the positions of heavenly bodies in the sky However it made an assumption that the moon followed a path that sometimes brought it twice as close to the earth as at other times 4 The Copernican model got rid of Ptolemy's celestial spheres and with them the idea that the universe had a natural boundary Since fixed stars did not appear to change their positions apart from a rotation across the sky caused by the earth spinning on its axis it became natural to suppose that the fixed stars were objects like our sun but much farther away *The Ibis* ,1879 [Literature, Language, and the Rise of the Intellectual Disciplines in Britain, 1680-1820](#) Robin Valenza,2009-09-24 The divide between the sciences and the humanities which often seem to speak entirely different languages has its roots in the way intellectual disciplines developed in the long eighteenth century As various fields of study became defined and to some degree professionalized their ways of communicating evolved into an increasingly specialist vocabulary Chemists physicists philosophers and poets argued about whether their discourses should

become more and more specialised or whether they should aim to remain intelligible to the layperson In this interdisciplinary study Robin Valenza shows how Isaac Newton Samuel Johnson David Hume Adam Smith Samuel Taylor Coleridge and William Wordsworth invented new intellectual languages By offering a much needed account of the rise of the modern disciplines Robin Valenza shows why the sciences and humanities diverged so strongly and argues that literature has a special role in navigating between the languages of different areas of thought
