Tracking and Mapping of Spatiotemporal Quantities Using Unicellular Swarm Intelligence John Oyekan, 2015-12-18 The book discusses new algorithms capable of searching for tracking mapping and providing a visualization of invisible substances It reports on the realization of a bacterium inspired robotic controller that can be used by an agent to search for any environmental spatial function such as temperature or pollution Using the parameters of a mathematical model the book shows that it is possible to control the exploration exploitation and sensitivity of the agent This feature sets the work apart from the usual method of applying the bacterium behavior to robotic agents The book also discusses how a computationally tractable multi agent robotic controller was developed and used to track as well as provide a visual map of a spatio temporal distribution of a substance On the one hand this book provides biologists and ecologists with a basis to perform simulations related to how individual organisms respond to spatio temporal factors in their environment as well as predict and analyze the behavior of organisms at a population level On the other hand it offers robotic engineers practical and fresh insights into the development of computationally tractable algorithms for spatial exploratory and mapping robots It also allows a more general audience to gain an understanding of the design of computational intelligence algorithms for autonomous physical systems

Introducing Shareable Futures Where our future used to be we now face a massive debt The debt is national and measurable We in America spent two decades buying on credit We made promises we couldn't keep to buy cars houses vacations and plasma screens we couldn't afford When we defaulted the debt shifted upward to a government that had already been putting its wars and occupations on the global equivalent of plastic The debt is also environmental and abstract All this crap we bought on credit had to come out of the earth We've razed forests and eroded soil over fished the oceans and depleted fresh water and turned our bodies and environment into toxic waste dumps We took oil and coal out of the ground and turned it into smoke that has been trapping heat in the atmosphere In short we consumed like there was no tomorrow And as a result of the economic and environmental crises triggered by our multi decade spending spree tomorrow now seems to be shrinking to a little black dot To state the problem in the starkest most personal terms I look at my son and I try to imagine the future in which he will live and I can't do it I don't dare I don't believe that I am unique in feeling this way Too often when we now look to the future we face a Keep Out sign propped up by a combination of our own fear and anxiety This is another crisis one that is unfolding on the most intimate and the most public levels It's a crisis because we need futurity in the same way that we need air food and water other resources threatened by the forces of enclosure Not just any futurity but concepts of the future in which tomorrow is in some way better than today To put it another way We need to know that our actions in the present will count toward something will be meaningful Not just a future for our own damn selves but for the whole of the planet and humanity The future belongs to everyone or it should and indeed the future is much more difficult to enclose than other commons Anyone can access or use the future through the power of our imaginations That's one way of defining the commons anything that no one owns but everyone can access and use The Internet is a commons So are the oceans and our atmosphere The radio spectrum is a commons So are our streets and water delivery systems All of these things require intention and cooperation to maintain lest we use them up In other words all the commons need people to care about them They need cultivation So does the commons we call the future We don't cultivate the future with shovels or software the way we might tend other commons Instead we cultivate the commons of the future through stories The future is in fact just a collection of stories that we tell each other The more and the better stories we tell and the more people we tell them to the more we strengthen the commons of the future That's why Shareable net launched the Shareable Futures series where some of today's most visionary and accomplished literary futurists imagine futures where technology has changed the rules of ownership and access and people are able to share transportation living spaces lives dreams everything and anything These are futures in which we are

surviving and even thriving largely by learning to share our stuff The short stories and speculative essays of the Shareable Futures series are ultimately hopeful but they are not utopian propaganda our writers come from the perspective that the laws of social thermodynamics are impossible to escape Instead of utopia these stories give readers troubles and ambiguities vividly conceived characters and places compelling narratives and intelligent speculation We hope you ll enjoy them and enjoy them in the context of the other real life here and now stories we tell on Shareable net **Sonic the Hedgehog #185**
