Endothelial Mechanisms Of Vasomotor Control With Special Reference To Coronary Circulation:

Endothelial Mechanisms of Vasomotor Control H. Drexler, A.M. Zeiher, E. Bassenge, H. Just, 2012-12-06 In recent years we have witnessed a rapid expansion of our knowledge regarding the role of the endothelium in the control of vascular tone and organ perfusion in health and disease Physiology pharmacology and molecular biology have uncovered a wealth of information on structure and function of this heretofore largely neglected organ Clinical medicine is now called upon to define the clinical significance of these observations that imply the mechanisms of blood coagulation e.g. the interaction of thrombocytes with the endothelium vasomotor control and specifically the regulation of smooth muscle tone with consequences for vascular resistance and conductance and organ blood flow Finally metabolism of lipids with the everlasting problem of atherosclerosis is an important aspect In a second step implications regarding the improvement of current therapeutic concepts as well as the development of new modalities of pharmacotherapy will have to be discussed The topic addressed by the 1990 Gargellen Conference Endothelial Mechanisms of Vasomotor Control clearly is of interest for both basic scientists and clinicians It has been the aim of the organizers the Society for Cooperation in Medical Science SCMS with this and the previous symposia to foster and support both basic science and clinical research Research in medicine today shows two major directions of development on the one hand increasing involvement of the basic sciences and their methodology On the other hand statistical validation of concepts and therapeutic strategies in large scale population and multicenter studies *Cumulated Index Medicus*, 1996 *Current Catalog* National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965-70 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1992 **Vascular Innervation and Receptor Mechanisms** Rolf Uddman, 2012-12-02 Vascular Innervation and Receptor Mechanisms New Perspectives reviews the areas of structure function and pathophysiology of the circulatory system The text focuses on the role of neuropeptides and structural function of endothelium The book begins with a brief discussion on the background of autonomic and sensory nerves in the circulatory system which is provided in Chapter 1 Having established the basic studies in the circulatory system the book moves to the discussion on the analysis of peptidergic innervations and peptides in vascular control in various disorders The last part of the book features the clinical applications of neuropeptides perivascular peptides and vasoactive peptides in different diseases and regulation such as cardiovascular regulation hypertension congestive heart failure and migraine and cluster headache The text will be a good reference to both students and professionals in the fields of biology chemistry and medicine *Subject Guide to Books in Print*, 1997

Biomedical Index to PHS-supported Research: pt. A. Subject access A-H, 1992 **Pan Vascular Medicine** Peter Lanzer, Eric J. Topol, 2013-12-20 The textbook provides an interdisciplinary and integrated perspective of modern vascular care Written by experts the text proceeds from fundamental principles to advanced concepts The book is divided into four parts each focusing on different basic concepts of vascular care All fundamental principles of the area are clearly explained

to facilitate vascular diagnostics and treatment in clinical practice It is aimed at junior practitioners and experts

Atherosclerosis, Large Arteries and Cardiovascular Risk Michel E. Safar, Edward D. Frohlich, J.S. Borer, 2007 Arterial stiffness is now firmly established as an important and independent predictor of cardiovascular risk The structural and functional changes of the large arteries may be age related but a number of conditions have been associated with accelerated arterial stiffening including the hypertensive diseases atherosclerosis end stage renal disease and traditional cardiovascular risk factors such as diabetes mellitus and smoking This book presents the current thinking of international experts regarding the underlying mechanisms of cardiovascular risk and the pathogenesis and pathophysiology of large arterial stiffness and reduced large arterial distensibility It not only gives new insights into the relationship between arterial stiffness and atherosclerosis but also establishes the possible interactions with age and other cardiovascular factors such as high blood pressure diabetes and hyperlipidemia Finally the therapeutic means of approaching arterial stiffness are analyzed in detail and new perspectives for the treatment and prevention of cardiovascular diseases are developed Authoritative and up to date this book is a valuable resource for basic scientists interested in vascular physiology and pathophysiology for clinicians in the areas of cardiology diabetes and renal diseases as well as for investigators in drug development *Research Grants Index*
