Polymers T.R Crompton, 2013-03-04 In recent years there has been an increasing demand for fire retardant versions of a range of plastics Such applications are fire retardancy in vehicles aircraft manned space vehicles marine and industrial applications such as electronics and a wide range of applications in the building industry including roofing and interior walls Also in domestic applications such as furniture clothes bedding upholstery and electrical goods Fire retardancy in polymers can be achieved by either of three ways Firstly there are forms of polymers such as polytetrafluoroethylene which are intrinsically fire retardant The second type are rendered fire retardant by the inclusion of a suitable additive in the formulation These include additives based on bromine antimony nitrogen phosphorus and silicon An essential requirement for fire retardant polymers used in enclosed spaces is that they do not release any toxic products upon combustion In this respect antimony containing additives are going out of favour due to the release of toxic antimony volatiles upon combustion Thirdly introduction of intumescence into polymers by the introduction of suitable compounds is being increasingly used as a means of imparting fire retardancy in polymers There exists a plethora of methods used to assess fire retardancy in polymers

Progress in Polymer Degradation and Stability Research Herbert W. Moeller, 2007-06-11 Polymer degradation is a change in the properties tensile strength colour shape etc of a polymer or polymer based product under the influence of one or more environmental factors such as heat light or chemicals These changes may be undesirable such as changes during use or desirable as in biodegradation or deliberately lowering the molecular weight of a polymer Such changes occur primarily because of the effect of these factors on the chemical composition of the polymer In a finished product such a change is to be prevented or delayed However the degradation process can be useful from the view points of understanding the structure of a polymer or recycling reusing the polymer waste to prevent or reduce environmental pollution Polymers molecules are very large on the molecular scale which derive their unique and useful properties from their size
