The Renewable Energy Transition John Erik Meyer,2019-10-18 Canada is a well endowed country that serves as an ideal model to lead the reader through the development of energy resources and society historically and into a post carbon future The book provides an historical perspective and describes the physical resource limitations energy budgets and climate realities that will determine the potential for any transition to renewable energy Political and social realities including jurisdiction and energy equality issues are addressed However we cannot simply mandate or legislate policies according to social and political aspirations Policies must comply with the realities of physical laws such as the energy return on investment EROI for fossil fuel based and renewable energy systems EROI is discussed in both historical terms and in reference to the greater efficiencies inherent in a distributed generation mainly electric post carbon society Meyer explores the often misleading concepts and terms that have become embedded in society and tend to dictate our policy making as well as the language social and personal goals and metrics that need to change before the physical transition can begin at the required scale This book also reviews what nations have been doing thus far in terms of renewables including the successes and failures in Canada and across the globe Ontario s green energy fiasco and a comparison of the different circumstances of Norway and Alberta for example are covered as part of the author s comparison of a wide range of countries What are the achievements plans and problems that determine how well different countries are positioned to make the transition The transition path is complex and the tools we need to develop and the physical

infrastructure investments we need to make are daunting At some point in time Canada and Canadians like all nations will be living on 100% renewable energy Whether the social and technological level that endures sees us travelling to the stars or subsisting at a standard of living more similar to the pre fossil fuel era is far from certain The Athenaeum ,1860
