Energetics of Secretion Responses J.W.N. Akkerman, 2019-01-15 Provides a multidisciplinary approach to the study of energetics of secretion responses by combining the knowledge and expertise of leading authorities from various fields

Energetics of Secretion Responses, 1988 *Histamine and Histamine Antagonists* Börje Uvnäs, 2012-12-06 Together with the two previous volumes of the Handbook of Experimental Pharmacology on histamine and antihistamines the present publication yields a picture of a still rapidly developing field of research New techniques and new experimental approaches have brought us new knowledge and deeper insight into the biomedical significance of histamine even if many questions remain to be answered about the functional and medical implications of this old biogenic amine The present volume covers the progress in histamine research during the past two decades A significant chapter concerns techniques for histamine determination As the result of a consensus meeting in Munich in December 1988 a panel of eminent specialists arrived at common recommendations as to the usefulness of the available histamine assays for the most common experimental biomedical conditions The heterogeneity of mast cells with great differences in their reactivity to various stimuli has become apparent not only among species but also among the tissues of a species New information is presented about the mechanism of exocytosis The old questions about the role of histamine in the mechanism of gastric secretion and in cardiovascular and respiratory functions have been studied with new techniques and the role of H₁ and H₂ receptors discussed New observations have been made on the occurrence and possible functions of histaminergic neurons and histamine receptors in CNS where a new type of receptor the H₃ seems to be widely represented *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 *Diabetes and the Kidney* A. Heidland, K. M. Koch, E. Heidbreder, 1989-09-22 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1988

Stress: Neuroendocrinology and Neurobiology George Fink, 2016-12-15 *Stress Neuroendocrinology and Neurobiology Handbook of Stress Series Volume 2* focuses on neuroendocrinology the discipline that deals with the way that the brain controls hormonal secretion and in turn the way that hormones control the brain There have been significant advances in our understanding of neuroendocrine molecular and epigenetic mechanisms especially in the way in which stress induced hormonal and neurochemical changes affect brain plasticity neuronal connectivity and synaptic function The book features the topic of epigenetics and how it enables stress and other external factors to affect genetic transmission and expression without changes in DNA sequence Integrated closely with new behavioral findings and relevance to human disorders the concepts and data in this volume offer the reader cutting edge information on the neuroendocrinology of stress Volume 2 is of prime interest to neuroscientists clinicians researchers academics and graduate students in neuroendocrinology neuroscience biomedicine endocrinology psychology psychiatry and in some areas of the social sciences including stress and its management in the workplace Includes chapters that offer impressive scope with topics addressing the

GTPases in Biology II ,2012-12-06 Recent advances in molecular biology have shown GTPases and phosphoproteins to be the paramount molecular switches utilized intracellularly in biological systems The origins of the GTPase switch appear to be almost as ancient as life it self and through evolution nature has adapted this switch to a variety of purposes In this two volume work a broad survey of the major classes of GTPases is presented The role of GTPases in ensuring accuracy during protein translation a new look at the trimeric G protein cycle the molecular function of ARF in vesicle coating the emerging role of the dynamin family in vesicle transfer GTPases which activate GTPases during nascent protein translocation and the many roles of ras related proteins in growth cytoskeletal polymerization and vesicle transfer are all described in 80 chapters by the leading authorities in their fields Both detailed knowledge of specific systems or proteins and general principles of structure and function are offered Much of this information has never been published before At the rate the extended family of GTPases is growing it becomes increasingly unlikely that we will again get it to sit for a group portrait such as this Therefore the volume has the chance to become the reference work for GTPases
