Engineers Of Independence:

Engineers of Independence Paul K. Walker, 1981 Engineers of Independence Paul K. Walker, 2002-08 This collection of documents including many previously unpublished details the role of the Army engineers in the American Revolution. Lacking trained military engineers the Americans relied heavily on foreign officers mostly from France for sorely needed technical assistance. Native Americans joined the foreign engineer officers to plan and carry out offensive and defensive operations, direct the erection of fortifications, map vital terrain and lay out encampments. During the war Congress created the Corps of Engineers with three companies of engineer troops as well as a separate geographer's department to assist the engineers with mapping. Both General George Washington and Major General Louis Leb que Duportail, his third and longest serving Chief Engineer, recognized the disadvantages of relying on foreign powers to fill the Army's crucial need for engineers. America they contended must train its own engineers for the future. Accordingly at the war's end they suggested maintaining a peacetime engineering establishment and creating a military academy. However Congress rejected the proposals and the Corps of Engineers and its companies of sappers and miners mustered out of service. Eleven years passed before Congress authorized a new establishment, the Corps of Artillerists and Engineers. Engineers of Independence : Paul K. WALKER, 1985 **Engineers of independence** Paul K. Walker, 1981 A Scientific Way of War Ian C. Hope, 2015-08 While faith in the Enlightenment was waning elsewhere by 1850 at the United States Military Academy at West Point and in the minds of academy graduates serving throughout the country Enlightenment thinking persisted, asserting that war was governable by a grand theory accessible through the study of military science. Officers of the regular army and instructors at the military academy and their political superiors all believed strongly in the possibility of acquiring a perfect knowledge of war through the proper curriculum. A Scientific Way of War analyzes how the doctrine of military science evolved from teaching specific Napoleonic applications to embracing subjects that were useful for war in North America. Drawing from a wide array of materials Ian C Hope refutes earlier charges of a lack of professionalization in the antebellum American army and an overreliance on the teachings of Swiss military theorist Antoine de Jomini. Instead Hope shows that inculcation in West Point's American military curriculum eventually came to provide the army with an officer corps that shared a common doctrine and common skill in military problem solving. The proliferation of military science ensured that on the eve of the Civil War there existed a distinctly American and scientific way of war. Washington's Engineer Norman Desmarais, 2021-03-16 The French were the archenemies of the British and her American colonies particularly after the French and Indian War which was begun by George Washington. So why did America look to the French as their principal ally in the American Revolution and why did General George Washington choose a Frenchman as his chief engineer? This biography of Louis Duportail, founder and first Commandant of the Army Corps of Engineers, begins by exploring those questions. It then explores the life of this man who is virtually unknown in America and less known in his

native France This is an unique biography about an overlooked even obscure French officer that was instrumental in the American cause for independence As a complete biography it covers his return to France and his service in the French army Cementing his role in the seminal events of the era readers will also learn of his problems under the Reign of Terror and his escape to the United States where he purchased a quite farm near Valley Forge It concludes with his unusual death at sea and the problems of settling his estate Duportail died in the greatest anonymity in the greatest indifference without earthly burial without military honors a dedicated monument to his glory in service to France or the United States and without intervention of his brothers in arms to honor and recall his memory Engineering Security Mark A. Thorough examination of the antebellum fortifications that formed the backbone of U S military defense during the National Period The system of coastal defenses built by the federal government after the War of 1812 was more than a series of forts standing guard over a watery frontier It was an integrated and comprehensive plan of national defense developed by the US Army Corps of Engineers and it represented the nation s first peacetime defense policy Known as the Third System since it replaced two earlier attempts it included coastal fortifications but also denoted the values of the society that created it The governing defense policy was one that combined permanent fortifications to defend seaports a national militia system and a small regular army The Third System remained the defense paradigm in the United States from 1816 to 1861 when the onset of the Civil War changed the standard In addition to providing the country with military security the system also provided the context for the ongoing discussion in Congress over national defense through annual congressional debates on military funding **Bulletin of the American Institute of Mining and Metallurgical Engineers** American Institute of Mining and Metallurgical Engineers,1917 Issues for 1905 1919 include papers published subsequently in revised form in the institute s Transactions Bulletin of the American Institute of Mining Engineers ,1917 The Kansas Engineer ,1922
