COLE, Simon A Cole, 2009-06-30 No two fingerprints are alike or so it goes For nearly a hundred years fingerprints have represented definitive proof of individual identity in our society We trust them to tell us who committed a crime whether a criminal record exists and how to resolve questions of disputed identity But in *Suspect Identities* Simon Cole reveals that the history of criminal identification is far murkier than we have been led to believe Cole traces the modern system of fingerprint identification to the nineteenth century bureaucratic state and its desire to track and control increasingly mobile diverse populations whose race or ethnicity made them suspect in the eyes of authorities In an intriguing history that

traverses the globe taking us to India Argentina France England and the United States Cole excavates the forgotten history of criminal identification from photography to exotic anthropometric systems based on measuring body parts from fingerprinting to DNA typing He reveals how fingerprinting ultimately won the trust of the public and the law only after a long battle against rival identification systems As we rush headlong into the era of genetic identification and as fingerprint errors are being exposed this history uncovers the fascinating interplay of our elusive individuality police and state power and the quest for scientific certainty Suspect Identities offers a necessary corrective to blind faith in the infallibility of technology and a compelling look at its role in defining each of us **Fundamentals of Forensic Science** Max M.

Houck, Jay A. Siegel, 2009-11-30 Fundamentals of Forensic Science Second Edition provides an introduction to the basic principles of forensic science The book begins at a crime scene and ends in the courtroom The book is divided into six parts Part 1 provides an overview of criminal justice and forensic science covering the basics of crime scene investigation and the nature of evidence Part 2 discusses analytical tools including microscopy Raman spectroscopy mass spectrometry atomic spectroscopy and separation methods Parts 3 to 5 discuss the various types of forensic evidence collected categorized by the types of science employed in their analysis physical science chemical science and biological science These include pathology anthropology and odontology entomology serology and bloodstain pattern analysis DNA analysis forensic hair examinations forensic toxicology fiber and paint analysis friction ridge examination and firearms and tool marks Part 6 discusses the legal aspects of forensic science The book is written for students with a background in basic science and it can be used in a one semester or two semester format Vivid full color illustrations that diagram key concepts and depict evidence encountered in the field Straightforward unit organization that includes key terms numerous feature boxes emphasizing Internet resources historical events in forensic science practical issues in laboratory analysis and topics for further reading Effective pedagogy including end of chapter questions paired with a clear writing style makes this an invaluable resource for professors and students of forensic science
